IT is so seldom that we hear a voice from the preparatory schools that we welcome an article by Mr. J. S. Norman in the *National Review*. Mr. Norman runs full tilt against Latin. For the non-literary boy he believes it to be valueless. The accuracy it cultivates is of the kind which may very easily become mechanical. It may be a good gymnastic, but, in the hands of a competent teacher, other subjects are just as good. It is apt to stifle imagination, the development of which is the very soul of mental progress, and this because the difficulty of the language is so great that the learner's whole attention is focused on words and puzzling out complicated constructions. Mr. Norman's rejection of Latin is the more remarkable because he is himself a classical man. As a curriculum for young boys he suggests English literature (especially poetry, which needs real study), two modern languages, geography, English and European history, and elementary notions of mathematics and science. Certainly these things would give a liberal education, which is quite sufficient for all the ordinary purposes of life. They would supply the foundation needed for the studies which the liberal professions demand, the knowledge of the world in which we live, both the world of man and the world of Nature, which the citizen requires, and the appreciation of the æsthetic side of life which the human being needs for his recreation and refreshment.

"A Public School Master," writing in the *Manchester Guardian* of emigration and public-school boys, says:—"During the last fifteen years, out of 1,500 boys who have left the public school at which I am a master, not fifty have gone to Canada or Australia. Three or four times as many might have gone and England would not have missed them, whilst the colonies would have been the richer." The youths he would like to see go are those less well endowed with intellect than those who get into the Civil Service, &c., "but who possess grit and character, who can use their hands, but for whom a profession is often hard to choose, and, above all, let him be young." We heartily agree, but it is strange that a Public School Master should apparently never have heard of the emigration scheme originating with Dr. Gray of Bradfield, which has done good work, though on a limited scale, and provides easily the machinery needed for the work.

LOCAL AUTHORITIES.

THE Departmental Committee appointed to consider what changes, if any, should be made in the educational system as the consequence of the War is presumably another instance of adopting the alternative to doing something. The Committee is not a particularly convincing panel, and the only reassuring fact about it is that, if it does no good, it cannot possibly do any harm. It might have been imagined, however, that the Board of Education, with their innumerable experts and their Inspectors who are, or ought to be, familiar with every phase of educational development throughout the country, would themselves be capable of reviewing the present situation, and of suggesting what is necessary for the future. But perhaps the body responsible for the educational policy of the country does not feel equal to the unpopular task of reconsidering it. This view is shared by the Liverpool Education Committee, which has adopted the following resolution:—"That it is desirable in the national interest that a Committee should be appointed to consider and report upon the entire question of the organization of our educational system and its adaptation to the various needs of the nation, and that such Committee should be independent of any Government department."

FOR some years there has been a widespread belief that the system of elementary education in this country fails to achieve satisfactory results, and does not justify the increasing burden of its cost. It is not easy to determine whether there are substantial grounds for this belief. Compared, say, with twenty-five or thirty years ago, when public expenditure on the service was considerably less than a third of what it is to-day, no evidence is forthcoming to show that the products of the schools are better equipped than they used to be, either for industry or citizenship. On the other hand, it is, perhaps, asking too much to suppose that an entirely satisfactory national system of education can be evolved in a generation. But the melancholy fact remains that compulsory elementary schooling for nearly forty years appears to have failed to convince the majority of parents of its value or to render intellectual interests more popular. It has not promoted a love of learning.

THE defenders of elementary education, if they admit any defects in the system or disappointment with its results, will point to the inadequate salaries of teachers, the large classes, the eccentricities of H.M. Inspectors, and the withdrawal of so many children at the age of thirteen. Plausible arguments all of them, but not convincing when it is remembered that thirty years ago the teachers were not as well paid, the classes larger, the Inspectors quite as eccentric, and the proportion of children leaving at the age of thirteen greater. It follows, however, that, from the point of view of the professors, higher salaries, smaller classes, "trained and certificated" Inspectors, and a general extension in the age of com-

pulsory attendance will remedy all deficiencies and restore faith in the national system.

Preoccupation of Experts. The partial failure of the system of elementary education is largely due to our national habit of cherishing labels, of neglecting to define the objective, of reluctance to face the problem, or to adopt "clear cut" measures in the attempt to solve it. Other considerations invariably prevail. The elementary school, in its origin, had a very simple purpose, and by simple means more or less achieved it. To-day these schools, with an "enriched curriculum," "improved methods," and somewhat pretentious aims, produce results which are indefinite. The problem remains much the same as it was fifty years ago, but the professors and experts seem to ignore the social and economic conditions so vitally affecting the child, and to devote themselves to the task of exaggerating and elaborating pedagogic interests. Perhaps the most striking example of official and professional preoccupation is to be found in the fact that it was not until 1906 that it occurred to those responsible to make some inquiry into the physical condition of the children compulsorily brought together to be taught. Who can estimate the extent of the irreparable damage caused by this long neglect?

What becomes of the Child? THE School Medical Service, as it is called, while in many areas far from adequate, is a very obvious step in the right direction. It implies, one may suppose, that *the child*, and not merely how much and how far the professors can contrive to teach the child, is to be considered. Perhaps one of these days somebody else in authority will pause in the preparation of minutes and regulations and say, "I wonder what becomes of all those children who attend elementary schools, and whether 'the system' is really what they need, what their parents desire, and what is required by the nation?"

Education and Industry. IN a considerable number of schools, under present conditions, the children who attend after reaching the age of twelve or thirteen "mark time"; in a large number of schools there are many children who have no aptitude for "scholarship," and who must be destined to earn the means of livelihood by manual labour. The idea seems to be that for these children great advantage will accrue by the more general introduction of various forms of manual instruction into the school curriculum. The merits of learning by doing rather than by listening or reading are substantial, but it is pertinent to inquire whether the objects of those who favour this reform cannot, as far as children in elementary schools are concerned, be achieved in a better and less expensive way. It seems advisable to take a wider view of what constitutes the education of the rank and file, and to bring the school into closer relation with industry and employment. Instead of proposing to prolong the school life and to modify the curriculum in "technical" directions, it would be worth while to consider the possibility of establishing a partnership between the teacher and the employer in the education of the child. Where a boy has the opportunity of being trained for some specific industry, he might be released at the age of thirteen, provided his employer agreed to send him to school for half-time until he reached the age of fourteen or, if necessary, fifteen.

District Committees. THE policy favoured in some counties of appointing District Committees to act between the Local Education Authority and the managers of schools appears to be an unnecessary complication of administrative machinery. The Local Education Authority is permitted by the Board of Education to exercise very limited functions, but such as they are they properly concern the administrative area as a whole. School managers, on the other hand, are entrusted with all the responsibilities of detailed management, and the more intimately they are associated with the particular institution under their care the more efficient the work is likely to be. The interposition of a third body, which is not competent to exercise the powers of an Authority, and is not responsible for the management of particular schools, is obviously superfluous. If it does not diminish the interest of school managers, and hamper the Authority, it will probably occasion overlapping and duplication of work. The Cornwall County Council, it seems, is considering the abolition of District Committees, and at a recent meeting of the body which sits for St. Austell and St. Columb the members protested. One gentleman, however, said they should have much more executive power. They are doing the work which managers ought to do, and the managers were crying out. He would not like to see the Committee kept in existence on the lines of the past, because, from an educational point of view, things were not all that could be desired.

SCIENCE NOTES.

The "Wonder" Motive. WONDER and curiosity are strong in children when they begin school life. They were strong in Lord Kelvin unto the last day of his long life; in his case school did not interfere with his education in science. Are science masters satisfied that the wonder-motive is helped by school science? Or is there not some danger that formal instruction may have chilled enthusiasm instead of giving it deeper root and organized growth? For instance, when a school has a microscope, are its revelations open to the many, or reserved for a select band of senior pupils who can be trained dexterously to wield the scalpel and the razor? For our own part we delight in showing (under a low power) to children of ages from six to sixty the simple beauties of seeds and common objects of the garden, and to give glimpses of the Promised Land—Pisgah sights of the realm of science.

Wanted—Tyndall and Huxleys. MANY of our learned men of science lament the lack of popular interest in scientific matters, and lament not for commercial or military reasons only. Our school instruction has too often been so formal—possibly pedantically so—that it is difficult to get an audience for a scientific lecture, where thirty or forty years ago no such difficulty existed. However, an effort is being made to form a band of lecturers who, while in the front rank as investigators, have the art of popular exposition. It is not easy to train a Tyndall, or to harness a Huxley and a Helmholtz; we hope the British Association will take up this work, and thus fulfil one of its stated objects—viz. "to obtain more general attention for the objects of science."

The Third "R." CRITICIZING an examination syllabus a teacher writes:—"Considering the extent to which the children will use arithmetic after their school days, undue prominence is given to this subject. Those who will actually need arithmetic can specialize in that subject after deciding upon their career." The idea underlying this criticism is evidently that arithmetic is one of the three "R's" which are to be taught because everyone requires them as tools. It may at once be admitted that very little arithmetic is wanted by women; school methods of subtraction are not wanted for counting one's change, and in the draper's shop calculations are in pieces, yards, or simple fractions thereof. Hence the conclusion that arithmetic, at least for girls, can be cut down. But we deny the fundamental assumption that arithmetic is to be regarded solely as a necessary universal tool.

Why teach Arithmetic? ARITHMETIC must be regarded from the outset as a branch of mathematics. Prof. Whitehead has admirably defined school mathematics as a study having for its aim the revelation of the quantitative aspects of man's life and environment. If our arithmetic lessons help boys and girls to understand more of the quantitative relations which pervade the universe and affect our highest emotions and most mundane concerns, our teaching of arithmetic is justified, even though it helps little to count our change and check our accounts, and although ready-calculators will supply the rest of our computative needs.

Sound Signals at Sea. WIRELESS telegraphy has proved of enormous help to the mariner, yet simpler methods of estimating distance and direction during thick weather at sea will always be of value. Wireless requires somewhat large sending apparatus and the signals may be jammed. Prof. Joly has designed a method of signalling by sound which is simple in theory; we do not know how far practical success has been achieved. He proposes two sets of signals, one submarine, the other through air. If the two sets are begun simultaneously, the air group will lag behind the submarine by 4.3 seconds at a distance of a nautical mile. This is, of course, due to the velocity of sound being greater in water than in air. When the mariner hears the first submarine signal he notes the interval until the air signal reaches him. By regulating the ship's movements it might be possible to infer direction as well as distance.

A Voyage in Space. THE Christmas lectures for juveniles which Prof. H. H. Turner gave at the Royal Institution have now been issued in book form. Such apparently abstruse subjects as spectrum analysis, selenium photometers, the spectro-heliograph, and the recent discoveries relating to stellar clusters and movements, are brought within the scope

of a vivid and elementary book. The voyage is per telescope—Jules Verne would have arranged a more personal tour—but the story is told unconventionally and with fascination.

PROF. M. E. BERTRAND, of the Ecole d'Arts et Métiers d'Angers, is gravely concerned with the position of French industry. He points out that, in spite of varied efforts for the technical training of French youth, only 5 per cent. of the young people employed in industry and commerce attend technical schools; whilst after eighteen years of age only 65,000 attend adult courses, as compared with 500,000 in Germany. Where France spends seven million francs, Germany spends thirty millions from Imperial sources alone. (Lord Haldane told the British Science Guild a few years ago that Germany could show no evening classes to compare with those of England, but laid no stress on the fact that Germany preferred day classes.) Prof. Bertrand emphasizes the great value of the German continuation schools, which ensure compulsorily the attendance, within the usual hours of employment until eighteen years of age, of all those who have left the ordinary schools. Will the new Departmental Committee kindly take note of Prof. Bertrand's article, which appeared in the *Revue Générale des Sciences* of March 15?

SCHOOL GOVERNMENT.

II. THE MACHINERY.

By CHARLOTTE M. WATERS.

IN the previous article I sketched an outline of the new aim I would see substituted for the ideals at present existing in our schools. The proposed ideal is the all-round development of the individual and his definite training in communal life. I attempted to show where, and how far, our different types of schools fell short of this ideal and where they actually opposed it. I feel quite certain that many of my readers will agree whole-heartedly with the general principle, but will be shocked to find that I consider drastic reforms, so great as to amount to a revolution, are necessary before we even set out to achieve it. They will probably quarrel violently with me when I say that the bulk of our present schools neither develop half the powers of their pupils nor give any real training in corporate life. We do not develop because we stifle action; we impose from without what should grow from within.

First of all, the teacher's attitude must be completely reversed. He must believe, not merely give lip service to, the fundamental axiom that the child naturally turns to good, and not to evil, and he must add the postulate: "Let it be granted that a child can do most things best for himself." Starting with these two faiths, his teaching will soon contain less peptonized information and more intellectual activity; his discipline less and less of "Thou shalt not," and more and more "Do the thing that seems to you right," less "Do as I say," and more "Let us do it together." Such a teacher will give no order for which he is not prepared to give a reason—if not at the moment, at a later time. He may claim instant obedience, but he must be prepared to discuss the matter fully afterwards. Never will he resort to that most vicious refuge of the bully and the sentimentalist: "Do it because I order (or ask) it." A frank, fair, open relation between master and pupil is the only real basis for training. Given that, there will be mutual trust, and the old vicious enmity between authority and the pupil will vanish into thin air.

But, it will be said, there must be *some* authority—someone in the final resort has to decide what is allowable and what is not. True, of course; but why need the authority be entirely outside the child and the children? If you want to train the boy to discipline himself, what sense is there in dictating to him what he shall do or shall not do? Let the school be the authority, not the master; let it decree its own laws and see they are carried out. The master's

business is to guide, not to dictate. I conceive the position of the Head of such a school to be something like that of Pericles, who could not impose one petty by-law on the Athenian *demos*, and yet ruled them completely, while he educated them, for thirty years. For the machinery we go to the great public schools, but we modify it in one all important detail. The heart of the school, its supreme legislative and administrative body, will be the prefects, but they will be elected by the pupils, not nominated by the masters. I have no hesitation in saying that there are far fewer mistakes made by election than by nomination. In a school where the prefects were elected during ten years, making altogether some sixty to seventy elections, there was not one absolute mistake, and not more than two or three inadvisable selections. In one or two cases, where the Head exercised her power to nominate a girl refused by the school, she was invariably wrong. The thought and consideration put into these elections were surprising; still more so how little personal popularity swayed them. I remember only one case where such popularity carried to the head of the poll a girl who did not possess more than average qualifications for the work. Prefects thus elected have far more hold on the school than any nominee of the Head could possibly possess. They are obeyed more readily, for has not the school chosen them to be its leaders? They are relied upon and looked to for a lead in all emergencies. Obviously they must have power, and, on the administrative side, very wide power. The entire discipline outside the classroom can be given into their hands. The supervision of cloakrooms, playground, hall, &c., can be entirely passed over to them. They should have power to report, when necessary, persistent offenders, but they should be encouraged to deal with cases themselves, either singly or collectively at a full prefects' meeting. As a matter of fact, if the corporate life of the school is well developed, persistent offenders are rare and reports infrequent. On the legislative side no rules or customs should be promulgated except after full consultation with the prefect body, and, indeed, such a body as I have described will generally suggest all that is necessary. At least two meetings should be held each term, in which the Head and the prefects discuss the details of school arrangements, and plans are made to meet contingencies. The principle, of course, will be "no rules that can possibly be dispensed with," and it is wonderful how many can be dispensed with if the girls' ingenuity is set to work with that object. Practically the only rules necessary are those produced by the eccentricities of the building. In boys' schools, I think, the rules are not often unduly numerous, but, as things are at present, they are too often a challenge to the sportsman to defy or evade them. If none were made for which no reason was given, and all had the consent of the elected representatives of the school, the delight in evading them would be lessened and the sport prove somewhat tame.

Girls' schools, which are too often nothing but rules (a ghastly heritage from the time of Miss Pinkerton), would benefit enormously by a body of prefects. "Silence rules" would soon be as dead as the backboard; we should get rid of the worst feature of our girls' schools—the utter lack of training in initiative. The natural keenness of the adolescent to do things with gusto (and—may I add?—with noise) is stifled in what is, I believe, called training in gentleness and quiet behaviour. I know of one school in which the whole four hundred girls traversed stairs and corridors on tiptoe! There is no training in all this. To be silent because you are made to be does not teach control of speech; to creep quietly along corridors because you will be punished if you don't usually results in letting off steam somewhere. It is a training in self-control "to make a noise quietly"; it is none to be absolutely silent. Besides, rules and regulations bring deceit in their train. I knew a school where the discipline (so called) was of the most rigid order, and not a girl left that school, not even the most honourable, who had not acquired the art of talking easily and continuously without moving her lips! The argument is sometimes brought forward that you must have rules because children don't know

what things can be tolerated; many actions are not allowable in a large community that are harmless at home. But that is just where the "no-rule" training is so valuable; the pupil has to think. She cannot plead "I have broken no law," for she has broken the all-comprehensive one "Don't make yourself a nuisance." She learns to apply the great test of communal morality, "If everybody did this, could the community carry on?" Is not this a better training for the future than following a set of rules imposed by someone else, hardly one of which continues into her later life? Instead of a training in mechanical obedience she learns to obey the dictates of her reason and her heart, and these lessons she can continue throughout her life.

Of course, under such a regime there are no punishments; appeal is made, not to the lower instincts of fear and pleasure, but to the higher level of reason and civic duty. And the response never fails in the long run. A girl here and there may give trouble for a time; she never fails to come into line in the end. It is well to extend the system of responsibility, as far as possible, through the school, and form prefects, even among the babies of eight and ten, are a valuable help in driving the idea home. Societies, too, should be managed, as far as possible, by the girls and boys, just as the games are at the public schools.

One characteristic will be very evident in such a school—viz the power of initiative in its pupils—'Αρχὴ ἀνδρα δεῖξει. I have known a school, where the system had for years been followed, that on a sudden was faced with a crisis in which no lead could possibly be given by any mistress. In a quarter of an hour the prefects had decided on a line of action, had called the school together, and given their instructions, which were followed by the whole two hundred without a moment's hesitation. The same body of prefects, asked by the Head to see that order was maintained while the staff was called away to the staffroom, distributed themselves among the classrooms, and order and silence ruled throughout the building. In cases of accident there was no confusion; the prefect nearest took charge as a matter of course, and issued directions. And such training did not only affect a few girls at the top of the school. In the first place, the prefect body was large—about a dozen for a school of two hundred; then the form prefects had by no means a sinecure, and, as a form proceeded up the school, at least six out of the twenty-five would have this experience at one time or another. There were also the games captains of each form and the officers of the various societies (by no means all drawn from the senior forms).

Of course, the machinery would be no good without the spirit, but where the one and only standard is "each for all and all for each," such organization produces, I believe, the maximum of individual training with the maximum of public spirit. It is, however, a fundamental reversal of all that now obtains. For mechanical obedience we should have reasoned order for the public good; for a community of masters and pupils, one of comrades and leaders. Instead of competitive rivalry we should cultivate co-operative work for the commonweal, and the desire to do right would replace, as a motive, the fear to do wrong. Revolutionary though the proposal be, will it not seem to some worth the trial?

THERE is to be a "Shakespeare Day" at the Teachers' Guild, 9 Brunswick Square, W.C., on May 6, from 3 p.m. to 6 p.m. Prof. Foster Watson, D.Lit., is to lecture on "Shakespeare and Education," and there will be a program of songs, glees, dramatic recitals, &c., and an exhibition of maps, plans, and other matters connected with the life and times of Shakespeare. Some of these are for sale. Tickets, price 1s., which includes tea, may be obtained from the Teachers' Guild Office. There is also a meeting for conferring on "National Thrift" on May 19 at 5 p.m., and an excursion to Furzedown Training College on May 27 for London Centre members. Particulars of these meetings may be obtained from the Teachers' Guild Office.

A GREAT COLLEGE TUTOR.

THE late Master of Balliol, Dr. James Leigh Strachan-Davidson, who died suddenly on March 28, will be remembered by all that knew him as one of the most beautiful and gracious of men. His greatness to most of us in Oxford, and particularly in Balliol, seemed to lie not in his scholarship, though he was a very distinguished scholar, nor in his statesmanship, though his opinion counted for much in the University, but in more elusive qualities of personality. To the outside world who saw him in Common Room on Sunday nights, or heard him speaking in Convocation, he seemed made to adorn a dignified position and to preside over distinguished functions. Balliol men thought of him more as a great college tutor who gave himself wholeheartedly to his pupils. In educational matters he was a strong conservative, and held in kindly contempt all the principles of educational reform to which this journal is devoted. For that very reason, perhaps, it is worth while to try to appreciate his greatness as a teacher, for in education, if anywhere, the man is more than theories.

He was a tutor of Balliol for more than thirty years—more than three times as long as he was Master—and, as is the custom at Balliol, he continued to be a tutor after he was elected Master. He believed intensely in the tutorial system, and was more than a little scornful of anything else. Mere professors he pitied as men who were put in a position where they could not teach but only lecture. Research he approved of when it was done by men who were also tutoring. The cry of "endowment of research," he would say, was better described as "research for endowment." In considering the qualifications of a tutor the man for him was everything and his training little or nothing. That a man should need to be trained to teach he thought absurd; that every teacher should be forced to go through a course of professional training was a pestilential proposal. If a man had taken a good degree in Greats, he was, in his eyes, fit to teach anything. The right kind of man could always get up his subject.

He gave his whole life and thoughts to the College, and with him the interests of the College always came first. To that rule he made one glorious exception. For, in these late evil times, he would have gladly sacrificed even the College to the country. But in ordinary times his motto was, "Let us go our own way, and they ["they" being other colleges or the University or anyone outside] may do their damndest." It is significant of him that the one modern movement which won his whole-hearted support was the Tutorial class movement. He did not like some of its theories, but it stood for good tutorial teaching and was practical, and, for all his distrust of Trade Unions and his dislike of new-fangled economics, he not only supported it generously but spoke for it in Congregation and taught working-class students himself in the Summer School.

He was a conservative because he distrusted what he did not know. He was the most generous and optimistic of men to individuals, but pessimistic of theories and events. But if he was wrong in what he distrusted, he was right in what he believed. On his own ground he was unsurpassable. He had never any thought of self. He was devoted to the College and to his pupils and to all Balliol men. "You have a wife and family," he wrote once to one of his colleagues, "but I have only the College." He would fight hard for the interests of the College, but he would have never dreamt of fighting for himself. If he had been a smaller man he might have shown some resentment when he was not made Master after Jowett's death. He worked only more loyally for the College under its new Master.

The greatness of his teaching was the outcome of his personal qualities. He was a very distinguished Roman lawyer, who had vanquished Mommsen on his own ground. He had a delight in constitutional law, and his pupils sometimes learnt from him as much about the constitution of the

United States as about that of Rome. But what mattered with him was not what he taught, but how he taught it. His first principle was that a man should learn to recognize the difficulties of a subject or, as he put it, learn to ask the right questions and see the problems. "A man who begins with loose thinking," he once told a pupil at "handshaking," "will end with loose living." He taught men, above all things, to be relevant. He was a scholar through and through in his love of accuracy and his precision and in his love of what was best in all literature. He knew the classical works of English literature as few men did. If you started him anywhere in Dickens or Thackeray or Shakespeare he could always go on. He was a master of felicitous quotation.

He thought it the function of the College to train men "to serve God in Church and State," though his emphasis was always rather on "State," and he cared as much about the future careers of his pupils as about their intellectual attainments. He was a man of the world in the best sense of that term, and no man was a wiser or more loyal confidant. One of his most characteristic and frequent bits of advice was "always promise less than you think you will be able to give."

Much more might be said of his teaching; of his *séances*, when his pupils came three at a time and read their essays while the Master drank countless cups of tea and rolled and smoked cigarettes; of his "Aunt Sallies," as he called them, when men were encouraged to come and fire off questions, and of the enormous care he took in going over men's papers with them. It is fitting to end with a mention of his mere goodness and loveliness. All educational institutions, and not least colleges, are small worlds in themselves, where it is not always easy to differ without quarrelling. More educational work is spoiled by personal friction than is often realized. The Master and his colleagues did not always agree, but no one ever was like him in the grace of his differing. He was a good fighter; he did not give in when he met with difference of opinion. But he never wavered in his graciousness and good humour with any of his colleagues, however mistaken he might at times think their opinions. Differences never clouded his personal relations, and that is a thing that can be said of few men.

EDUCATION REFORM CONFERENCE.

SIR HENRY MIERS presided at a well attended Conference on Education Reform, which was held on April 8, by invitation of the Teachers' Guild Council, in the Library at 9 Brunswick Square. The audience was composed of persons who had done work of value in the various branches of education, together with a few who held high positions in the world of commerce. The main object of the meeting was to appoint an Education Reform Council, charged with the duty of investigating and reporting. A program of comprehensive research was approved, and authority was given to act, either alone, or where possible in co-operation with educational associations, or bodies having similar aims.

The CHAIRMAN (Sir Henry Miers, Vice-Chancellor of the University, Manchester) explained that the Conference did not indicate a desire on the part of the Teachers' Guild to force any particular opinions upon the teachers or the public, or to usurp the functions of other bodies, or to interfere in any way with them; but the Guild had developed a genius for organizing conferences, and the present was an endeavour to get together as wide a body of experience and knowledge as possible, and make it useful to the country. Other organizations are stirred by the present crisis to discuss educational problems—the January meetings, the British Science Guild, the Committee on the Neglect of Science, the correspondence in the *Times Educational Supplement* had directed public attention to such matters as Continuation schools, compulsory

secondary education, organization of expert knowledge, improvement of science teaching, and reform of Civil Service examinations. He himself thought that some of our difficulties are due to a national failing—viz. the reluctance to place responsibility, so that there is often a doubt as to who is the responsible person. This extends to educational matters—for example, as between the parent, the teacher, and the pupil; and the school child or even the University student may finish his career without really discovering the meaning of intellectual responsibility. The Conference could help with careful reports, and a program of the subjects proposed for these reports was put forward for discussion in order that the Conference may give a general lead to the Committees to be appointed to deal with them.

Sir ALBERT ROLLIT, LL.D., Litt.D., Ex-President of the London and Associated Chambers of Commerce, and Chairman of the Commercial Education Committee of the former, was asked to move the first resolution. He referred, as a member of the University of London, to the value of the educational leadership of its late Principal, the Chairman, and said he followed his example in being an ardent educationist, as he was in early life in the North, when he was a contributor to *Cassell's Popular Educator*, and since during twenty years in the House of Commons, where he found party politics and sectarianism to be the evil spirits opposed to practical legislation for the elementary and higher education of the people. Conference and organization were the levers of educational reform, which, real and practical, should be based not merely on theory, but on concrete experience and example. The great success of the London Chamber of Commerce in removing alien clerks from their City offices was one example of this; in accordance with the resolutions of a Conference presided over by his late friend, Sir John Gorst, then Minister of Education. English students were equipped with thorough general education, with science, and with foreign languages, which were the instruments of international intercourse, thus making commerce one of the most exacting of learned professions and callings. Another example was that of the Royal Horticultural Society, which had so organized the horticultural industry as to make it the premier one in Europe, and had also taken the initiative in the foundation of a diploma in practical horticulture. This led to the institution of science degrees in horticulture at the University of London, and to the acquirement of that knowledge which was the basis of modern business. The fundamental idea underlying all was that education shall make the best and the most of the individual, and qualify him or her for that fulfilment of private and public duty which was the chivalry of to-day.

In seconding the resolution, Miss CLEGHORN congratulated the Teachers' Guild on having called together such a representative Conference. It was realized by all how necessary it would be to reorganize, reform, and even revolutionize education at the conclusion of the War. Continuing, she said: At present, as far as elementary education is concerned, we are on the down-grade. The leaving age has been reduced, and thousands of boys and girls of twelve, thirteen, and even eleven years, have left the schools and are working either on munitions, on the land, or in some way taking the places of the men who are called up. We can now only deplore, but we must be prepared to restore to the children their rights at the earliest possible moment. On the other hand, the smaller children are being turned out of our schools to meet the stoppage of school building operations, and are, many of them, now being left to the tender mercy of the streets or the already busy but kind-hearted neighbour. School staffs are depleted, and unqualified people are being introduced into the schools. In this connexion, London has forgotten her traditions and is behind the provinces. The problems of the future are many—co-operation and co-ordination of effort are necessary—the leaving age must be raised, the training of teachers must be improved, and not only equality but variety of opportunity must be the keynote of progress in all classes of schools.

Dr. GARNETT moved the second resolution relating to the

program of Committee work, and advocated co-operation between the organizations already working at various sides of the problem. He pleaded for less specialization in the treatment of the curricula, which led to too great separation of the subjects. In some cases the specialization of the staff had been carried so far as to be detrimental to the pupils.

Mrs. CADBURY, in seconding the resolution, referred to the proposed Sub-Committee to deal with the extension of juvenile education. She instanced the arrangements made by certain employers to continue the education of boys and girls between the ages of fourteen and eighteen on entering their factory. In a week of approximately forty-eight working hours they are required to attend four hours at school. The subjects taught are: Boys—English, arithmetic and mathematics, practical geometry, geography (scientific or commercial), history (modern or industrial); girls—English, arithmetic (partly domestic), physiology, laws of health, sick nursing, care of infants, and, in some classes, industrial history (especially as affecting women), which are spread over the four years. Physical culture—including swimming, drilling, games, &c.—is taken throughout the course. When the War broke out, and the staffs of other departments were depleted, boys and girls who had gone through this course of training were able to pass examinations, and consequently take posts for which otherwise they would have been unfitted. Mrs. Cadbury also referred to the Medical Service Sub-Committee, and spoke of the complete arrangements now existing in Birmingham and some other large cities to the great advantage of the health of the school children, and of the need of further development in all towns and country districts.

The Rev. Dr. LYTTELTON supported the resolution.

Other speakers included Dr. Garnett, Miss Robertson (Christ's Hospital), Mr. Reynolds (Manchester), Prof. Gregory (British Science Guild), Mr. A. C. Coffin (Bradford), Prof. Whitehead, Dr. Rouse, the Rev. Canon Masterman, Mr. G. P. Dymond (Plymouth), and Mr. J. S. Thornton.

The following officers of the Council were appointed:—President, Sir Henry Miers; Vice-President, Prof. Gilbert Murray; Chairman of Council, Dr. William Garnett; Hon. Treasurer, Miss H. Busk; Hon. Secretary, Mr. G. F. Daniell.

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

If in England the inertia of Whitehall is a perpetual check to movement, abroad there is some activity to be observed. The United States is turning a critical eye on its secondary education. Of particular subjects history and modern languages are said to be ill taught. President Butler wrote in the *New York Times* last year: "Our secondary schools are particularly weak in general history and in English history and in practical instruction in French, Spanish, and German College admission examinations show that secondary school teaching in the modern European languages is painfully inefficient." A lack of ability to speak and write French and German is not compensated for, he says, by a superficial knowledge of French and German literature. An article in the *Educational Review* for March (li, 3, page 254) urges American teachers to adopt the direct method of instruction in modern languages. A recent publication of the General Education Board, New York, *Changes needed in American Secondary Education*, by Dr. Charles W. Eliot, is a plea for more sense-training in the schools, where the schemes are still too literary. American secondary education copied English models and were injuriously affected by Puritan influences. At present the young men admitted to American colleges can neither sing nor draw, and have no skill of eye, ear, or hand. Let us give Dr. Eliot's pregnant summary of proposed reforms: "The changes which ought to be made immediately in the programs of American secondary schools, in order to correct the glaring deficiencies of the present programs, are chiefly: the introduction of more hand, ear, and eye work—such as drawing, carpentry, turning, music, sewing, and cooking, and the giving of much more time to the sciences of observation—chemistry, physics, biology, and geography—not political, but geological and ethnographical geography. These sciences should be taught in the

most concrete manner possible—that is, in laboratories with ample experimenting done by the individual pupil with his own eyes and hands, and in the field through the pupil's own observation guided by expert leaders. In secondary schools situated in the country the elements of agriculture should have an important place in the program, and the pupils should all work in the school gardens and experimental plots, both individually and in co-operation with others. In city schools a manual training should be given which would prepare a boy for any one of many different trades, not by familiarizing him with the details of actual work in any trade, but by giving him an all-round bodily vigour, a nervous system capable of multiform co-ordinated efforts, a liking for doing his best in competition with mates, and a widely applicable skill of eye and hand. Again, to music should be given a substantial place in the time-table of every secondary school, in order that all the pupils may learn musical notation, and may get much practice in reading music and in singing. Drawing, both freehand and mechanical, should receive ample time in every secondary school; because it is an admirable mode of expression which supplements language and is often to be preferred to it, lies at the foundation of excellence in many arts and trades, affords simultaneously good training for both eye and hand, and gives much enjoyment throughout life to the possessor of even a moderate amount of skill."

To give effect to these proposals Dr. Eliot suggests that the time assigned to memory work and to mathematics should be somewhat reduced, that the school day should be lengthened, and the long summer vacation shortened. In some other matters he is quite modern. Every school plant, he contends, be it town or country, should be used not only by the regular pupils between eight and half-past four, but also by older youths and adults out of their working hours. *The efforts now being made to introduce continuation schools and to develop evening schools should become universal, and should speedily result in a large extension of the American public school system.* Observant of Germany, the United States is recognizing the value of *Fortbildung*, or continuation—the superiority of a people mainly trained to a people mainly untrained except by chance. Just as Rome was taught by vanquished Greece, there are matters in which Britain, after the War, may draw a lesson from Germany.

The recently opened Public High School of Commerce at Boston is an example of endeavour "to adjust public education to public needs," and represents "a new type of secondary school adjusted to the wants of modern commerce, viewed as a constructive science." Technological schools concerned themselves, for the most part, with the means of production; a study of problems of distribution, in other words, systematic education for commerce, was no less necessary. We in this journal have always maintained that with vocational training should be joined some measure of liberal education; Boston understands education for commerce to be an education that, whilst instructing those who follow it in the economics of distribution, imparts wide general culture. And the High School of Commerce is *general* in its aim—it seeks not to make a merchant, banker, or insurance agent, but to give a training and a body of knowledge useful in any form of commercial life.

At Washington, D.C., a Bureau of Commercial Economics has been doing the work of a Department of Public Instruction. It is an association of manufacturers, transport agents, &c., formed to disseminate geographical, commercial, and industrial knowledge by means of cinematography. Films are lent to Universities, colleges, technical and other schools, illustrating how things in common use are produced. Wherever they are exhibited admittance must be free.

FRANCE.

Modern-language teachers of the old type might or might not be learned in philology; they certainly were often unable to speak fluently the language that they affected to teach. To-day the Direct Method is more exacting, and the teacher in time of war is called on to perform the functions of an interpreter. The Minister of Public Instruction stated recently in the French Chamber that the number of teachers of English or German mobilized was 630, of whom 462 were previously employed in secondary schools and 168 in primary or in private schools. Of the total number, 151—133 from secondary and 18 from primary schools—were acting as interpreters, either in the zone of the armies or in the interior.

It was once a question in England whether the primary teacher might fitly become a primary inspector. New French regulations let him rise to be even an *inspecteur d'académie*. Hitherto the Minister, in appoint-

Practical Suggestions.

A new Institution at Boston.

Commercial Education by Pictures.

The Teacher as Interpreter.

Inspecteurs d'académie.

ing to the office, has chosen solely from the ranks of the secondary teachers. A new decree opens the *inspection académique* to heads of normal schools and to primary inspectors. But, as the *inspecteur d'académie* is in his district the head of secondary education, it is required that primaries who solicit the office shall possess the qualification that would enable them to teach in a *lycée* or *collège*—that is to say, the *licence*. No candidate will be delegated—an inspector must be *délégué* for two years before he is appointed a full *inspecteur d'académie*—unless he has gone through a probationary period of administrative work. If he belongs to higher or secondary education he must familiarize himself during that period with the business of primary education; if to primary, he must initiate himself in secondary education, and visit *lycées* and *collèges*. The Minister will nominate him a *délégué* only if the superiors who have seen him at work as probationer shall have awarded him a first certificate of aptitude; a full *inspecteur d'académie*, only if in his two years as *délégué* he has gained from them a second. Now, is not this French procedure all admirable? The demand for proper academic qualifications is there; but it is careful work and successful experience alone that exalt the teacher, primary or secondary, to the coveted *inspection académique*. We leave a possible comparison to our readers.

France is not so deeply absorbed in the War as to have forgotten her famous philosopher Malebranche, author of *De la recherche de la vérité* and a *Traité de morale*, who died in 1715, so that last year was the second centenary of his death-year. The quarterly *Education* (viii, 1) studies "The Ideas of Malebranche on Education." The apostle of Reason and enamoured of the rational sciences, he was the enemy of mere erudition. The true education, he maintained, is the education of the judgment—an education the more indispensable in that influences of all sorts acting on the child impair the power to judge; an education consequently severe and expecting little or nothing from the development of natural tendencies; an education which is not, however, an education by constraint, since its end is to prepare the mind to hear the voice of the "Maître intérieur"—the indwelling master, Reason.

Woman continues her advance in the field of education. On February 1 there was delivered at the Sorbonne, in the presence of a large audience, the opening lecture of a course on "Engraving in France in the Seventeenth Century," the lecturer being Mlle Duportal, the first lady to gain in France the *doctorat ès lettres*. About the same date the old Collège de France opened its doors for the first time to a woman—Mme Ioteyko, a Polish lady who, having studied at Paris, was teaching at Brussels when she was driven away by the Germans. As her subject she took "Fatigue in the biological aspect," and treated it with singular lucidity and precision.

RUSSIA.

Germany has long been disparaging Russia as barbaric, just as, with sinister intention, she has proclaimed England decadent. Certainly as to primary education, even the friends of Russia will admit the need for progress. In the country the petty aristocrats or landowners are often hostile to schools, and the teacher is, as a rule, a poor, depressed person. It is alleged that the "School Inspection" has hitherto treated the teachers as if they were serfs, even their private lives and opinions being subject to control. A Russian journal tells an illustrative story. In the Government of Viatka the superior of a certain teacher was displeased with him for wearing his hair too long—long hair in Russia, except among the priests, being regarded as indicative of advanced, if not revolutionary, views. When the teacher came to draw his salary, the official said: "First cut your hair; after that you shall have your money." Our Roundheads, the revolutionaries of their day, were close-cropped; it was the conservative Cavalier that wore flowing locks. Probably there is exaggeration in many of the stories that describe the oppression to which Russian teachers have been subject. To-day a new age opens, a new light is dawning. Most of the teachers are now serving either as soldiers or as nurses; they will bring back with them into the schools that spirit of exaltation which is already beginning to transform and reform Russia.

POLAND.

Noch ist Polen nicht verloren! There are nations who are "sitting on a fence." Poland resembles a tree between two hostile woodmen, and demands that it should be spared by both. Says a writer: "We shall always consider it a violation of our rights should foreign forms of government be thrust upon us, or should the living

body of Poland be again divided." The exact attitude of the Central Powers and of Russia towards this claim for independence, made by a country with a great past, and a population of more than twenty millions, is not clear. For the present the German hand bears strongly on Warsaw. The magnificent Orthodox church, erected by the Russians on the Place de Saxe in the heart of the city, has been converted into a Catholic church for Germans. In the field of education a new educational organization has taken the place of the old Commission of Instruction. A fear that this change was the beginning of an attempt to Germanize Polish education caused a certain amount of unrest among the students of the University of Warsaw, to allay which M. Brudzinski, the Rector of the University, issued an urgent appeal. He begged those who, ten years ago, fought with so much energy against the Russian University, not to forge weapons for the enemies of the Polish. Poland, mark you, asks neither for German nor for Russian culture, but for Polish. It is deplorable that many old castles and country houses belonging to noble families, with art treasures collected through many centuries, have been destroyed in the War: notably the castle of Count Mycielski in Boronice (Galicia) and that of Count Charles Lanckoronski in Rondole, where the great library, containing 20,000 volumes and a collection of 70,000 models, has been reduced to ashes. The reawakening of the nation may be a compensation for material losses.

CAPE OF GOOD HOPE.

The new requirements as to the use of Dutch by teachers involve the provision of instruction in the language. Thus the *Education Gazette* announces that during the forthcoming winter holidays a Vacation Course of Training in Dutch will be held at Port Elizabeth. Some knowledge of Dutch is assumed, and the aim will be to give teachers increased facility in the use of the language as a medium of instruction. The Education Authority will refund to the participators at the end of the course reasonable travelling expenses.

INDIA.

Indian Education (XIV, 8), surprises us. It tells us that the authors whom the Indians, not preparing for examination, love best are Reynolds and Mrs. Henry Wood. We quote without comment the judgment of the editor of the Indian journal upon Mrs. Henry Wood: "Mrs. Wood is one of the great novelists of the world, whether we regard her power of constructing a story, working up a climax, putting together dialogue, or depicting faithfully the characters and manners of the age in which she lived. Why is it that the literary critics ignore her? Simply because she is unaffectedly and sincerely religious. Had she been, like George Eliot, a solemn querist, the same critics would, on the same merits, have assigned her a very different place in the Temple of Fame. It is pleasant to think that, although the Universities of India cannot countenance her, she has readers and admirers in this country. We hope they may multiply." It is at least good that the Indians read what they like, not what someone thinks they ought to like.

A Selection from METHUEN'S LIST

Ready May 25.

A SENIOR EXPERIMENTAL CHEMISTRY.

By **A. E. Dunstan, D.Sc. (Lond.), and F. B. Thole, D.Sc.** With Diagrams and Illustrations. Crown 8vo, 5s. [*Textbooks of Science.*]

This volume is intended as a supplement to the author's well known textbooks, "Elementary Experimental Science" and "Elementary Experimental Chemistry." It will contain sufficient matter to provide for the remainder of a boy's school career, and will build up a sound development of modern chemical theory on the experimental foundation of his first two years' work.

Hints on French Syntax.

By **FRANCIS STORR, B.A. Camb.,** Officier d'Académie, Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission, University of London, &c., &c.

"A capital little book, which we have no hesitation in recommending to French students."—*The Pall Mall Gazette.*

"Mr. Storr's Hints are to the purpose. They are intended for schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing, or speaking may use them with advantage."—*The Athenaeum.*

Extract from Author's Preface.—At the request of several Masters and Mistresses, who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

Concise English Course**A PRACTICAL COMMERCIAL COURSE.**

It contains a concise outline of the principles of English Grammar: Combination, Expansion, and Condensing of Sentences; Choice of Words; Composition from English Models; Outlines of Essays; The Postal System; The International Character of the Postal System; The Postal Union; Business Correspondence; Précis Writing and Indexing.

112 pages. Cloth Boards. Price 1/-

Arithmetic and Accounts

The Course followed embraces a careful and comprehensive treatment of Business Arithmetic, as well as an introduction to the Principles and Practice of Book-keeping. From it pupils gain knowledge of principles on which accounts are kept—the objects of keeping accounts—the information to be derived from them when kept. It correlates with and reacts upon the arithmetic, and gives it a practical and truly vocational character. It saves time.

In Two Books. First and Second Year's Course.

Cloth Boards. Price 1/- With Answers, 1/4

Business Arithmetic

The Arithmetic of Practical Business Life, based on the requirements of the principal Examining Bodies that deal with Commercial Education. Profusion of examples.

Cloth Boards. Price 1/- With Answers, 1/4

Practical Book-keeping

A clearly set out and carefully planned Course, with numerous exercises at the end of each chapter.

Cloth Boards. Price 1/4

Gateways to Bookland

A New Series of Magnificently Illustrated books of Literary Extracts from Leading Authors. Nothing has been included which is not in itself good as literature, and which is not interesting to young readers. Suitable for Pupils from 8 to 16 years of age. The illustrations in Black and White and Colour are the works of leading artists of to-day or reproductions of the works of the Masters.

BOOKS OF THE SERIES.

A Wreath of Golden Blossoms	10d.
Old Time Treasures	1/-
Winged Flights into Storyland	1/3
Vistas of Romance	1/6
Within the Gates	1/7
In Kings' Gardens (ready soon)	1/8

Regional Geography**THE WORLD. A Scientific Treatment.**

Revised Edition. 240 pages. Including Appendix of Questions, Diagrams, &c. Many Contour Maps in Colour. On thoroughly modern lines. Cloth Boards. Price 1/3

Little Books of World History

In this Series the Compiler gives such glimpses of World History as may make clearer the meaning of British History.

Wars of the Cross. The Great Story of India. How Italy became a Nation. Belgium & Holland.

Each book contains from 80 to 112 pages.
Limp Cloth. Price 6d.

JOTTINGS.

FOR the encouragement of new writers the editor of the *Writers' and Artists' Yearbook* offers a prize of one hundred guineas for the best book of personal experiences during War time. It need not describe actual fighting-line adventures, but the War seen in any aspect at home or abroad.

It seems but a few months ago that we reported the resignation of Dr. Keeling, the venerable Head Master of Bradford Grammar School, and his sudden death at Southport on April 30 has followed all too soon. At the time we attempted to point out the singular

qualities that made Dr. Keeling an educational leader in the city of his adoption. He was an honoured contributor to the *Journal*, and no head master of our day has ruled so long and so wisely.

A RESEARCH Committee of the Society of Education has undertaken an inquiry the object of which is, by means of a *questionnaire*, to collect from adults information as to the ways in which they, as children, became aware of the facts of sex, birth, and parenthood. It is felt that a mass of such information, together with an expression of personal opinion upon the recognizable effect of such means of securing information, should provide considerable illumination of the problem of sex-education. Application for the *questionnaire* should be made to the Secretary of the Research Committee, Society of Education, 9 Brunswick Square, W.C.

It was a café in Cairo long before the War, and there arose a discussion as to the nationality of a certain European. "Mais il est Prussien," maintained the Frenchman, "et tellement Prussien que toutes les pendules s'arrêtent à son approche glacées de terreur."

HOUSE MISTRESS or GOVERNESS MATRON required in small home school, near London; elementary English subjects, arithmetic to Junior Cambridge (few hours' teaching daily); share supervision; care wardrobes, toilet; comfortable home; must have had similar experience; salary, £30 per annum and laundry; state age, &c.—Address H. G., 05385, *Morning Post* Office, Strand, W.C.

How touching is this faith in humanity, and in the feminine part of it! It ought to go some way to consoling Suffragettes, and even Suffragists, for the lack of the vote. All-round ability, devotion to duty, irrepressible enthusiasm for work, contempt for filthy lucre. We trust that the principal of the small, and probably very select, home school gives the governess matron "free" board and lodging during the holidays. We have known cases where all the salary had to be expended by a teacher awaiting the next earning shift.

CHILDREN of the Poor Law Home, Neasden Lane, Willesden.
(Continued on page 266.)

MAY 1916

MAY 1916 is a memorable month, for it is just three hundred years since Shakespeare died. Many plans are being made to celebrate this anniversary in a fitting manner, and schools will be paying special attention to the study of the poet's masterpieces. GINN & COMPANY have pleasure in announcing the publication of a new school edition of the plays. These are appearing under the title of

THE NEW HUDSON SHAKESPEARE

The Introduction and Notes are by the late HENRY N. HUDSON, LL.D., edited and revised by E. C. BLACK and A. J. GEORGE.

The text of this edition is based upon that of the First Folio—the "Merchant of Venice" presenting only six variants. The significant variant readings of the Quartos, Folios, and leading editions of the last two centuries are given as footnotes.

The introductory matter for the various plays remains essentially the same as written by Dr. HUDSON. It contains a history of each play, a discussion of the sources of the plot, paragraphs on the versification, and an analysis of the dramatic construction. A chronological chart is included in each volume, and an authentic facsimile of an important page of a Quarto, Folio, or source book.

The following volumes are now ready:—

As You Like It.
Hamlet.
Henry V.
Julius Caesar.

King Lear.
Macbeth.
Merchant of Venice.
Much Ado.

Midsummer Night's Dream.
Tempest.
Twelfth Night.

Other volumes are in preparation, and will be issued shortly.

This edition is printed on good paper, from clear type; the books are attractively bound in flexible blue cloth stamped with gold, and the price of each volume is **One Shilling and Sixpence.**

Teachers who are thinking of introducing a new play into their classes should write for a specimen copy.

GINN AND COMPANY,
ST. MARTIN'S STREET, LONDON, W.O.

DUSTLESS and HYGIENIC SCHOOLS

On all School, Laboratory, Library, &c., Floors and Linoleums of every description

USE FLORIGENE (Regd.)

During the EASTER VACATION for Best Results.

It is **IMPORTANT** to **NOTE** that **ONE APPLICATION** of "Florigene" **ALLAYS** the DUST and DIRT for **2 TO 12 MONTHS**, according to traffic, not only during each Sweeping (without sprinkling of any kind) but also throughout all the intervening periods—which is of greater hygienic importance. "Florigene" also saves time and labour, and is easily applied.

These sanitary, labour-saving, and economic advantages are NOT attained by sweeping-powders or any mechanical or other method.

THE ANNUAL

"DIRECTORY

OF

EDUCATIONAL ASSOCIATIONS"

will be found in the MARCH issue of the "THE JOURNAL OF EDUCATION," price sixpence, post free 7½d., a paper "indispensable to all school and college reading-rooms in these islands."—*Westminster Gazette*.

This "DIRECTORY," which extends over sixteen columns of the paper, has been corrected to date by responsible officials. It includes (a) number of members; (b) amount of annual subscription; (c) name of "organ"; (d) telegraphic address; (e) telephone number; (f) date and place of next annual meeting; (g) secretary's name and office address.

The *Journal of Education* for March contains as a Supplement *The Directory of Educational Associations*, which is now an annual publication. It is **one of the most useful returns published by any British educational journal.**

—*The London Teacher.*

London: **WILLIAM RICE, Junior, 3 Broadway, Ludgate Mill, E.C.**

wanted to do something for the soldiers at the nearest military hospital. The only thing they had to give was their Sunday allowance of cake; they carried it to the hospital. Perhaps those who enjoy an annual income of £100,000, and who are called on to pay income-tax to the tune of £41,529, will fix their attention on the remaining £58,471 and on the action of the Poor Law children. If we were a Guardian at Willesden, we could almost find it in our heart to move a resolution at the next Board meeting that a weekly penny be given to well behaved children.

THE War seems to have stimulated the *Music Student* to fresh activities rather than to have diminished them. The monographs on prominent musicians is a new and attractive feature for this year. In many and varied ways this journal is doing excellent work for music teachers, and it is always readable and interesting.

MESSRS. JARROLD & SON announce that they have sent nearly £1,000 to Mr. C. A. Pearson's Fund for the Hostel for Blinded Soldiers and Sailors at St. Dunstan's, Regent's Park, as the first proceeds of the sale of the *Blinded Soldiers and Sailors Gift Book*. The book is still on sale, and the need for funds for the good work is still urgent. We again commend the cause to our readers.

THE Civic and Moral Education League has made arrangements for a Summer School of Civics at Aberystwyth from August 5 to 19. The address of the Secretary is 6 York Buildings, Adelphi, W.C.

THE Uplands Association, which was founded last year, proposes to hold a Summer Meeting of a somewhat novel kind. Parents are to be invited to join with teachers in devoting part of their summer holiday to the study of education at Bangor. There are to be lectures for the adults and classes for the children, in which, we presume, the principles advocated in the lectures will be illustrated. The Normal school will be the head-quarters of the meeting, and names should be sent to the Secretaries at 25 Andover Road, Southsea, Hants.

THE Annual Service for Teachers will be held at St. Paul's at 6 p.m. on Thursday, June 1, Ascension Day. The preacher will be

Canon Nairne, D.D. The present conditions make it somewhat difficult to obtain sufficient men's voices for the volunteer choir, and the organist, Mr. Alan May, 31 Bonham Road, Brixton Hill, S.W., will be very glad to receive further offers from both tenors and basses on or before May 10. A few more sopranos and altos can also be admitted.

THE fourteenth Vacation term for Biblical Study will be held at Oxford from July 29 to August 12, the length of the course being reduced on account of the War. The Secretary is Miss E. Lawder, 25 Halifax Road, Cambridge.

A MUSICAL scholarship has been founded at Girton College by Miss Turle in memory of her father, the late James Turle, Organist at Westminster Abbey. The first award will be made next year.

ROLL OF HONOUR.—Captain A. N. C. Kittermaster, Worcestershire Regiment, Assistant Master and Commanding Officer of Training Corps at Dulwich College; Second Lieutenant B. J. Polack, Worcestershire Regiment, Assistant Master at Battersea Grammar School and son of the Rev. J. Polack, House Master at Clifton College; Second Lieutenant H. T. Almond, Gordon Highlanders, second son of the late H. H. Almond, of Loretto; Private F. W. Owen, Royal Fusiliers, attached Royal Engineers, son of the Rev. E. C. E. Owen, Assistant Master at Harrow School; Lieutenant K. R. Lewin, 7th Duke of Cornwall's Light Infantry, a distinguished biologist, at one time Lecturer at the Naples Biological Station; Second Lieutenant J. S. Morgan-Owen, South Wales Borderers, Senior Master at St. George's College, Quilmes, Buenos Ayres.

THE Summer Course of the Oxford School of Geography will be held at Oxford from August 3 to August 18.

SHAKESPEARE DAY is to be observed in the schools on May 3.

ONE member of the House of Commons was bold enough, during the debates of the Budget, to suggest to the Chancellor of the Exchequer a grant of £10,000,000 to improve English methods of education. He was Sir George Reid, a Canadian.

COMMERCIAL GEOGRAPHY

AN INTERMEDIATE TEXTBOOK

By ALEX. L. CURR, B.A. (Lond.)

SOMETIME LECTURER ON COMMERCE AND COMMERCIAL GEOGRAPHY IN THE QUEEN'S UNIVERSITY OF BELFAST.

Crown 8vo, cloth. Price 3/6. With 150 Maps and Diagrams.

This new textbook of Commercial Geography is expressly designed for use in senior classes of Secondary Schools and intermediate classes of Technical Colleges and Universities. Special prominence is given to the British Empire, and a fuller treatment than usual is accorded to "lands of to-morrow"—e.g., the Russian Empire and China. Leading political questions of the day in various countries are discussed in their bearing upon commercial development—e.g., the Panama Canal, the harvest congestion of Canadian railways, the Baghdad Railway, the policy of "A White Australia," &c.

BLACK'S TRAVEL PICTURES

Edited by ROBERT FINCH, F.R.G.S.

Each set contains 48 carefully selected pictures: 24 in colour from water colours painted on the spot, and 24 in black and white from photographs. Each set in a special detachable file portfolio.

Price 1/- per Set.

EUROPE.
ASIA.

MEDITERRANEAN REGION.
BRITISH ISLES.
COUNTRIES OF THE WAR.

BRITISH EMPIRE.
NORTH AMERICA.
AFRICA.

SOUTH AMERICA.
AUSTRALASIA.

Explanatory notes draw attention to the chief features of the pictures, and locate and explain the scenes. Questions and exercises on the pictures are provided. These are merely suggestive. Teachers will find in the pictures much more upon which they can base exercises of their own.

A specially drawn map on which each scene is definitely and clearly located by a simple device. Pictures are filed in a SPECIAL FILE so that each can be detached for examination; and are indexed so that each can instantly be restored to its place.

THE JOURNAL OF EDUCATION.

A MONTHLY RECORD AND REVIEW.

SCALE OF CHARGES FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page	£5 10 0	One Column [$\frac{1}{2}$ page]	£3 0 0
Half Column [$\frac{1}{4}$ page]	1 15 0	One-Eighth Page	0 17 6
Per Inch in Column, 8/-.			

SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—6d. per line; minimum charge, 5s.

Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d. *prepaid rate.*

Lectures, Classes, Non-Resident Posts, &c.—4s words for 3s.; each 8 words after, 6d.; *prepaid rate.*

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—
"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE, JUNIOR; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." *Postage stamps can only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page

LONDON:

WILLIAM RICE, JUNIOR, 3 BROADWAY, LUDGATE HILL, E.C.

FROUDE AND UTILITY IN EDUCATION.

By PROF. DARROCH.

ONE of the clearest and most explicit expositions of the doctrine of utility as applied to education was given by Froude, the historian, in his Rectorial Address to the students of the University of St. Andrews in the year 1869. The address is in striking contrast to that of his predecessor, John Stuart Mill, in the Rectorial Chair. Mill, although a utilitarian by profession, in his discussion of the aims and scope of a University education, goes far beyond the narrow limits of his particular school, and, in his concluding remarks, exhorts his hearers to keep constantly in mind the ultimate end from which University studies take their chief value—"that of making them more effective combatants in the great fight which never ceases to rage between good and evil," and more fit to cope "with the ever new problems which the changing course of human nature and human society present to be resolved."*

Interests of this nature, he declares, once established, tend to keep our higher faculties in exercise and may be considered as a store of mental capital, "to be freely expended in helping forward any mode which presents itself of making mankind in any respect wiser or better, or placing any portion of human affairs on a more sensible and rational footing than its existing one."†

But let us return to Froude. He begins by laying down the principle that, "to educate successfully, we should first ascertain clearly what we mean by an educated man."

* Rectorial Addresses, University of St. Andrews, 1863-1893.

† Ibid., page 77.

For, "in everything that we do, or mean to do, the first condition of success is that we understand clearly the result which we desire to produce."* What is true of the arts and crafts of life must also be true in education. Indefiniteness of aim must necessarily produce a like effect in the results of education. Now, our ancestors, whatever their other shortcomings, knew perfectly well what they meant by education, and they suited their means to their ends. "They set out with the principle that every child born into the world should be taught his duty to God and man." And since the majority of people had to live, as they always must, by bodily labour, therefore, every boy was apprenticed to some honest industry. "He was instructed in some positive calling, by which he could earn his bread and become a profitable member of the commonwealth."† In addition to this, but not independently, he was taught in the parish school to read, to write, and to cipher; or, if he showed any aptitude, he was made a scholar and trained for the ministry. Neither John Knox, nor any one else in these days, thought of what we call "enlarging the mind." In England, under somewhat different conditions, the aim was similar. In both countries, by industrial training, boys were put in the way of leading useful lives.

Further, in the education of the scholar, we find "the same principle otherwise applied." "Those whose studies added nothing to the material wealth of the world were taught to be content to be poor."‡ The laws of mendicancy were suspended in all countries in favour of scholars wandering in pursuit of knowledge. "The scholar was held in high honour, but his contributions were not appreciated in money, and were not rewarded with money. He went without what he could not produce that he might keep his independence and his self-respect unharmed."§ This was the old education, which formed the character of the English and Scottish nations. It is dying away at both extremities. The apprenticeship, as a system of instruction, is gone. The discipline of poverty, in England at least, is gone also, and we have got instead enlarged minds. We ask nowadays what ought to be the aim of education, and our "modern march of intellect man" answers: "The development and cultivation of the mind," and when we ask further wherein this cultivation consists, we are told that the cultivated man is he who knows something of the world in which he lives. "Education, according to this, means instruction in everything which human beings have done, thought, or discovered: all history, all languages, all sciences."||

But such an encyclopædic course can result only in cramming knowledge, in many cases valuable for no purpose beyond that of passing examinations—the securing of so much general knowledge—which means, as a rule, general ignorance. A similar criticism may also be passed against our elementary-school courses. "It is doubtful," Froude writes, "whether the honesty of the country has been improved by the substitution so generally of mental education for industrial, and the three R's, if no industrial training has gone along with them, are apt to produce a fourth 'R' of Rascaldom."¶

According to Froude, what is wrong with our present system of education is that we tend to over-emphasize mental cultivation—the production of a superficial alertness and quickness of mind due to the imparting of much knowledge, largely unassimilated and unapplied—and to underestimate the education and the training which have for their object the securing of the economic and industrial efficiency of the individual in after-life. Incidentally, in the course of his discussion of the aims of American education, he puts his finger on another defect of our system. Education, and especially the higher University education of our

time, is too frequently entered upon as a means of securing material advancement in life rather than with the aim of securing the instruction and training which may fit the individual to perform adequately and well the duties of his station in life. Moreover, he points out that this general education, which aims at nothing in particular, is often disastrous, since, if fortune changes, we often find the individuals so educated utterly unfitted to earn their own living.

Froude next goes on to consider the principles which ought at the present to guide education, and, in the first place, he considers the education of the people. He lays down, without qualification, the principle of our forefathers "that every boy born into the world should be put in the way of maintaining himself in honest independence." "No education which does not make this its first aim is worth anything at all." For "practical ability—the being able to do something, and not merely to answer questions—must still be the backbone of the education of every boy who has to earn his bread by manual labour."* The old apprenticeship system excellently fulfilled this condition. But this system has passed away, partly because it was abused for purposes of tyranny; partly because employers did not care to be burdened with boys whose labour was unprofitable; partly because it opened no road for exceptionally clever lads to rise to higher positions. But Froude, whilst he upholds the old apprenticeship system and whilst he condemns the mental cultivation idea of his time, gives us no guidance as to what should be substituted in its place.

The second principle which Froude lays down is that any further extension of knowledge should be connected with the particular work in which a boy is engaged, and that in every case "information should go along with practice," and "the man's work become more profitable while he himself becomes wiser." For, "every productive occupation which adds anything to the capital of mankind, if followed assiduously with a desire to understand everything connected with it, is an ascending stair, whose summit is nowhere, and from the successive steps of which the horizon of knowledge perpetually enlarges."† A similar principle has been laid down more recently by Kerchensteiner‡ in Germany, and by Dewey§ in America. The science, e.g., which a boy learns should be the science connected with his particular trade or occupation. For it is this which is of most use, and it is this knowledge which will most likely arouse his practical interest. But, whilst this principle is sound, it is one extremely difficult to carry into practice. For, in the first place, there are many occupations which are of a mechanical and routine character, and, having no basis of scientific knowledge behind them, as a consequence, furnish no incentive to further acquisition of knowledge. Stevedores, carters, and manual labourers of all kinds may be placed under this category. In the second place, on account of the great division of labour, many employments tend to become of a routine character, and the workers, in the majority of cases, have neither the intelligence nor the time to make themselves acquainted with the whole process, much less with the scientific foundations underlying the process. Further, even were it possible, by means of trade schools, to give instruction and training in the principles which underlie any productive art, it would appeal only to the intelligent few, and would benefit the others little.

Now, with the modern industrialization of society and its specialization of labour, more and more employments tend to become of this mechanical and routine character, and, as a consequence, the knowledge necessary for industrial efficiency is soon attained, and, as a further conse-

quence, all direct interest in its acquisition ceases. If, then, we are to continue to educate such persons, we must develop other interests, and interests outside of their particular trade or employment. The great extension of what may be called passive amusements in our own day is due to two causes—(1) many individuals have no growing interest in their daily work simply because it furnishes no opportunities for such development; and (2) no other interests having been established, their leisure time is spent in diversions. But Froude sees clearly that our interests arise out of our needs, and that the fundamental need of the very great majority of people is to earn their living, and that any education which tends to increase a man's power in this direction is the education which will make the strongest appeal to his nature.

Froude's criticisms are, therefore, aimed mainly at the conception that the object of education is supplying such or such miscellaneous information. "Detached facts," he writes, "on miscellaneous subjects, as they are taught in a modern school, are like separate letters of endless alphabets. You may load the mechanical memory with them till it becomes a marvel of retentiveness. Your young prodigy may amaze examiners and delight inspectors. His achievements may be emblazoned in Blue Books and form matter for flattering reports on the excellence of our educational system, and all the while you have been feeding him with chips of granite.* "Teach your boys subjects which they can only remember mechanically, and you teach them nothing which it is worth their while to know. Teach them facts and principles which they can apply and use in the work of their lives,"† and you educate them wisely.

Froude, moreover, applies the same principle of utility to the higher education of the Universities. "The student should learn at the University what will enable him to earn his living as soon after he leaves it as possible."‡ In the choice of subjects for any particular profession, utility should be the sole guide. "History, poetry, logic, moral philosophy, classical literature, are excellent as ornament. If you care for such things, they may be the amusement of your leisure hereafter, but they will not help you to stand on your feet and walk alone, and no one is properly a man till he can do that." "You cannot learn everything; the objects of knowledge have multiplied beyond the powers of the strongest mind to keep pace with them all. You must choose amongst them, and the only reasonable choice in such matters is utility."§ For, what is to be deplored in our present higher education is "the devotion of so much effort and so many precious years to subjects which have no practical bearing upon life." Classical studies, taking "no hold upon the living hearts and imagination of men in this modern age, make them incapable of really understanding the world in which they live."||

But, it may be asked, "whether this earning our living, this getting on in the world, are not low objects for human beings to set before themselves. Is not spirit more than matter? Is there no such thing as pure intellectual culture?"¶ The answer is: Yes, there are spiritual callings, but they are for the few. Further, let those who say we will devote ourselves to the pursuit of truth, of wisdom, of science, or of art for their own sakes, first make sure of their calling in their particular pursuit; and secondly, let them not "expect to be rewarded with the wages of the other professions."*** Moreover, in the past, great men—e.g., Spinoza, have carried on their intellectual work, and at the same time have maintained themselves by honest labour. And it would be a good thing if all men had some calling which produced them a subsistence independently of their literary or scientific work.

We may at once agree that the first requisite of all sound education is that everyone should be "put in

the way of maintaining himself in honest independence," and that to secure the technical efficiency of the future workmen of the State is a first necessity of any system of national education. But the technical efficiency of the worker is a means, and not an end, in itself, and whether it be a good or a bad thing depends upon the nature of the end to which technical efficiency is a means. Now we may view this from three distinct points of view. We may consider the higher technical efficiency of the worker mainly as a means by which the power and industrial supremacy of the nation may be maintained against other States imbued with similar ideals, or we may look upon the greater efficiency of the worker as a means by which he may be enabled to reach and to maintain a higher standard of life and comfort; or, lastly, we may consider such technical efficiency as an end in itself, or, at best, simply as a means to higher wages, which the individual may spend wisely or unwisely, according to his particular bent.

Now, the first view pervades the ideal of education almost universally held in Germany, as it also underlies the educational utterances of many people in this country, from Lord Haldane downwards, and, as a consequence, industrialism becomes the twin sister and ally of militarism, for both tend to hypostatize the State and to consider the individual's industrial as well as his military efficiency as a means to the supremacy and power of the particular State. And it is needless to point out that, so long as such an ideal prevails amongst the great European nations, a permanent and enduring peace is impossible. Moreover, although for a time under such a system the individual may benefit and may attain to a higher standard of comfort, yet for the mass of the people, even in the times of so-called peace, there can be no guarantee of permanence, since this result is incidental, and not the main object aimed at.

The other and extreme view is the practice rather than the theory of Great Britain, and as a consequence, even in this time of national danger, we have sectional labour strikes and the demand for higher wages and War bonuses on the part of many workers. Each individual or class seems an implicit believer in the "simple doctrine of natural liberty"—viz., that, by seeking one's own self-interest first and foremost, we thereby promote the common interest of all. If our educational system is to be amended or remodelled, with the object in view of improving our institutions so as to secure the better scientific and technical efficiency of the workers of the nation, and *that alone*, then our future state will be even worse than the present. And Lord Haldane, who is the chief apostle of greater technical efficiency, is too good a philosopher not to be fully aware that the bane of English political thought, from Bentham to Herbert Spencer, has lain in its extreme individualism, just as the error of German political philosophy, from Fichte and Hegel to the present day, is to be found in the exaltation of the claims of the State over against those of the individual. Here, as elsewhere, we must go back to Kant,* and maintain first, and above all, that man's life is an end in itself, and that States and educational systems have their *raison d'être* as means to the enhancing and perfecting of the individual human life.

Moreover, technical efficiency in this day of extreme specialization is an evil in itself, unless otherwise counteracted. "When the greater part of a man's life," James Mill writes, "is employed in the performance of a few simple operations, all exercise of ingenuity, all adaptation of means to ends, is wholly excluded and the faculty lost, as far as disuse can destroy the faculties of the mind. The minds, therefore, of the great body of the people are in danger of really degenerating, while the other elements of civilization are advancing, unless care is taken, by means of the other instruments of education, to counteract those

* Even back to Plato and Aristotle. Cf. Burnet's *Aristotle on Education*.

effects which the simplification of manual processes have a tendency to produce."* The warning thus given in the early years of the nineteenth century needs to be reiterated with greater emphasis in the twentieth.

So we conclude that the only sane position is that technical efficiency is a means to the betterment and perfection of man's life, and, if this be so, then what we need—and, in fact, what all Europe needs—is a system of liberal education. A liberal education, which will further genuine human interests and so free man from all narrow class and national prejudices, and make us each and all realize that we are heirs of a common civilization, and that the only war in which the nations of Europe may legitimately engage is the never-ceasing fight between good and evil. For, if it is to be otherwise, if national and educational ideals are to remain unchanged or to develop as at present conceived, then the future of Europe may well make us all afraid.

If the contest for industrial supremacy must be backed up by military force, and if this is to be determined by the nation which, by means of its technical efficiency, produces the most deadly fighting machines, then we may well ask: What is the worth and value of our so-called European civilization? If, further, we remember that educational ideals are relative to the civilization from which they, on the one hand, spring, and, on the other, which they tend to further and develop, we shall come to the conclusion that, until the nations of Europe realize that industrial power and material wealth have value only as means to the fuller life of the individual, then our educational ideals must remain unchanged. Nevertheless, it is the duty of all who disbelieve in the panacea of greater technical efficiency, to din into the ears of our legislators and rulers "that life does not exist for business, but business for life."

As regards Froude's contention that utility should be the sole guide in University studies, we may quote the objections urged by John Stuart Mill against such a narrow specialization. "Experience," he writes, "proves that there is no one study or pursuit which, practised to the exclusion of all others, does not narrow and pervert the mind, breeding in it a class of prejudices special to that pursuit, besides a general prejudice, common to all narrow specialities, against large views, from an incapacity to take in and appreciate the grounds of them. We should have to expect that human nature would be more and more dwarfed and unfitted for great things by its very proficiency in small things."†

Lastly, Froude's criticisms of the conception that education consists largely in the imparting of miscellaneous information need to be repeated and reinforced at the present day. It pervades a large part of our elementary education. The limits of this article prevent a full discussion of this topic, but the prevalence of this error is due largely to the fact that our elementary-school teachers are all turned out with what we may call the "training-college mind." All real acquisition of knowledge is motivated by the desire to attain some practical end, or by the endeavour to solve some theoretical problem; but, from the very beginning, the teacher-student is imbued with the idea that the only object in the acquisition of knowledge is to be able to impart it hereafter to others. Further, the curriculum of the training college is so overcrowded that the student gets but a smattering of many subjects, and, as a consequence, never develops any real interest in any one. If we further remember that the training-college ideal of successful teaching is based on object-lesson instruction, then we may realize the definite type of mind generally produced, and come to the conclusion that any real reform must first begin with the reform of the training-college system.

SHAKESPEARE AND THE DRAMA.

ANYONE who has read Prof. Bradley's essay on *Shakespeare the Man*, based as it is almost entirely on the evidence of Shakespeare's works, must feel that he has derived from it a far clearer and more certain idea of the poet's personality than can be gained by a piecing together of the fragmentary, and almost always doubtful, biographical data of which most of the "Lives" are composed. In the same way Ford Madox Brown's imaginary reconstruction of his features is almost more convincing even than the most authentic of the portraits and busts on which it is supposed to be based. He also has probably put into it something of what he has grasped by intuition of the Shakespeare of the plays and sonnets, which are our only means of access to the living author. Perhaps one reason why Prof. Bradley's picture convinces us is that it is so thoroughly English, and we feel that Shakespeare was characteristically English. It is not because he wrote the apostrophe to "this sceptred isle" in *Richard II.* or a series of "tragical-comical-historical" plays of a patriotic colour, that we look upon him as characteristically English, but because he is the opposite of doctrinaire, presents thoughts in concrete form, loves Nature without sentimentality, has outdoor tastes, is content to embody his genius often in slipshod forms, uses dramatic media which are a compromise between tragedy and comedy, is reserved about his religious opinions, and, when he expresses them, shows us a conservative, common-sense view tinged with scepticism; lastly, because he has no sympathy with popular causes (no Englishman ever was a real democrat—he is too unsusceptible to abstract ideas)—in all these ways, and many more, Shakespeare is the Englishman of all ages. How it is that he appeals so strongly to the German mind it is difficult to understand. One who is not German scholar enough to have read their translations cannot help suspecting strongly that they have tidied him up and made something quite trim and respectable of the rambling and plebeian prose of *Twelfth Night* and *Henry IV.* The only other possible explanations are that they do sometimes like to see something which is the exact opposite of themselves in form and idea, or that the difficulty of Shakespeare attracts them. I often think, when galloping through *Hamlet* or *Othello* with a Shakespeare reading circle, of the hours we spent conscientiously unravelling obscure choruses of Aeschylus, and think of foreigners doing the same with a passage like this:

Sir, his definement suffers no perdition in you, though, I know, to divide him inventorially would dizzy the arithmetic of memory, † and yet but yaw neither, in respect of his quick sail. But, in the verity of extolment, I take him to be a soul of great article; and his infusion of such dearth and rareness, as, to make true diction of him, his semblable is his mirror, and, who else would trace him, his umbrage, nothing more.

There it is, even with the dagger, which used to serve as a sort of danger-signal that something unintelligible was coming, in our Greek choruses. And the strange thing is that Shakespeare is read so much more often than acted, though on the stage these obscurities can so often be made more or less articulate by the action and intonation of the player. What proportion even of the really well educated have ever seen *King Lear* played? Yet those who have seen it tell us that we have no conception of the play if we have only read it, and that one may easily believe. Even more than Euripides, possibly even more than Bernard Shaw, Shakespeare's plays were written to be acted, not read.

Dramatic enthusiasts will probably tell us that the reason why we neglect the acting of Shakespeare is because there is no demand for real drama in this country. The spirit which created the Elizabethan drama, they say, is lacking in us, and we shall neither find a taste for Shakespeare nor for new drama of good quality until a similar spirit revives in us. It is true that the taste for good drama is rare. Nothing impresses it more on one than reading the essays of public-

* Article on Education, page 30. Reprinted from Encyclopædia Britannica (Fifth Edition).

† *Rectorial Addresses*, page 28.

school boys on any subject connected with the stage. They all make it plain that there is no taste for serious drama in their circles, only for the light and amusing—*The Man who Stayed at Home* for the best, and the musical comedy (so called because it contains neither music nor comedy) for the worst. But is it certain that there was much refined taste in Shakespeare's time? If so, why did he have to throw out continual sops to his audience in the way of noise and coarseness and cheap puns, and why did he write *Henry V*? It is no good pretending that *Henry V* is a good play. It is patriotic, of course, and therefore it is considered particularly suitable for schools. (The good people who form committees to promote patriotism in our schools are so curiously unaware that they are organizing missions to the converted. What wants doing is to improve the quality, not the quantity, of patriotism in schools.) *Henry V* is really much nearer in quality to *Henry of Navarre* than to *Hamlet*. Of course, there is good rhetoric in it, but it is still rhetoric, and any Elizabethan dramatist with any pretensions could write good rhetoric. Witness the non-Shakespearean portions of *Henry VIII*, or Marlowe or Fletcher *passim*. As to *Henry V* being the character of the ideal king, have any of those who assert it ever really analysed the character? The bourgeois patrons on the stage in *The Knight of the Burning Pestle* tell the same tale. People came to the Globe Theatre for relaxation, excitement, amusement, no less than they do to the theatres across the bridges of to-day. Is it not possible that even the much-idealized Periclean audience did not wholly come in the spirit of religious reverence attributed to them? If not, we have some explanation of the odd fact that some of Sophocles' best plays did not gain the first prize. They were possibly thought a little dull, even if necessary, like a Palestrina anthem for the afternoon congregation at St. Paul's. It would account, too, for the puzzle of the *Alcestis* and the *Bacchae*. Euripides gave his audience ideas, while they thought that he was giving them melodrama. In the same way, no doubt, the greater part of Shakespeare's audience tolerated the great soliloquies in *Hamlet* because they were in hopes of seeing the ghost again or knew that it must end with some killing. But it is important to observe that that is not the sort of taste which gives rise to musical comedy. The real hope for the modern drama lies in the instinct of the popular audience for melodrama. It is only an effete upper class which is amused by insipidity. The populace likes full-blooded heroes and villains; and no one who has never seen a popular melodrama acted knows the enthusiasm and the depth of moral execration which the heroine or villain can evoke. Possibly even the hairbreadth escapes of the cinema films and the "human bridge" across the ravine, which we see depicted on hoardings, are more hopeful than the utter vacuity of the musical comedy. Melodrama is the exaggeration of simple emotions, and because it is simple and emotional it has more likelihood of developing into real drama than any self-conscious attempt to appeal exclusively to the intellectual. No doubt the reason why Shakespeare spoiled the scene between Hubert and Arthur, and made it not only grotesque but rather morbid, was because he was influenced by the melodramatic propensities of his audience. It is a scene which has always been popular with the country theatre-goers who come up with a cheap ticket to Shakespearean *matinées*. But the false sentimentality of it is a small price to pay for the real grief of Constance. Probably the supreme art of her frantic speeches has been undervalued because people think that Shakespeare is most admirable when most difficult. *Hamlet* and *King Lear* flatter the literary aspirant because they present problems of interpretation; just as the pieces of Browning which are most popular with Extension classes are those which no one can understand. But Constance's speeches are so simple that they need no skill at all, either of actor or reader, to interpret them. They simply need speaking.

And, Father Cardinal, I have heard you say
That we shall see and know our friends in Heaven:
If that be true, I shall see my boy again.

Or, again,

Fare you well; had you such a loss as I,
I could give better comfort than you do.

But we must not forget that the way to that scene lay through *Richard III* with his hump and his unrelieved devilry; and, beyond it again, was that most utterly false and priggish of popular heroes, Henry V, to show that, not even in his middle period—not, in fact, till the dark time of *Hamlet* and *Othello* and *Lear* had purged his mind, as it would seem, of all temptation to play down to an audience—did Shakespeare rise quite clear of the atmosphere of truly English melodrama in which his first plays were born.

G. K.

MRS. SHERWOOD'S INTRODUCTION TO GEOGRAPHY.*

By C. BIRCHENOUGH.

THE Right Hon. G. W. E. Russell, in one of his delightful discourses in "Collections and Recollections," divides mankind into two groups, according as they have, or have not, been brought up on *The Fairchild Family*. Some, at least, of the elect are well acquainted with their authoress's *Introduction to Geography*, intended for little children, and, no doubt, they have wondered that a book of its unique qualities should have escaped the notice—if not of those who are actively interested in propagating methods of teaching the geography of the war areas to the rising generation, at any rate of those mystics with a penchant for arithmetical puzzles who find in the pages of Holy Writ exact forecasts of these years of Armageddon.

Mrs. Sherwood belongs to that group of cultivated gentlewomen—the Mrs. Chapones, the Mrs. Barbaulds, the Hannah Mores, the Maria Edgeworths—who, during the closing years of the eighteenth and the first half of the nineteenth centuries, devoted themselves so fruitfully to matters of education and produced a rich children's literature. She stands out as perhaps the most prolific of them all, for upwards of 350 books, essays, and pamphlets have been traced to her. Through her children's books runs the strong Evangelical note that is so characteristic of *The Fairchild Family*, or *The Child's Manual*, and it is this quality that gives to the *Introduction to Geography*—a small 12mo., 136-page textbook—a notability of its own.

The book begins with the usual definitions of land, water, continents, &c., and follows this up by a brief description of the chief countries of the globe. It is raised above the common, however by the intensity of the religious convictions of its authoress. The book breathes abhorrence of all that savours of Roman Catholicism, or smacks of idolatry or infidelity among the nations of the earth. Each definition, no less than every short section of the work, is accompanied by a scriptural quotation. These taken collectively constitute one of the most remarkable attempts at the correlation of geographical and Biblical instruction.

The character of this quaint volume can be sufficiently illustrated by culling extracts from the several sections which deal with countries now engaged in the Great War. This particular choice is made because, by an odd coincidence, the subject-matter and the verses appended often express sentiments not altogether inapt at the present time. In the section on Prussia, for example, Mrs. Sherwood reminds her young readers that "this Kingdom has suddenly risen up among the Powers of Europe, and has been allowed by the Almighty greatly to prosper and to increase from a little principality to a considerable kingdom." She concludes her account with an extract from Psalm lxxv, 5-7: "Lift not up your horn on high: speak not with a stiff neck. For promotion cometh neither from the east, nor from the west,

* Third Edition, 1823.

nor from the south. But God is the judge; he putteth down one, and setteth up another."

Of the Austrian Empire we are told that "these dominions have, by a series of fortunate marriages, become subject to the princes of the house of Austria," with a reference to Ezekiel xxi, 26.

Turkey, which at that time covered the whole Balkan peninsula, is credited with great strength and likened to a horse: "Hast thou given the horse strength? hast thou clothed his neck with thunder? . . . He swalloweth the ground with fierceness and rage; . . . he smelleth the battle afar off" (Job xxxix, 19-25). A likeness that might not be considered altogether applicable to the Young Turks of to-day.

The description of France is followed by verses from the Psalms (xxvii, 4, 5), complimentary but singularly inappropriate.

Russia is viewed with no great partiality. The section, for example, closes with an extract from Ezekiel xxxii, 27, which ends: "And they shall not lie with the mighty that are fallen of the uncircumcised, . . . but their iniquities shall be upon their bones, though they were the terror of the mighty in the land of the living."

Italy, on the other hand, is favoured with a verse from Daniel ii, 40: "The fourth kingdom shall be strong as iron: forasmuch as iron breaketh in pieces and subdueth all things: and as iron that breaketh all these, shall it break in pieces and bruise."

The treatment of Holland reminds us of the famous lines about "the fault of the Dutch." "The inhabitants of Holland are industrious and laborious in traffic; but, it is well known, are too much addicted to the love of money, which makes them guilty of many severities and other evil practices." "The love of money is the root of all evil," &c. (1 Tim. vi, 10).

This artificial correlation of history with Biblical instruction must not be regarded as something peculiar to Mrs. Sherwood. It is a well recognized practice, for example, both in British and National schools. A classical instance of combining Biblical instruction and arithmetic is found in the Rev. J. C. Wigram's *Elementary Arithmetic*, the exercises of which are of the type: "'Mesha king of Moab was a sheep-master, and rendered unto the king of Israel 100,000 lambs' (2 Kings iii, 4). Write down the number in words."

Mrs. Sherwood's method of imparting this rather formidable assortment of information was also thoroughly in character with the traditions of the age. The whole book was to be learnt off verbatim, but, as far as possible, this was to be done pleasantly. She was one of that considerable body of thoughtful teachers of the eighteenth and early nineteenth centuries who were convinced of the merits of instructing through "play," who discoursed on "The Art of Teaching in Sport," who wrote books with such titles as *Amusement Hall; or, an Easy Introduction to the Attainment of Useful Knowledge*—methods that have long since been superseded. They rest on a mistaken foundation which was thoroughly exposed by Rousseau in his discussion of the method to be adopted in educating Emile. This form of instruction is commonly but mistakenly supposed to emanate from Basedow's Philanthropinum at Dessau. We recall, for example, Isaac Watts's plea in his *Discourse on the Education of Children and Youth* for the greater use of "diversions for children" is the ordinary practice of instruction fifty years before the Philanthropinum opened. "May not some little tablets of pasteboard," he asks, "be made in imitation of cards which might teach the unlearned the several parts of grammar, philology, geometry, geography, astronomy, &c.?"

"What if on one side of these tablets or charts a town or city were named and described, and on the other side, if the country, province, kingdom, where that town stands, with some geographical or historical remark on it; and whosoever in play draws the chart with the town on it should be obliged to tell the country where it stands and the remarks made on it."

Cases of geography cards arranged on this principle and dating from the beginning of last century may still be picked up for a few pence in less frequented second-hand bookshops. It was in conjunction with some such method that Mrs. Sherwood proposed that her book should be used. On a series of cards the heads of each section with the beginning of the accompanying verses were written. Thus—

PRUSSIA.

Lift not up . . .

The cards were put into a bag and the pupils were required to repeat the section and verses they happened to draw. If they failed in this they might either lose their place in class or be required to relearn the section after the ordinary lesson hours. To assist them in understanding the book a map or globe was to be used. Although neither the subject-matter nor the method accords with modern ideas, yet the pungent remarks of the gentle Mrs. Sherwood and her quaint selection of verses are not without a certain humour if only as caricatures at the present time.

EDUCATIONAL PRECOCITY.

IT is no easy problem to solve in what way the War should be brought home to children, how far they should share in privations the War brings, and how far there should be asked of them not only good feeling, but definite practical help in the work of war. But one point comes home to us plainly in reading a penny pamphlet issued by the L.C.C. Education Committee (*How we can all Help—Suggestions for Talks to Children*), and that is that you cannot educate and produce results from children in a hurry. If you get swift returns the educational process has generally suffered; the sound educator will be patient as to things that show. The children of Pestalozzi's Gertrude were, one may be sure, invaluable in an emergency; but then Gertrude did not begin to train them in diligence, carefulness, and consideration in the middle of a domestic crisis. Many quite excellent lessons are outlined in these pages, most of which could have been most profitably taught in times of peace. There is a sketch of the rise of the German Empire—something about Russia and France might be added—a good chapter on how we pay for our imports, a chapter on useful and useless things containing the much needed maxim, "it is very important not only that everybody should do some work, but that everybody should do useful work," and so on.

If such things have not been taught before, it is a good thing to begin at once to teach them; only, if the teaching is to be education, it must be given time to work. The Education Committee wants to arrange for the picking of the flowers at the same time as the planting of the seeds. The end chapters betray an uneasy sense that natural processes of growth will not produce the required result, and a little forcing is resorted to. Difficulties that might occur to the disingenuous mind of the child when he is called upon for sacrifices are stated and dealt with not very successfully; and, in case the watering given to the seeds in the form of stirring poetry should not be sufficient, we pass from "We must be free or die," &c., to "You see, you get more interest by this plan (the War Loan) than by the ordinary Savings-Bank plan"; from education to commercialism.

The lessons on some of the pages taken to heart might have resulted in many a child's penny being saved, but that is a different matter. The insistence on definite small bits of saving on the part of the child as being of importance in themselves, apart from the child, detracts from the real merits

of the pamphlet, and serves only to remind us that we have closed our museums and picture galleries, from the most patriotic motives, while we still spend hundreds of thousands of pounds upon drink. What should go last goes first, what should rule subserves.

We are sorry that the concluding pages are issued by an Education Committee, and that much of the practical advice was not offered to anyone rather than to the children.

REVIEWS AND MINOR NOTICES.

William Wordsworth: His Life, Works, and Influence.

By GEORGE MCLEAN HARPER, Professor in Princeton University. (2 vols., 24s. John Murray.)

Prof. Harper has produced what can be rightly called a new life of Wordsworth. He has had access, through surviving relatives, to unpublished letters both of Wordsworth himself and his sister, to the MSS. of *Dorothy's Journal*, and to private information hitherto withheld from the poet's biographers. He has handled his new material with wisdom and delicacy, and every scrap of it is an addition either to our accurate knowledge of Wordsworth's life or to our better understanding of his character. He has, moreover, made an extensive study of the periodical and other literature of the time, and very little illustrative material of any value has escaped his net.

He steps aside from the orthodox tradition of Wordsworthian biography in laying the greatest stress upon the years of Wordsworth's life in which he was in close connexion with France and the Revolution. "He went to France," he writes, "a susceptible boy; he returned a man with a philosophy and a purpose. It is a thousand pities that he renounced this philosophy and changed this purpose. When they ruled him, and even while they were loosening their hold upon him, he wrote his best poetry." And so he devotes his closest scrutiny and his fullest treatment to this period. Wordsworth's first biographer, his nephew Bishop Wordsworth, wrote from the Anglican and Conservative standpoint, and viewed his uncle's life in that perspective. Prof. Harper makes telling use of the early portion of this, the official life, by placing at the head of each of his own packed and interesting early chapters, the meagre, cautious sentences in which Wordsworth's nephew slurred over the events of each in turn of the poet's ardent, unregenerate years. He makes the still more interesting point that Wordsworth himself in later years joined in this conspiracy of silence and suppression, by altering the text of his poems, and especially *The Prelude*, with a view to expunging passages which revealed him as a young champion of the Revolution. He has much light to throw on the events of Wordsworth's second visit to France, November 1791–December (?) 1792. His researches have enabled him to give a lively picture of the social life at Blois, at the date of Wordsworth's sojourn there, and have revealed the existence of an interesting Republican Club then flourishing in the town, whose meetings Wordsworth almost certainly attended. The most interesting new fact that he has to publish of Wordsworth's personal life belongs also to this period. The peculiar intensity of the poet's love for France and his passionate interest in her destinies have always been recognized by intimate students. The new facts which give tragic meaning to this love and interest are these: that Wordsworth formed a passionate attachment during his stay in Blois to a French girl, Annette, the daughter of a Royalist family, that her parents prevented the marriage, that she bore Wordsworth a daughter, and that he kept in close touch with the mother and child for years after his return to England. Annette and her daughter Caroline appear often in *Dorothy's Journal*. It was they whom she and William went to see when they crossed to France in 1802. It was Caroline who walked beside them on the sands at Calais, and whom Wordsworth addresses in his sonnet,

Dear child, dear girl, who walkest with me here,

Thou liest in Abraham's bosom all the year.

Dorothy was from the first in her brother's confidence, and showed from the first that "vigorous human-heartedness" and that delicate rightness in feeling and action which those who know her could have counted upon. When Caroline was to be married in 1814, she wrote to beg her aunt to come over to France for the wedding, vowing that she would not be married without her. If Napoleon had not at the critical moment escaped from Elba, Dorothy would have been there as she wished.

Prof. Harper's treatment of the years following Wordsworth's return to England—1793–1798—is original. He believes, first, that Wordsworth adhered much longer than is generally supposed to the Revolutionary creed; secondly, that he fell completely, and for six years, under the influence of Godwin; thirdly, that he did not, between 1793 and 1796, pass through a phase of gloom and despair from which Dorothy and Coleridge rescued him. We are not satisfied that he has proved his points. On the first, he states (I, page 210): "It is worth while to observe that his satisfaction in the defeats of the Allies continued so late as 1805, when the tenth book of *The Prelude* was written." But the passage which he cites (*Prelude* X, 384) refers to the year 1793, and reflects his emotions of that date, not his opinion at the time of writing, 1805. Already, in 1803, Wordsworth had eagerly enrolled himself as a volunteer, and his "recruiting" sonnets, written in the same year, are plain proof of his vigorously patriotic sympathies. Prof. Harper makes, however, a solid contribution to our knowledge of Wordsworth at this period by showing how he was linked with the small group of Republican Englishmen then in London.

As to Godwin's influence, he makes the qualified statement (Vol. I, page 253) that for at least three or four years Wordsworth acquiesced in his system. But he states categorically on the same page that he gave it "a brave and stubborn allegiance from his twenty-third to his twenty-ninth year," and on page 260 he twice reiterates that Wordsworth "adhered to the Godwinian system for six years." It may be so, but the proof is wanting. Prof. Harper gives an enthusiastic exposition of the philosopher's system, and is then contented with the assertion that "every one of these articles is affirmed by Wordsworth either . . . in his early poems, or . . . in his *Reply to Bishop Watson*, or . . . in his letters to Matthews." One of the essential principles of Godwin's moral creed is, according to Harper, that "there is no place for deeds of gratitude, for pardon, for partiality to friends or kindred. . . ." If Wordsworth did indeed "accept Godwin's system as a whole," and adhere to it as late as 1798, the *Lyrical Ballads* should illustrate the principle just quoted. But what of Simon Lee, in whom the spirit of gratitude is made a thing of beauty and infinite pathos; what of Goody Blake, whose righteous wrath descends upon her tormentor, inhumanly vindictive where he should humanly have pardoned; and what of *The Idiot Boy*, *The Mad Mother*, *The Forsaken Indian Woman*—poems in which the passionate tenacious love of mother for child is indeed an apotheosis of what Godwin coldly condemned as "partiality for friends or kindred"? Prof. Harper has done no harm by putting Godwin's system in an attractive light; he makes it conceivable that Wordsworth was more deeply influenced by it than we knew. But to any one accustomed to weigh evidence he has made out no case at all, either for the completeness of Wordsworth's surrender or for its six years' duration.

On the third point, the non-existence of Wordsworth's phase of gloom and despair, 1793–1796, Prof. Harper is somewhat inconsistent. He speaks (I, page 210) of the agony and gloom of his spirit for several years after his return from France; yet, on page 205, he indignantly challenges "anyone who still holds the view that Wordsworth for two or three years after his return from France suffered a dulling of sensibilities, an obscuration of spirits," &c., until his sister restored him to peace of mind. He

attempts to show that at Racedown Wordsworth was in excellent spirits, and not, as is usually supposed, in the process of struggling back to optimism. Possibly there is something to correct in the accepted view of Wordsworth's pessimism at this period, but Prof. Harper "o'erleaps himself and falls on the other." We are not surprised that Wordsworth was cheerful in the society of Dorothy, Mary Hutchinson, and Coleridge, but this does not alter the fact that he wrote at this period *The Convict*, *The Borderers*, and *The Ruined Cottage*, poems in which pessimistic thought is either in absolute dominance or in the process of purging itself. Wordsworth's own statement (proved up to the hilt by the poems he wrote at this period) that he passed in these years through some spiritual valley of the shadow, out of which Coleridge and Dorothy led him, has not yet been controverted.

In his treatment of Wordsworth's later life there is political prejudice of another colour from that which pervades and dulls the pages of the Bishop's Memoir.

Prof. Harper makes no secret of his own politics. "The essence of Toryism," he says, "is despair of human nature. The essence of the revolutionary and progressive spirit is trust in human nature." He resigns himself to accept Wordsworth after 1807 as a hopeless reactionary, if not apostate, to his earlier principles. "What a respectable old Tory he has become [in 1814]!" he writes. But this is what Wordsworth never became. His ardent belief in Nationality, his defiant criticism of the narrower patriotism which seeks only the interest of its own native land (*vide Convention of Cintra*), his plea for the right of the poor man to be provided with work or support by the State (*vide* Postscript to *Poetical Works*, 1836), his genuine sympathy with the demands of the Chartists (*vide* his interview with Thomas Cooper, the Chartist poet, described in the latter's autobiography)—all these are as true a part of Wordsworth as his blatantly Conservative views on the Reform Bill, and they explain the fact that two such liberal and progressive thinkers as Thomas Arnold and J. S. Mill independently record their sympathy with Wordsworth's general principles, though not with his views on particular issues. Prof. Harper has failed to show that the Wordsworth of middle age was not the same person as the Wordsworth of early manhood. He labours, we believe, under the common delusion that a Liberal and a Conservative are two distinct varieties of the human species.

The question finally arises: Has the new Life altered in any important way our estimate of Wordsworth? The student already intimate with his subject will answer "No." It has corroborated and confirmed what he knew already of Wordsworth's essentially passionate nature, of his absorption in the progressive thought of the Revolution period, and it has touched into more vivid reality the known personalities of Coleridge and Dorothy. It has at many points in the earlier narrative filled up gaps and sketched in details of scene and situation, which help to solidify as well as illuminate a story already rich in detail. The general public will perhaps answer the question differently. What the student already knew the public has been slow to learn, and Prof. Harper's enthusiastic narrative will do much to dispel an illusion which even yet obscures the popular view of Wordsworth's character. How many people still think of him as mild and gentle in temper, conventional in habit and thought, safely Conservative in politics, narrowly sectarian in religion? Their number should be appreciably diminished by the publication of this new Life.

A Companion to Greek Studies. Edited by LEONARD WHIBLEY. Third edition. Revised and enlarged. (16s. Cambridge University Press.)

The demand for a new edition of this *Companion*, eleven years after its first publication, shows that it has justified its existence, though it is not quite clear for what kind of student it is meant, and different contributors have evidently taken different views of their task, some giving what are virtually catalogues, of use only for reference or for "cram," while

others have written excellent little introductory treatises on the subjects of which they treat. The new edition is larger and better illustrated than its predecessors, and the revision has certainly improved it in many respects. But we could have wished for a fuller treatment of some topics (e.g. the Influence of Geography on History, Hero-Worship, Mysteries, Oracles, Finance), and for many more illustrations. Space might well have been found for these by the entire omission of the section on Greek Literature. There are plenty of short histories of Greek literature, and the present one is too brief to be of much value (except, perhaps, for purposes of "cram") to a student sufficiently advanced to make use of some of the other articles, and in some parts—especially in the treatment of the drama—it is misleading and out of date. So far as this section is concerned, the chronological work of Wilhelm and Capps (whose results are largely beyond dispute) might as well not have been done, and no ray of the abundant light shed on the Greek drama by recent writers has penetrated the account given in the *Companion*. Even on the recently discovered plays of Menander there is only one short and very inadequate remark. A useful substitute, however, for the section on Literature (and one which need not have occupied much space) would have been a bibliography of the best standard editions of Greek authors at the present time (excluding those which were valuable once, but have been absorbed, so far as they were valuable, in later works), and of the really first-rate books on the principal departments of Greek literature.

Of the articles in which no very great change is made in the new edition, little need be said. The account of Greek Philosophy remains one of the best parts of the volume, and the sections on Plato and Aristotle are particularly valuable as being a connected statement of Dr. Jackson's view of their philosophy, very lucid and readable in spite of its inevitable brevity. Dr. E. A. Gardner's treatment of Mythology and Religion is an admirable general introduction to the subject, and displays a sanity and soundness of method which is painfully absent from some recent treatises. It is unfortunate that many topics are treated so shortly. One or two points of detail may be noted in it. The account of the Panathenaea on page 407 does not bring out the peculiar character of the festival as one which united all dwellers in Athens, irrespective of nationality. Some allusion to the beautiful stadium at Delphi, and an illustration of it, seem to be called for on page 411. It is now very doubtful whether, as stated on page 416, the tragic actors of classical times wore high buskins. Mr. Whibley's excellent account of Greek Constitutions has received some useful additions from Mr. Adcock, and the latter has brought the treatment of Attic Legal Procedure up to date, and made it a safe and adequate companion for the student of the orators. Of the other old articles no more need be said than that nearly all have been revised and improved in varying degrees.

The first of the new articles in the present edition is that by Mr. Wace on Ethnology. While giving a useful account of the present state of the problem, it is necessarily inconclusive on many points, though the theory that the Achaeans were Northern invaders is definitely rejected. Unfortunately, Dr. Leaf's important work, *Homer and History*, was not published in time to be considered in this article.

An account of the Flora of Ancient Greece, by Sir W. T. Thistleton-Dyer, replaces the article in previous editions (by Dr. Tristram). It could hardly have been entrusted to better hands; it is thoroughly up to date, and natural history and philology are combined in the identifications of Greek with modern plant names. The account of the terms applied to grain of all kinds, and in all stages of conversion into food, will be particularly useful to the ordinary scholar, and what appears on the surface to be a dry catalogue of names is frequently brightened by a touch of human interest. It is somewhat surprising, however, to find Sibthorpe's *Flora Graeca* not even mentioned in the bibliography; that magnificent work may be wrong in certain points, and the cost of it is prohibitive to the ordinary scholar, but a copy is to be found in most of the great centres of learning, and the present

reviewer, while of course using Halacsy and Heldreich (whose *Pflanzen der attischen Ebene* should also have been noticed) has found Sibthorpe of considerable value, apart from its high artistic interest. Bubani's *Flora Virgiliana* (a rare book) is of some use also in regard to the Greek flora. The article would have been much easier to consult had the name of each plant mentioned been printed in heavier type on its first occurrence in the text. Here and there the treatment is too brief; there are problems about "hyacinth" and "mallow" which are hardly alluded to. The statement about the etymology of *λείριον* on page 57 is not clear: "Name probably loan-word from Semitic, only *λειρίεις* in Homer, and meaning merely white." What means "white"? and what of *ῥα λειρίεσσαν ἰέντες*? But the article as a whole is a very valuable one for students who wish to see, as well as to read about, the world in which the early Greeks lived.

Prof. D'Arcy Thompson's account of the fauna occupies 18 pages, as against 12 in the last edition. The statement on page 39 that the little owl (*Athene noctua*) is "strictly nocturnal, concealing itself during the day," will surprise any one who has travelled in Greece and seen the little owl flying freely and pitching on telegraph wires in all parts of Greece at all times of the day. It is also very doubtful whether *σπερμολόγος* is the rook. But the article is generally accurate and useful. There is, however, room for a good illustrated Natural History of Ancient Greece, and Prof. D'Arcy Thompson would be a valuable contributor to such a work.

The archæological portion of the book is rendered more complete by the new articles on Prehistoric Art (Wace), Bronze-Work and Gold- and Silver-Work (Walters), and by the extension of the account of terra-cottas (Walters), though all these articles are so brief that they can scarcely do more for a serious student than send him on to larger works. This is, in fact, true of all the sections on the Arts.

Mr. Caspari's article on Finance would have been much more useful had sufficient space been allotted to it to allow of a succinct statement, if not discussion, of the principal views in regard to certain disputed topics (e.g. the distribution of the *εἰσφορά*); but so far as it goes it is clear and useful.

It is doubtless very difficult to bring a book of this sort entirely up to date; and the difference between the desiccated conventionality of some few parts and the openness to new light displayed in others leaves one who has read the whole book through rather regretful, on the one hand, that more of it had not been entrusted to fresher writers, but grateful, on the other, for summaries, both interesting and accurate, of the present condition of our knowledge in so many departments of scholarship.

Citizens to Be. By Miss M. L. V. HUGHES. (Constable.)

Monasticism is not, and never will be, extinct in human society. There will always be some men, and more women, who, whether living in the world or out of it, separate themselves in spirit from it, look at it as something afar off, wrap themselves up in their own work, and believe that the only hope for mankind lies in the institutions in which they live. Miss Hughes's book is pervaded by this nun-like spirit. It is a beautiful, hopeful, tranquil spirit, which in these terrible times will be balm to many a wounded soul, but it is adequate for only half our needs. For to Miss Hughes the school presents itself as an omnipotent force which, if rightly directed, will drive out every fiend that afflicts humanity—war, poverty, disease, and so forth—and make the whole earth into a City of God. In the chapter entitled "Afterwards," for instance, in which she discusses the continuation school with breadth and insight, she avows her belief that all "anti-social action" of employers is the result of inadequate civic and social training in schools and colleges, the inference being it can be prevented by improving this training. We fear the devil of greed is too strongly entrenched for such simple artillery to be effective. Education, again, will stop war; "a steady development of humanism must have resulted before this in an educated democracy, and an educated democracy must have produced international relations of such a character as

to dispense finally with the *ultima ratio* of war." Miss Hughes reasons about the results of education as the *philosophes* of the eighteenth century reasoned about political liberty, and men have learnt to be very cautious about accepting such *a priori* arguments. Every school, says our author, must inevitably become a centre of peace propaganda; disarmament must be treated as a thing inevitable; the public schools are blameworthy because they retain, and even emphasize, the military spirit. To this the only answer is that we dare not let our powder get damp. One of the many lessons which the catastrophe of the last eighteen months has taught us is that human nature cannot be relied upon: that there are hidden depths of passion which may produce a storm just when the sky seems clearest. With every attempt to foster international good-feeling by international intercourse, students' visits to foreign countries, exchange of children, spread of knowledge about our neighbours, we have as much sympathy as Miss Hughes; but we do not rely upon such things to do more than create a spirit which will make the maintenance of peace a little easier and the schemes of vaulting ambition a little more difficult.

And as with war, so with competition. By most teachers competition in school life is regarded not merely as a stimulus to effort, but as an educative force in itself, developing qualities which will be necessary in after life. But Miss Hughes holds that "to foster the individual competitive spirit in school is to play into the hands of the industrial system at its worst." She ignores the fact that the child is born into a world of struggle and strife, and will have to pass his life in it. She would have him fitted, not for the earth as it is, but for some imagined heaven of her own.

A belief in the infinite possibilities of education is inspiring, but it may be at the same time depressing. For it involves, in the case of Miss Hughes at least, the conviction that our present educational practice is a huge failure, specially in the moral sphere. General elections, Mafeking nights, prisons, hospitals, asylums, poor-houses, alcoholism, a thousand cases in the juvenile courts at Birmingham in one year—what further proof is needed? Well, Newman said that Christianity had been a failure, it had not converted man, but only certain choice specimens of him, it had not changed the characters of his mind. Judged by the monastic standard, everything has been a failure: religion, the ten commandments, civilization, liberty, family life, marriage. But has Miss Hughes, who is clearly a woman of imagination, ever tried to conceive London or Birmingham without their schools, with a pagan population of children growing up in the streets, without restraint and in darkest ignorance, subject to no influences but those of the public house and the picture palace?

Along with some extravagances, however, Miss Hughes preaches much sound doctrine. Humanism is her ideal in education—the development, that is, of the individual for social life—and she traces that conception through the long line of Humanists from Aristotle and Plato, who contain "the most complete expression of the common faith" to Froebel and Thring. The weakness of the elementary schools, with which schools the book is almost entirely concerned, is that they develop habits rather than foster interest, habits "of unthinking conformity and imitation." Hence the intellectual failure—the product of the schools lacks adaptability; and the moral failure—untrained in self-government, he lacks self-control. The root evil, as she reiterates again and again, is the size of the classes, which means learning in herds and produces "a great faculty for living, moving, and thinking in herds." In framing the curriculum we think too much of indirect values, the mere arts of reading, writing, drawing, and so forth, and too little about direct values, the enjoyment of literature and of Nature, the teaching of civic duty through the history lesson, music as an emotional influence and a thing of national significance. As might be expected from so pronounced a Humanist, the treatment of the humanistic subjects is good, that of science and manual training rather weak. Arithmetic, the author thinks, is overdone. But is not arithmetic one of the lessons in which children do most for themselves? Still, her arguments in favour of less mathe-

matics and more needlework for girls are strong. The chapter on education during adolescence contains, as we have already said, much that is valuable. Miss Hughes holds that there need be no antagonism between vocational training and a broad education for life, if we hold to the doctrine that adaptability is our aim, and that principles, not merely mechanical skill in processes, should be taught.

A History of Latin Literature. By MARCUS SOUTHWELL DIMSDALE, Fellow of King's College, Cambridge. (6s. Heinemann.)

The task of the writer of a history of literature would appear to be threefold: to give the relevant facts, or at least the chief of these, of the activity of the authors included, and of the composition of their works; to describe and to estimate the quality and characteristics of their literary performances; and, in the third place, to reinforce and illustrate his criticisms by apt illustrations from the originals. The first Mr. Dimsdale in design does well; but his execution often fails to correspond. There is much confusion and error about details, not all of them unimportant. He has drawn his information from a number of sources, and what he presents is by no means always accurate or consistent. As an example, take the dates assigned to Volcatius Sedigitus, "the time of Varro" on page 23, "about 130 B.C." on page 53, "circ. 90 B.C." on page 113. On this side the book stands in need of minute and thorough revision. Mr. Dimsdale's literary criticism is in the main sound and safe. Under his guidance the reader will rarely be far from the truth; but he must not look for much originality or brilliance. Mr. Dimsdale has many obligations to his predecessors, punctiliously acknowledged in his foot-notes, and his coruscations are rare, though "Seneca's desperate emphasis," applied by Mr. Dimsdale to the tragedies, is a very happy phrase. His characterization of Lucan shows considerable insight, not only in the expression that sums up his style as "loud, insistent, and hard," but in the observation that, strange as it seems, he sometimes reminds us of Wordsworth. Mr. Dimsdale cites II, 723 (in faciem puri redeunt languentia caeli), "of the stars at dawn," translating, perhaps over-translating, "and mingle with the stainless face of heaven." A more remarkable coincidence is to be found in V, 219 *seqq.*: "dumque a luce sacra, qua vidit fata, refertur, ad volgare iubar," which is "the light of common day" of the *Intimations of Immortality*. Inasmuch as the book is intended—at least, in part—for those who know no Latin, we should have been glad of more parallels from English literature.

In performing the last part of his task, illustrative quotation, Mr. Dimsdale has obviously been hampered by the unwise practice followed in the series of giving all quotations in English. He has not himself followed it consistently, for in many cases the original Latin is added, as should have been done in all. The omission of the Latin leaves the reader at the mercy of the translator, who may or may not have done his work well, but in any case is not the proper object of the critic's appreciations. Of the translations presented by Mr. Dimsdale some are good and others are not. For the first the rendering of Propertius IV, 10. 27 *seqq.*, may be quoted:

Old Veii, thou wert then a kingdom too,
And in thy mart was set a golden throne;
Now the slow shepherd's horn thy precincts through
Resounds, and o'er thy dead the fields are mown.

Of the other kind take, as an example where the ancient spirit has been modernized away, the version of Catullus, 93:

To stand well with you, Caesar, is nothing to me,
Nor to know if a *saint* or *sinner* you be,

where the words in italics misrepresent not only the tone, but the actual meaning of "*albus an ater homo*." Or, again, where a phrase like "by glooming meres astray" is assigned to Tibullus, and one like "atrenble with the thunderous sea" to Valerius Flaccus. On the whole, then, we see that Mr. Dimsdale has produced a useful and meritorious work, but one still capable of improvement.

Teaching: its Nature and Varieties. By BENJAMIN DUMVILLE, M.A. (University Tutorial Press.)

Owing to the large number of books dealing with the Theory and Practice of Education which come into the hands of the reviewer of educational books, he must be prepared, if he be wise and judicious, to alter his perspective somewhat; and search not for new and striking ideas and theories, but for the book's utility and service from the standpoint of the student and less experienced teacher. From this test stringently applied, this carefully thought-out and conscientiously written handbook by Mr. Dumville emerges successfully, though the arrangement of the matter strikes us as rather cumbersome and capable of being presented in a form easier to apprehend and analyse. The weakest part of the book in our judgment is the preface which might with advantage be omitted from subsequent editions. Neither the claim put forward by Mr. Dumville that his book "differs fundamentally from other pedagogical manuals," in that it explains the processes involved in all forms of instruction, can be justified by anyone conversant with the great body of literature that has been written upon the science of education; nor is the analogy between the teacher and the mechanic a sound one. The engineer in no sense plays the same rôle as the inspector of education, nor would the most intelligent of mechanics need to grasp the scheme of the engineer master-mind in order that he should fulfil his work accurately and perfectly. The preface then may do real injury to Mr. Dumville's book which it is far from meriting. For it is singularly free from misleading generalizations, and steers clear of the twin failings that as a rule characterize guides of this sort. It is neither unhelpfully vague nor yet on the other hand ignorantly dogmatic. Mr. Dumville takes up a position between the old school of pedagogy in which discipline of the mind and body was the key-note of educational doctrine, nay even its most supreme law, and on the other hand the extreme devotees of the Montessori School, and, on the whole, his attitude is that of common sense and experience combined. Under the rather fanciful, and wholly arbitrary headings of Teaching as Telling, Teaching as causing to Learn, Object Teaching and the Teaching of Skill, the Teaching of General Truths, Heuristic Teaching and Inspirational Teaching as applied respectively to History, Literature, &c., the author ranges over the various types of teaching and the conditions and methods appertaining to each in relation to specific examples and subjects. He writes with breadth and elasticity, the product of both study and practical experience, with the result that a sure basis is reached and the science of teaching invested with that philosophic standpoint without which even the teaching of the youngest child becomes mechanical and unintelligent. The young teacher who studies these pages with intelligence will find that the outcome is not only the stored knowledge needed in the examination room, but that more fruitful spirit of interested observation with which every novice should start upon his great work.

The Napier Tercentenary Memorial Volume. Edited by C. G. KNOTT, D.Sc. (21s. net. Longmans, for the R.S.E.)

This handsome quarto volume, with fifteen plates, a portrait of Napier and an oil painting of Merchiston Castle, reproduced in colour, forms a fitting souvenir of the 1914 Tercentenary Celebration. The inaugural address by Lord Moulton deals with Napier's mode of discovery, and is followed by a biographical memoir due to Prof. Hume Brown. Profs. Smith and Cajori contribute papers of historical interest dealing incidentally with questions of priority of invention. Prof. Gibson has a paper comparing Briggs's and Napier's logarithms, Dr. Glaisher a paper on Computations, and Prof. Sampson edits a bibliography of seventy pages dealing with the books exhibited at the meeting. There are many papers dealing with the arrangement of mathematical tables, including a particularly suggestive note by Prof. Stegall on economy of entries. Dr. Milne makes some important recommendations on setting out tables, binding, &c., and gives illustrations showing the advantage of the old numeral

symbols with projecting heads and tails. There are many other papers of equal interest and importance, including contributions from Continental sources.

A History of the Family as a Social and Educational Institution. By W. GOODSELL, Ph.D.

As an encyclopædic and most exhaustive account of the development of family life from primitive times to its decline in the present day Prof. Goodsell's book will be useful. As a guide to future conduct it will be less so. He examines the causes of dissolution in family life at the present day, and finds them to be principally three: the refusal of the husband to recognize the wife's claims to assert her individuality, the ignorance of young men and women concerning the obligations of the married state, and the declining birth-rate. Then follows an exhaustive catalogue of current "views" on the question—a catalogue such as we have learned to expect from German sources, and which is now becoming associated with America—wholly impersonal, and leaving to us the difficult task of discovering which view the writer himself holds. On the whole, we should select the "moderate progressive," favouring a mild and negative form of eugenical legislation, as claiming his sympathy more particularly. He closes with some more inspiring suggestions as to the part which education can play in saving the race from self-destruction, and quotes Stanley Hall's advice to encourage generous enthusiasms of all kinds as a means of transmuting sex impulse into ideal effort. The only doubt that it leaves in our mind is whether this transmutation may not produce the idealism without the effort, and, by substituting contemplation for will, encourage sterility. Schopenhauer looked for such a process. If the family is to be saved, it must be by some process analogous to that of federation in the political world. Exclusive nationality has been fostered too much. All the European troubles of the last forty years have related to the Balkan States, whose independent nationality we rescued and secured so carefully. Had they been required to federate, or in some way enter into closer relations with one another as a condition of independence, it might all have been prevented. Similarly, the exclusive individuality of the family is not a source of strength. If husband and wife are severally free to live their own lives and attach themselves to whatever social group they choose, the bond that unites them may be strengthened, not weakened.

"Cambridge Handbooks for Teachers."—*The Teaching of Geography.* By B. C. WALLIS. (3s. 6d. Cambridge University Press.)

A work on teaching can never be authoritative, like a work on medicine, because teachers are not agreed upon the end to be attained, much less on the means to be employed. Mr. Wallis makes Economic Geography his main object: he wants children to learn how the different sections of mankind are dependent on one another, and to "grasp, as an organized whole, the work of the world." Nations are interesting to him as a teacher according to the contributions that they make to the material welfare of the race; "self-centred peoples are only of importance in the degree to which they respond to their world environment by partially ceasing to be self-centred." The Chinese are important because they supply us with tea, not because they possess a civilization and a mentality of a peculiar type. The object of studying the geography of India will be to learn what India sends Europe and what Europe sends India, not to discover Hindoo life and to find out what the British *Raj* is and what it means to India. There may be differences of opinion about the value of the commercial facts that Mr. Wallis wants taught: some teachers will say that they can be readily found in *Whitaker's Almanack*, but all will agree that the teacher of geography must have an aim and a plan, and that Mr. Wallis has both. He starts with an unsystematic description of distant lands based on the stories of travel, real or fictitious, an excellent device. He then proceeds to the study of great climatic areas, e.g. the grass lands of the world and their products. Here we do not feel on quite such safe ground: these conceptions seem over-large for the mental grasp of young children. Later will come the more detailed study of countries and other land areas. Throughout, the human geography is based on the physical, and the whole conceived as a chain of causes and effects. The author's description of his methods of making boys learn by doing, his suggestions for the making of various kinds of maps, for practical work both out of doors and in, are well worth study; but his readers will do well to keep in mind the Frenchman's proverb, "Qui trop embrasse mal étreint." A good chapter in the book is that on Quantitative Work, in which Mr. Wallis shows how numbers may be invested with meaning and the sense of numerical proportion cultivated, a sense which in a

great number of even well educated people is but poorly developed. The chapter on the connexion of history and geography on the other hand is weak. Our author does not think that there is much room for the correlation of the two subjects in the classroom. He does not recognize the fact that the present condition of many great areas, even their economic condition, is due to historical causes as much as geographical, and that in such cases we need a blend of the two branches of study. The difference between Asia Minor and India is due not merely to climatic causes but to the fact that the Turk is in the one and the Englishman in the other. History, as well as geography, lies at the back of all colonial history; and if the geographer, when he reaches South America or the East Indies, does not give his pupils some glimpse of Spanish and Dutch history, he is missing a great chance of knocking a window into their minds. To separate the two subjects is in many cases to give the child too narrow an outlook. Again, in speaking of the influence of geography on religious and philosophic thought, Mr. Wallis falls into the jargon of the extreme sect. What are we to make of the statement that "the thoughts of men function in relation to the environment in which they find themselves"? Philosophers think and poets dream in all climates alike.

The Home Governess. By L. M. H. SOULSBY.
(3d. Longmans.)

"Age cannot stale, nor custom tire
Its infinite variety"

is the inspiring view of teaching that Miss Soulsby offers to the intending home governess. And she has a deal of shrewd advice to offer which might profitably be taken to heart by others in the teaching profession: "The child has plenty of originality if educators will leave it alone. . . . The modern educator adds 'originality' as an extra subject, and lays sacrilegious and organizing hands on play time." Of discipline without spying: "Providence will always lead you to the spot at the critical moment if you are keen enough to deserve such help." "In punishment, as in style, under-statement is really the most effective." "If you are always self-disciplined, and only insist on points of principle, you will gain your right position in time." When Miss Soulsby speaks of religious teaching her advice is more debatable, though she does not write as though it were. "Later on the three essential books to get into every child (the italics are our own) are Dr. Robinson's *Catechism Explained*, Mr. Champneys' *Soldiers in Christ's Army*, and Bishop Gore's *Creed of the Christian*." Comment is needless. There is some stress laid on what you should teach girls—as though boys would be a very different matter—and we doubt whether the suggested table of work would satisfy even that type of family in which the governess must be careful about sending the eldest boy out of the room because "there may be an undesirable footman" with whom he may colloque. Still, any sensible governess could find inspiration and sound advice in these pages.

An Essay on Metaphor in Poetry. By J. G. JENNINGS.
(Blackie.)

It is bold for a modern writer to begin his essay with a quotation from Aristotle's *Poetics*, and occupy the first chapter almost wholly with an analysis of the famous XXI chapter of Quintilian and Longinus, with side glances at Samuel Johnson, Saintsbury, Coleridge, and other modern critics. No explanation or defence of this method of procedure is offered, and the natural conclusion we draw is that the essay, with its appendix on the use of metaphor in Tennyson's *In Memoriam*, is composed of lectures delivered by Mr. Jennings to his Indian students. Mr. Jennings is a sound scholar, and there is no fault to be found with his analysis of Aristotle; but the fact that the ancient Greeks knew no language but their own, and that philology is a modern science, is too essential to the subject to be introduced parenthetically in a quotation from Max Müller's *Lectures on Language*. In contrasting ancient and modern poetry it is essential to determine whether the metaphor is conscious or unconscious. Thus the defence of Shakespeare's sin in respect of mixed metaphors in "To be or not to be," &c., is surely to be found, not only in the beauty and uniformity of the whole speech, but in the fact that "a sea of troubles" was to him no more a conscious metaphor than "a wilderness of monkeys." So, it seems to us, the distinction between the use of metaphor in ancient and modern poetry is that Homeric and Virgilian metaphors are for the most part conventional. Tennyson paints with his eye on the object, and the "swallow-flights of song" is not only beautiful, but original. Where he fails is in attempting to draw from the world of science with which his early public were unfamiliar, and needed a commentator before they even understood the "vase of tears," shaken into frost and so broken by grief, a metaphor which, *pace* Mr. Jennings, still remains a conceit.

An Outline of Industrial History, with Special Reference to Problems of the Present Day. By EDWARD CRESSY. (3s. 6d. Macmillan.)

We live under conditions which, in the days of our fathers, and indeed in the case of some of us in our own youth, would have been thought impossible. Life in England has changed mightily even during the last sixty years. Books describing old times are often pleasant and amusing, but they have no bearing on the present and do not show us how the changes in our world have been brought about or their connexion with the past. Sound information on these questions is to be found readily in this little volume written with the express design of exhibiting historical continuity in the movements affecting English industry. Its real starting point may be said to be the beginning of the eighteenth century, the first three short chapters containing merely a sketch on the broadest possible lines of the industrial life of earlier times. So far as it goes, this sketch is generally satisfactory, though perhaps the scarcity of money during the early Plantagenet reigns is somewhat exaggerated, and we regret the use of the term "Renaissance" to mark the period of expansion which began under the Tudor monarchs; it is not appropriately used in economic history. From 1700 industrial history is treated here in "parallel chapters," or according to subjects, the facts are accurately stated and their causes and effects well exhibited, for Mr. Cressy sees and expounds them in their relations to one another and the places they hold in the evolution of modern industrial conditions. His first main division is headed "Scientific and Technical Progress," and under this he treats separately the subjects of farming and food supply, the textile industries, fuel and its application to manufacture, and the bearing of scientific research on mechanical invention. Other main divisions are "Facilities for Commercial Development," including railways, shipping, the telegraph and the telephone, together with a short and well composed chapter on banking and credit, "Industrial Management," with chapters on the relations between capital and labour, co-operation, and municipal trading, and, finally, "Industry and Politics," beginning with a chapter on the Parliamentary Reform Acts. In this chapter we note a curious confusion in stating the results of the redistribution of 1867-68. Thirty-five boroughs lost, not as here "the right of separate representation," but one seat apiece, as having a population of under 10,000, and eleven others were disfranchised, three of them with two seats and four with a single seat as under 5,000 population, and four, three of them double-seated, for corruption. Under this heading are discussed various ways in which the State directs or controls the life of the individual by the establishment of compulsory insurance, the regulation of employment, and national education, and here it may be observed that the remark that schools, apart from grammar schools and Universities, did not exist until the invention of printing is too sweeping. In a brief treatment of wide subjects an author is likely here and there to make some statement which needs qualification. This little book, however, presents little room for adverse criticism and much for commendation.

Syria as a Roman Province. By E. S. BOUCHIER. (6s. net. Oxford: Blackwell.)

Syria is the illustration on the largest scale of how captive Greece not only took captive her rude conqueror, but retained her grip on what was already hers. For, apart from administration, the Syria of the Roman Empire was far more Greek than Roman. Seven centuries, counting from the first annexation by Pompey to the Moslem invasion, Roman political dominion lasted, but it left little behind it that was distinctively Roman. Syrian literature, to which Mr. Bouchier devotes two of his best chapters, was written mainly in Greek. Education was Greek; in the fourth century Latin was hardly studied in the schools even of Antioch. Architecture was inspired by Greek models. The Roman secured peace and made roads, as the Englishman does in India, but he touched the intellectual and religious life of the people but little. Mr. Bouchier has essayed the task of describing in the compass of a small book not only that life, but the history, social condition, pursuits, and trade of the races that occupied Roman Syria. Such an aim necessitated much compression, which makes some chapters, such as that on Semitic Religions, difficult of digestion. But the book as a whole is a useful work. It contains evidence on every page of a thorough and painstaking study of the subject, and as a compendium of facts will serve the purpose alike of the student and of the general reader who wants a picture of what the East was before the blight of the Arab and the Turk came upon it. There is a list of modern authorities at the end of the book and an interesting plate of a dozen coins at the beginning. One of the best things in the work is a sketch, all too brief, of the connexion between the literature of the New Testament and the life of the times.

Collected Papers on Spectroscopy. By G. D. LIVEING and Sir J. DEWAR. (30s. net. Cambridge University Press.)

Science is not a static body of "truths," but a human acquisition, the ever-growing result of an active process. The volume under review brings home this truth with quite peculiar force, and for that reason alone may be commended to the teacher who desires to develop scientific thinking among his pupils. Beginning with quite early work (1878) on the reversal of the lines of metallic vapours, we are led to the investigation of the behaviour of helium at the temperature of liquid hydrogen (1904). The reader never forgets that he is accompanying into regions uncharted the explorers who are marking out a new track. A subordinate, yet real, argument for studying such a collection of original monographs as this lies in the interesting experimental details. Useful information, which textbook writers succeed only too well in eliminating from their manuals, is frequently found in these pages. In many instances an experimenter with modest equipment may be led to repeat for himself some of those observations which are usually attempted with costly apparatus, for the authors often used quite simple means.

Problems in the Calculus. By D. D. LIEB, Ph.D. (4s. 6d. Ginn.)

This is a collection of supplementary examples ranging over the topics usually included in an elementary course. Altogether there are about three thousand, and these are well distributed over the different parts of the subject, and well varied inside each set of examples. The book is not by any means solely intended for technical students, but the difficulty of finding really practical examples is much greater for the teacher of such students than for one dealing with the subject from an academic point of view, and to such teachers this collection will be a very great help.

Diophantine Analysis. By ROBERT D. CARMICHAEL. (5s. 6d. net. Chapman & Hall.)

"The task of the author has been to systematize, as far as possible, a large number of isolated investigations and to organize the fragmentary results into a connected body of doctrine." A considerable degree of labour has been necessary, and the skilful manner in which results already established have been arranged should be of great assistance in further research.

The Theory of Invariants. By O. E. GLENN. (Ginn.)

This textbook is based upon a course of lectures given for several years to graduates in the University of Pennsylvania. Equal stress is laid upon both the non-symbolical and the symbolical methods; the theory is developed as a whole, and the methods of Cayley and his English contemporaries have been successfully amalgamated with those of the continental school. A valuable collection of 48 examples is given for exercise, and many of these should stimulate the student to start upon original work.

Analytic Geometry. By H. B. PHILLIPS, Ph.D. (6s. 6d. net. Chapman & Hall.)

The subject is here presented as an introduction to the Calculus, and thus the equation of the second degree, although freely used to illustrate general principles, does not play such an important part as in most English textbooks of the subject. Two chapters in particular deserve attention, one on Graphs and Empirical Equations and another on Parametric Representation. The last three chapters deal with elementary solid geometry. Other subjects not usually included in a first course are vectors, periodic curves, logarithmic curves, &c. On the other hand, such subjects as harmonic ranges, pole and polar properties are excluded. The examples are excellent, especially those of an original character. Teachers who have any freedom in the choice of their syllabus will find this textbook a very great help.

Euclid's Book on Division of Figures. By R. C. ARCHIBALD, Ph.D. (6s. net. Cambridge University Press.)

This small volume is a scholarly attempt to restore Euclid's *περὶ διαίρεσεων διβλίων*, based largely upon an Arabic MS. containing a treatise on division of plain figures, expressly attributed to Euclid, which was found and translated by Woepcke in 1851. A thirteenth-century geometry of Leonardo Pisano has also been laid under contribution, while numerous other Arabic, Greek, and Medieval writers have been consulted. The foot-notes and bibliographical sketches embody much research, and the volume forms a worthy supplement to Sir Thomas Heath's great work on the Elements.

Rural Arithmetic. By A. G. RUSTON, B.A., B.Sc. (3s. 6d. University Tutorial Press.)

This book supplies a real need. Much time must have been spent in gathering the material, and the author evidently possesses not only the theoretical knowledge but also the practical experience requisite for writing a textbook on this subject of an encyclopædic character. The presentation is clear, there are many diagrams, and

the examples for exercise are numerous and well varied. In the event of a second edition becoming necessary we would point out a serious slip on page 242 where $\log \frac{1}{2}$ should be $\log .8$. Again, on page 259, it should be mentioned that the formula given for the perimeter of the ellipse is not applicable when b/a differs considerably from unity. However, these points are comparatively trivial, and altogether the book is a sound piece of work, produced, moreover, at a very moderate price.

Algebraical Equations. Second Edition, Tract No. 6. By G. B. MATHEWS, F.R.S. (2s. 6d. net. Cambridge University Press.)

In this reprint the only addition of importance is a brief summary of Prof. Berwick's work on the condition that a general quintic may be metacyclic in the field of its coefficients.

The Evolution of an English Town: Pickering, Yorkshire.

By GORDON HOME. (3s. 6d. Dent.)

This book is a welcome acquisition to a class of literature that is by no means as wide as it ought to be. It is sometimes difficult to interest people in the history of their country; but this difficulty would perhaps be overcome if we could first of all interest them in the history of their own particular district. No one who reads this book will feel that Mr. Gordon Home has not done good work in this direction. If work of a like character could be given to other districts, it would no doubt stimulate an interest which would not end with the study of a particular town, but would create the desire to fit the local history in the whole scheme of the national history. The book is well balanced, for it has enough antiquarian interest to make it readable to the student, and enough general interest for the ordinary reader. The author has done well to give us the folklore of the district, and this is not without its educational value, for in this "scientific age," when almost everything is brought down to the touchstone of reason, it is a pleasure to read what our forefathers believed, even if it was superstition; such old tales and beliefs have played a part in the mental and spiritual evolution of the nation which has too often been underestimated. The book is well illustrated, and the many drawings and photographs give an added interest to a volume that cannot be too highly praised.

"Poetry and Life Series."—*Walt Whitman and His Poetry.* By H. B. BINNS. (1s. net. Harrap.)

We would call special attention to the latest volume of this well planned and well executed series. The earlier volumes, some of them at least, were too much like anthologies, and lovers of Keats, of Coleridge, of Horace, had no need of elegant extracts. Walt Whitman, however, though he is slowly coming to his own, for the English public is still an unexplored wilderness. His works, *pace* Mr. Binns, are not easily accessible in England (the Camden edition is in ten volumes), and none of the selections (that by W. M. Rossetti dates from 1868) is satisfactory. Mr. Binns writes as a "friend and lover," and how intimately he knew Whitman is proved by his *Life of Whitman*, the best of the many memoirs and biographies. But Mr. Binns is not only a kindred spirit, but himself a poet of no mean order, and his whole-hearted admiration of the master at whose feet he sat has not blunted his critical judgment or blinded him to the feet of clay. He frankly acknowledges not only the crudities, but also the moral aberrations, of a self-made man, unschooled, and to the very end too proud to learn of past masters of the craft, and recognizes that the pure gold is buried beneath masses of scoriae and rubbish. None the less he maintains that the residue is pure gold; that there is in Whitman an original vitality, the creative power that distinguishes the major poet. The poems here quoted are sufficient in number and extent for the reader to confirm or correct this judgment. Four of the longer poems, occupying some forty pages—"The Song of the Open Road," "Out of the Cradle," "When Lilacs Last," and "Passage to India"—are given entire, besides the lyrics and lyrical extracts that are beginning to find their way into anthologies. The man will live. Whether his poems will survive and be treasured by posterity as a prototype of the poetry of the future we may question; but Mr. Binns has shown us how to read them with understanding, and convinced the most sceptical that they are worth serious study, *Leaves of Grass* no less than Pope's *Essay on Man*. Whether during the last half-century America has advanced towards that pure democracy, the land of liberty and equality that welcomes all comers, without respect of race or religion, wealth or birth, is another question, on which Mr. Binns preserves a discreet silence.

This England: an Anthology from her Writers. Compiled by EDWARD THOMAS. (2s. 6d. Clarendon Press.)

Mr. Thomas has added to the large number of existing anthologies a new one, which at least has the merit of being unusual in tone and character. It contains fragments taken largely from the less known English classics. Their significance as illustrating the title is not always obvious, Mr. Thomas's genius, and therefore his choice, being somewhat freakish; but perhaps it is a good

thing that the casual reader should be stimulated to think and wonder. Certainly it is well that he should be driven to turn to the originals for further enlightenment, or to re-read his own favourites in order to prove to himself that they would provide material for a better selection than this one. So thanks are due to Mr. Thomas and the Clarendon Press for producing this new anthology at a time when the *indirect* patriotism referred to in the preface is certainly needed to keep the balance true.

A Book of Victorian Poetry and Prose. Compiled by Mrs. HUGH WALKER. (3s. net. Cambridge University Press.)

Can there really be a demand equal to the supply of these collections and selections of prose and poetry? This *Book* (intended to accompany *Outlines of Victorian Literature*, by Prof. and Mrs. Walker) is compiled with taste, and shows a wide familiarity with Victorian literature. We rather regret that Mrs. Walker should have headed two stanzas from Meredith's *Modern Love* as if they were the whole. We think she might well have included a complete poem.

Coronata: a Book of Poems in Rhyme and Rhythm. Edited by RICHARD WILSON, D.Lit. With eight coloured illustrations. (Dent.)

This is yet another addition to the large number of anthologies which seem now to flood the market. The contents are very miscellaneous; it is indeed somewhat of a shock to come upon Hood's absurd doggerel about Sally Brown immediately after a fragment of Wordsworth's *Ode on Intimations of Immortality*. The pieces on the whole are less familiar than in many of these collections, and will give pleasure to readers.

Black's History Pictures. Edited by G. H. REED, M.A.

(10d. per set. Black.)

We can warmly recommend this series as most carefully and competently compiled and most moderate in price. The five sets cover the ground from earliest times to 1915; each set contains about 80 pictures, with explanatory letterpress. The pictures are on detachable sheets, so that they can be used to pass round a class or to pin up in a classroom. The majority of the pictures are from contemporary and authentic sources. There are also drawings and photographs of places still existing. Where the illustrations are from Calthrop's *English Costumes*, it would have been as well to quote their original source; also a few "fancy" pictures might have been omitted.

Ce que j'ai vu de la Guerre. Par JEANNE ROLIN.

(1s. 6d. Constable.)

The author, a native of the little village of Courcy, between Laon and Reims, tells for children the simple story of what happened to her and her family during the first weeks of the War. It ends abruptly with "Plus d'Allemands . . . la vie reprendra bientôt son cours normal." The story is simply and naturally told, but little has been done to adapt it for an English class of beginners. For frontispiece there is a picture of Reims Cathedral before the War, and at the end are notes entitled "vocabulaire," giving a paraphrase of the hard words; but beginners need much more—in particular a rough map. *L'airain* is not *le fer*, and Longfellow's *Village Blacksmith* is not a *charron*. We cannot help contrasting as a work of art *La Dernière Leçon* of Daudet.

(1) *The Schoolmasters Yearbook and Directory*, 1916. (12s. 6d. net.) (2) *The Public Schools Yearbook*, 1916. (5s. net.) (The Yearbook Press.)

We have merely to record the appearance of these two standard annuals with virtually no change in essentials from last year. The editors apologize for their late appearance, but the material difficulties of publication are so great that no excuse is needed. Any account of the changes in secondary education caused by the War must needs be partial and imperfect, yet we cannot but regret that any forecast has been postponed till the coming year. The War has so seriously affected higher education both in the numbers and curriculum that it is quite possible to see the trend of events and judge of the direction that these changes will take. We are grateful for the brief official account of the annual meeting held last year at the Board of Education, of which, as far as we are aware, no record has hitherto appeared in the public press. The pagination of the two books remains almost the same, and curiously enough the *Directory* is the same to a page.

A LONG Vacation Course for Students and Teachers of French will be held at University College, London, from August 7 to August 26, under the direction of Mr. Daniel Jones, M.A., University Reader in Phonetics. The Course will include lectures on the Methods of Language Teaching and on French Phonetics, together with daily ear-training exercises and practical classes in pronunciation. Particulars may be obtained from the Secretary of the College.

UNIVERSITIES AND SCHOOLS.

LONDON.

The late Mr. Stanley Boyd, surgeon at the Charing Cross Hospital, has bequeathed to the University, subject to a life interest, the residue of his estate, estimated at £10,000 to £15,000, for the purpose of a professorship in Pathology at Charing Cross Hospital Medical School.

An amendment of the regulations in Arts for internal students which will come into effect next year should be widely known among teachers. Students will not be permitted to sit for the Intermediate Examination unless they have previously shown a knowledge of Latin of Matriculation standard, tested by examination. This should encourage students in secondary schools to take Latin at the Matriculation or equivalent examination, for the apparent object is to increase the number of students who will begin their Intermediate Course in Arts with a working knowledge of one classical language.

According to its Annual Report, University College, like other institutions, has suffered from the War. The number of students fell from 2,206 in 1913-14 to 1,416 in the following session, the latter number including 123 refugee students. The revenue from fees has declined in the two sessions by £24,000, towards which a Treasury grant of £10,500 has been received. One result of the War has been to encourage effective co-operation between the various London colleges, whose staffs and classes have been depleted.

The report of the Military Education Committee of the University for 1915 affords evidence of the substantial contribution to the War which the University O.T.C. has provided. Up to the end of 1915, 2,228 cadets and ex-cadets had taken commissions, and, in addition, 273 other graduates and students had received commissions on the recommendation of the Committee. The list of honours and distinctions is most creditable, including, for former cadets, 1 V.C., 25 military crosses, 63 mentions in despatches (four mentioned twice), and 1 *médaille militaire*. 86 officers who were formerly cadets of the Contingent have fallen in the War, representing a proportion of 1 in 24, or a much higher proportion if those

only who have been to the front are taken in account. The Contingent is now restricted to persons not liable for service under the Military Service Act. I understand that practically all the medical students who have been permitted to continue their studies with a view to qualifying in the immediate future are enrolled in the University O.T.C. It is surprising to think that, seven or eight years ago, there was no military organization in the University, or, indeed, any means officially recognized of training University students for commissions. As the O.T.C. movement was taken up with equal vigour in other Universities, the value of its work in the present War must be very considerable.

Presentation Day is fixed for Wednesday, May 10, and the usual University service will be held in Westminster Abbey in the evening, the Archbishop of Canterbury being the preacher.

OXFORD.

LADY MARGARET HALL.—The following scholarships and exhibitions have been awarded:—A "Jephson" Scholarship of £60 to Freda Mary Pym, Cheltenham Ladies' College (English); a scholarship of £50 to Beatrix Warr Edwards, Clapham High School (English); an exhibition of £40 to Phyllis Dorothy Brookes-Smith, Godolphin School, Salisbury (English); an exhibition of £30 to Vera Joscelyne, Winchester and Godolphin Schools (Classics); an exhibition of £20 to Lettice Ulpha Cooper, St. Cuthbert's School, Southborne (Classics). The following scholarships will be offered at Lady Margaret Hall in 1917:—The Old Students' Scholarship of £70 a year, only given to candidates who can prove their need of pecuniary aid; the James Cropper Scholarship of £50 a year; and the Mary Talbot Scholarship of £40 a year. One or more exhibitions will also be offered should candidates of sufficient merit present themselves.

ST. HUGH'S COLLEGE.—The following scholarships have been awarded:—The "Old Students" Scholarship of £30 to Irene M. Sims, Derby High School (History); a scholarship of £25 to Evelyn Stopford, Notting Hill High School (History). The following scholarships will be offered at St. Hugh's College in 1917:—Two scholarships of £25 a year.

WALES.

The King has approved of the appointment of the Royal Commission on University Education. Viscount Haldane is the Chairman, and the choice is a good one because of his experience in connexion with the

University Commission.

University of London and his wide knowledge of the problem of higher education. The three Commissioners who may be said to represent the standpoint of Wales are Sir Henry Jones (of Glasgow University), Sir Owen M. Edwards, and the Hon. W. N. Bruce, and their appointment is generally welcomed in University circles. Sir William Osler's inclusion in the Commission is a guarantee that the claims of medicine will be carefully and sympathetically considered, and, as the genesis of the Commission is traceable to the difficulties in connexion with the Medical School at Cardiff, it is only right that due prominence should be given to this question. We are also pleased that Miss Emily Penrose, Principal of Somerville College, is on the Commission, as the University of Wales has recognized to the fullest degree the rights of women to all the privileges of higher education.

The terms of reference are as follows:—"To inquire into the organization and work of the University of Wales and its three constituent Colleges, and into the relations of the University to those Colleges, and to other institutions in Wales providing education of a post-secondary nature, and to consider in what respects the present organization of University education in Wales can be improved and what changes, if any, are desirable in the constitution, functions, and powers of the University and its three Colleges."

It will be seen that they are very wide and comprehensive in character, and that every aspect of University education can properly come within the consideration of the Commission. One of the questions that is certain to be discussed is the relation of the University to the technical colleges which are already in existence in the Principality. Some years ago the Swansea Council made a strong effort to secure the privilege of affiliation for its local institute in the departments of science, metallurgy, and engineering, but no progress was made. There is no doubt that the appointment of this Commission will give them another opportunity of enforcing their claims, and it is probable that the Commission will be inclined to regard them sympathetically.

An interesting Conference has just been held at Cardiff on the

Moral Effect of Kinemas.

subject of the moral influence of kinemas on the rising generation, and to consider what steps should be taken to "secure that the performances should be of the highest and best character possible."

From the newspaper reports, one gathers that the speakers were unanimous in their condemnation of several films which have recently been exhibited on account of their immoral tendency and their sensational character. A resolution was ultimately passed that all films should be censored by a Government Department. The kinema problem, of course, presents no special features in Wales, but it is encouraging to find that at last the public generally is becoming alive to some of the undoubted dangers attending the unrestricted display of films.

It is regrettable that no teachers were invited to state their views on the question at the Conference, as they are naturally deeply interested in the question, as it is one affecting the moral and intellectual progress of their pupils. Moreover, they have given very special attention to it, and they could have given the Conference real guidance.

IRELAND.

The War dwarfs all other topics at present, and opens so many channels to the public energy and expenditure that other fields of labour must needs suffer—education amongst the rest. There is little new activity in the educational world. The Universities pursue their work, but their numbers are more or less diminished, and the thoughts of their students are diverted from the learning of the past to the life of the present. Trinity College has just completed the publication of its official War List—a list which is still growing and must be added to day by day. It contains over 2,200 names; of these, 130 are of those who have fallen in action or succumbed to wounds or disease, while 115 have been wounded. Between 500 and 600 students of the Queen's University have been drawn into the War.

The Wray Prize, the chief distinction awarded in metaphysics in the undergraduate course in Trinity College, has just been gained by a woman student, Miss E. Moore.

At the last meeting of the Senate of Queen's University, Prof. Johnston Symington was chosen to represent the University on the

JOHN DAVIS

(Successor to **THOMAS LAURIE**),

12 Paternoster Row, London, E.C.

General Medical Council, in succession to Sir William Whitla, who has retired. The Senate decided that the University should take part in the Tercentenary Shakespearean celebrations in Belfast.

The Royal College of Science in Dublin loses a valued member of its teaching staff through the appointment of Prof. Gilbert Morgan, D.Sc., F.R.S., to the Chair of Chemistry in the Technical College of the City and Guilds of London Institute in Finsbury.

The returns of the collections made by the Gaelic League throughout the country during "Language Week" in March are not yet complete, but so far they go to show that the work of the League has not suffered as much as might have been expected from the general depression of all things (except prices) at the present moment. A special work has been organized and is already being put into effect in the Gaelic-speaking districts in order to save the language still living there from the fate which has befallen it elsewhere, and a special fund has been raised for the purpose. Another sign of activity is the establishment of a new monthly entitled *An Lóchrann (The Lamp)*, written wholly in Irish.

There has been a slight friction lately between the Gaelic colleges and the League owing to a circular issued by the League calling a meeting for Easter Tuesday to establish a Conference of the Irish Colleges. As the Colleges are not in any way under the authority of the League, and have already a Conference, which meets from time to time to settle matters of mutual concern, they resented the step and declined the invitation. Such a misunderstanding may be regrettable, but it hardly amounts to what the *Irish Times*, in a notice, called it—a "Split in the Gaelic Camp."

PRIZE COMPETITIONS.

The award of the Translation Prize for April is unavoidably postponed.

A Prize of Two Guineas is offered for the best translation of the following extract from Victor Hugo's Letters:—

Je vous écris d'Anvers, cher Louis, c'est tout vous dire ; je suis

en pleine Flandre, à même les cathédrales, les Rubens et les Van Dyck. C'est un admirable pays.

Hier j'étais au haut de la flèche de cette merveilleuse cathédrale, et je pensais à vous. Je pense à vous toutes les fois qu'une chose contient un tableau ou une pensée.

Je voyais, du même regard, devant moi la mer et Flessingue à vingt-deux lieues, à gauche la Flandre et les tours de Gand, à droite la Hollande et la flèche de Bréda, derrière moi le Brabant et le clocher de Malines ; puis l'Escaut, large et brillant au soleil, et, entre la mer et l'Escaut, les polders inondés, une prairie de cinq lieues de tour changée en lac, à droite une autre prairie toute verte et scintillante de maisons blanches ; à mes pieds les quelques toits de la tête de Flandre bloqués par l'eau ; sous moi Anvers, qui est, au dix-neuvième siècle, comme était Paris au seizième, un amas magnifique d'églises et d'hôtels, de toits taillés, de pignons contournés, de clochers carrés et pointus, avec mille accidents de tourelles et de façades étranges ; de grosses vieilles maisons amusantes, qui sont la Boucherie, qui sont la Draperie, qui sont la Bourse ; un devant d'hôtel de ville qui ressemble à une architecture de Paul Véronèse, un portail d'église qui ressemble à un fond de Rubens et qui est de Rubens ; mille voiles sur l'Escaut ; dans un coin du paysage le chemin de fer où disparaissait un convoi de wagons, près du chemin de fer une grande étoile de gazon couchée à plat sur le sol qui est la citadelle, enfin au-dessus de tout cela un ciel de nuages déchiquetés comme dans Albert Dürer avec un beau rayon de pluie qui tombait au loin ; voilà ce que je voyais hier, en regrettant que vous ne le vissiez pas.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by May 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

DENT'S NEW BOOKS

FURTHER STEPS IN FRENCH. By Prof. WALTER RIPPMMANN, M.A.

Crown 8vo, Cloth. 2s.

This book completes the two years' course, of which "First Steps in French," published in 1915, was the first part, and which lays a secure foundation in Vocabulary and Grammar. Both volumes have been illustrated by Mr. FRED TAYLOR.

A FRENCH NOTE BOOK. By C. E. HODGES, M.A. Fcap. 4to. 1s. 9d.

Specially arranged for use in connexion with Berthon's "Première Grammaire Française."

THE OLD TESTAMENT FOR SCHOOLS. By Canon MORLEY STEVENSON, M.A.,

Principal of Warrington Training College, and C. W. BAILEY, M.A., Head Master of the Holt Secondary School, Liverpool. 544 pages. Crown 8vo. 2s. 6d.

Contains the Bible narrative in historical sequence, from which has been removed all incidents and terms unsuitable for children's reading.

COMPOSITION THROUGH READING. (INTRODUCTORY COURSE.)

By F. PICKLES, M.A., Head Master of St. George Secondary School, Bristol. Crown 8vo. 256 pages. 1s. 3d. net.

Uniform with the same author's "Composition Through Reading," Books I and II. Provides a complete Course of Composition work for a Junior Form.

A STUDENT'S HEAT. By IVOR B. HART, B.Sc., F.R.A.S., Author of "Elementary Experimental Statics." Crown 8vo, Cloth. 4s. 6d.

This book presents as much as is possible of the subject without the use of higher mathematics. The ground covered is approximately that required for the Pass Degree Examination of most of the Universities.

A.M.A.—"We have seen no better book on the subject at so moderate a price."

Three New Books by Dr. RICHARD WILSON, Editor of "Laureata," "In Golden Realms," &c.

Each Book 256 pages, Crown 8vo, 1s. 6d., and containing Eight Coloured Illustrations.

CORONATA.

A Book of Poems in Rhyme and Rhythm.

A selection of Poems and Rhythmical Prose Passages from Shakespeare to the present day. Arranged in chronological order. May be used as a companion to a first course in English poetical literature.

Great care has been taken with the external production of these volumes, with the result that none of the books has any suggestion of school about it.

STORYTELLERS' HALL.

A Reading Book for Junior Forms.

A varied collection of narrative material of an imaginative character which can be used to form an introduction to literature. The stories are drawn from all countries, and include much fresh material from Russian and Hindu literature.

TREASURE TROVE.

A Reading Book for Middle Forms.

Introduces the pupil to a number of books which might be passed over as "too schooly" if the searcher for literary treasure were left to himself. It is hoped that the passages selected will create a strong desire to read the books from which they are taken.

J. M. DENT & SONS, LTD., ALDINE HOUSE, BEDFORD STREET, W.C.

The opening up of a NEW CONNECTION.

If particulars of YOUR SCHOOL are included in the next issue of

PATON'S LIST of SCHOOLS and TUTORS

they will be seen by thousands of Parents seeking Schools.

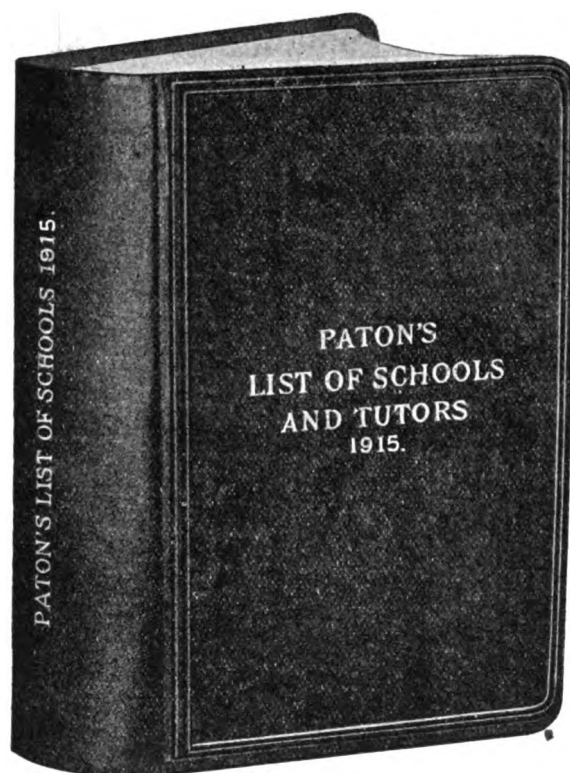

"There is an absolute necessity for advertising; there is a great eagerness to compete for attention, and no one gets it unless it is by giving, as it were, so many strokes of the hammer, one after the other, to compel people to notice what is going on."—W. E. GLADSTONE.

THIS BOOK secures a far larger proportion of *definite results* than any other publication of its kind.

OFFICE OF THE
DEPUTY PUBLIC TRUSTEE,
Manchester.

19th January, 1916.

"I am directed by the Deputy Public Trustee to thank you for the copy of your List of Schools, which he desires me to say will prove exceedingly useful to him in connection with the administration of many estates."

"The majority of my boys come, of course, from personal recommendation, but I may say that of those who come as a result of advertising, practically all have heard of the school through your List of Schools."

HEAD MASTERS or HEAD MISTRESSES wishing to have their Schools included in the *Nineteenth Edition*—which is just going to press—should apply *at once* to

J. & J. PATON, Educational Agents,

OXFORD AND CAMBRIDGE LOCAL EXAMINATIONS, JUNIOR AND SENIOR.

Mathematics and Science.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., and A. BARRACLOUGH, M.A. 2s. 6d. With Answers, 3s.

"Maintains the high standard of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association*.

Algebra, The School. By A. G. CRACKNELL, M.A. B.Sc., F.C.P. With or without Answers, 5s.
Also in two parts. Part I. 2s. 6d. Part II, 2s. 6d.

"The book is compiled in accordance with the latest views on the teaching of Algebra, and we have rarely come across a clearer or more satisfactory exposition of subject-matter."—*The Journal of Education*.

Arithmetic, The Junior. Being an adaptation of *The Tutorial Arithmetic* suitable for Junior Classes. By R. H. CHOPPE, B.A. With or without Answers, 2s. 6d.

"Just as good a handbook on Arithmetic as the student can desire."—*Nature*.

Arithmetic, The School (Senior Local Edition). By W. P. WORKMAN, M.A., B.Sc., Head Master of Kingswood School, Bath. 3s.

Adapted from *The School Arithmetic* for the Oxford and Cambridge Senior Local Examinations.

"The best Arithmetic for Schools on the market."—*Mathematical Gazette*.

Botany, Junior. By Prof. F. CAVERS, D.Sc., F.L.S. 2s. 6d.

"Dr. Cavers has achieved a useful little book."—*Journal of Botany*.

"A very excellent volume. Practical to a high degree. The diagrams are very good."—*Schoolmaster*.

Botany, The Senior. By F. CAVERS, D.Sc. 4s. 6d.

"There is abundance of experiments, with useful practical hints and directions . . . the volume is evidently the work of an accomplished teacher."—*Educational Times*.

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. *Second Edition*. 2s. 6d.

"The results of fifteen years' experience of a thoughtful teacher are always valuable, and, as one might have anticipated, the book offers a thoroughly sound course of practical instruction."—*Nature*.

Chemistry, Senior. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. 4s. 6d.

"We can commend the book to any student requiring a sound and clearly written textbook."—*The Journal of Education*.

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. 2s. 6d.

"A simple treatment of the elements of geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster*.

Geometry, Theoretical and Practical. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc.

PART I. Covering Euclid I, III (1-34), IV (1-9). 2s. 6d.

PART II. Covering Euclid II, III (35-37), IV (10-16), and VI. 2s.

PART III. Covering Euclid XI. 1s. 6d.

"One of the best books on modern lines."—*Oxford Magazine*.

Heat, Junior. By J. SATTERLY, D.Sc., M.A. 2s.

"A good practical course. The diagrams are very clear, and the subject-matter all that could be desired."—*Schoolmaster*.

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and J. SATTERLY, D.Sc., M.A. 2s. 6d.

"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.

Science, Junior Experimental. By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. *Second Edition*. 2s. 6d.

"An excellent and workable two years' course in Experimental Physics and Chemistry."—*Educational News*.

Languages, History, and Geography.

English Composition, Junior. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 1s. 6d.

"This excellent manual makes plain for the young pupil the essentials of good writing. A distinctly workmanlike production that can be heartily recommended as one of the best of its kind."—*Education*.

English Composition, Senior Course of. By E. W. EDMUNDS, M.A., B.Sc. 2s. 6d.

"Excellent devised and arranged."—*School World*.

"Teachers of English will find this a very useful book for practical classroom purposes."—*Schoolmaster*.

English Grammar, Junior. With Parsing and Analysis. By A. M. WALMSLEY, M.A. 1s. 6d.

"The work of a practical teacher who knows the value of compromise between the old and the new methods."—*Journal of the Assistant Masters' Association*.

English Verse An Anthology of. For use in Schools and Colleges. By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. *Second Edition*, Enlarged. 2s. 6d.

"The selections are admirably fitted for the purpose of presenting the course of English verse through the centuries."—*Literary World*.

English Prose, An Anthology of. For use in Schools and Colleges. By S. E. GOGGIN, M.A., and A. R. WEEKES, M.A. 2s. 6d.

"This anthology of English prose is compiled with abundant good sense. Within its limits the choice of writers could not well be bettered . . . a very useful book."—*Saturday Review*.

French Course, New Junior. By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 2s. 6d.

"The short extracts are well chosen. With a capable teacher we have no doubt that this would prove a useful textbook."—*The Journal of Education*.

French Reader, New Junior. By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. 2s.

"Consists of well-chosen literary extracts in French."—*Education*.

French Course, Senior. By Professor ERNEST WEEKLEY, M.A., and C. GILLI, B.A. 3s. 6d.

This Course is designed for candidates preparing for the Senior Local Examinations. The text is substantially that of Professor Weekley's *Matriculation French Course*, but the exercises and passages for translation into French are different.

"A really excellent textbook."—*Teachers' Times*.

Geography, Junior, 1916-17. Including Outlines of Physical Geography, the British Isles, and Europe. By G. C. FRY, M.Sc. 2s.

"A useful and well arranged elementary work."—*Guardian*.

Geography, Senior, 1916-17. Including Principles of Physical Geography, the British Isles, and Europe. From the *Textbook of Geography* by G. C. FRY, M.Sc. 2s. 6d.

"Mr. Fry brings out the fascination of the broad view of geography."—*Literary World*.

History of England, School. By M. E. CARTER, Honour School of Modern History, Oxford. 3s. 6d.

Also in three parts as follows:—I, to 1603; II, 1485 to 1714; III, 1660 to 1910. 1s. 6d. each.

"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.

Latin Course, New Junior. By J. V. THOMPSON, M.A., and LL. M. PENN, M.A. 3s. 6d.

"Admirably unites the more modern methods of teaching with those which have long stood the test of time."—*Educational News*.

Latin Course, Senior. By A. J. F. COLLINS, M.A., and A. ROBINSON, B.A. 3s. 6d.

"Carefully planned and most capably worked out."—*Educational Times*.

"The book is business-like and well arranged. The examples for translation into Latin Prose are specially well chosen, and serviceable vocabularies are provided."—*Guardian*.

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics, Stockholm).

The College was opened in 1885, and was the first of its kind in England. Students are prepared to be teachers of Scientific Physical Education on Ling's Swedish System. The Course extends over two years. It includes the study of Anatomy, Physiology, Theory of Education; the Theory and Practice of Gymnastics, Massage and Medical Gymnastics, Dancing and Outdoor Games. Students practise teaching in schools in the neighbourhood. The College stands in its own ground of 15 acres, in a beautiful and healthy locality close to Dartford Heath.

The demand for mistresses of physical training holding the Diploma of this College is at present far in excess of the supply.

The course begins in September. Further particulars may be obtained on application to the SECRETARY.

BERGMAN ÖSTERBERG UNION OF TRAINED GYMNASTIC TEACHERS.

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

Good Posts obtained after Training.

A Series of Practical OBJECT LESSONS

on familiar things in daily use, showing how they are manufactured. They include **ACTUAL SPECIMENS** of the several substances and products in their various stages of progression from the raw material up to the perfected condition for use. The whole series is compiled to illustrate in a practical manner many of the manufactures and productions of Great Britain and her Colonies, and are specially adapted for educational purposes.

EACH SET OF PROCESS SPECIMENS ON CARDS, 18 by 12, with Teachers' Notes, 2/6,

as follows:—

BRUSHES, "and how they are made," with explanatory notes, and specimens of bristles, fibre, bass, whisk, cane, the woods, &c., showing the substances in the several stages of manufacture, including a brush partly made, and exhibiting the mode of threading the bristles, &c. ... 2/6

COMBS, "and how they are made," with explanatory notes, and specimens of natural horn, showing the substance in the several stages of manufacture as partly made and completed, and polished comb ready for use ... 2/6

COTTON, "and how it is made," with notes and specimens of native cotton from the pod upwards, in its several conditions of spinning, manufacture, and dyeing, &c., to perfected sewing cotton, ready for use ... 2/6

GLASS, "and how it is made," showing the sand, potash, and other materials of which glass is composed, and specimens of the fused composition in the several stages of melting, &c., up to the perfected substance, with explanatory notes of glass manufacture ... 2/6

LEATHER, "and how it is prepared," with specimens of lamb skin and sheep skin dressed, dyed, tanned, grained, glazed, enamelled, hide tanned for boot soles, with explanatory notes on the several processes of tanning, tawing, currying, &c., by C. W. B. Burdett, Head Master, Leather Trades School, London ... 2/6

PAPER, "and how it is made," with explanatory notes on the art of paper-making, including specimens of wood pulp, hay, straw, esparto, and other vegetable fibre of which paper is made, with 20 samples of the various papers manufactured from the foregoing materials ... 2/6

PENCILS, "and how they are made," with specimens of graphite (or black lead) and cedar wood, showing the grooving, fitting in, polishing, and other processes in the manufacture of a cedar pencil, and explanatory notes ... 2/6

POTTERY, "and how it is made," with specimens of the materials used in its manufacture, including sketches of the pug mill, mixing machines, and potter's wheel; showing the making up of china ware from the crude clay to a perfectly finished plate ready for use. 2/6

RUBBER, "and its manufacture," with sketches made at Kew Gardens showing the methods of collection, the utensils in use, indicating the countries in which it is found and the purposes to which it is put, with samples of natural and prepared rubber, and other specimens ... The set, 2/6

SILK, "and its production," with explanatory notes on the manufacture of the silk from the cocoon to the silk thread, ready for use, with specimens of the same in its various processes of manufacture ... 2/6

SPONGE, "what it is and how it is procured," with 16 samples of native Egyptian, Florida, Cuban, and other sponges, from the Mediterranean, Florida, Gulf of Mexico, and the West Indies, with complete explanatory notes as to what sponge really is, the nature, definition, variety, and uses of the several kinds, with their geographical distribution ... 2/6

WOOL, "and its production," exhibiting its manufacture from the fleece of the sheep, step by step, to the finished yarn, in readiness for knitting, with accompanying notes for teachers' use ... 2/6

ILLUSTRATED CATALOGUE POST FREE.

COX & CO., New Oxford St., London.

SOUTHPORT PHYSICAL TRAINING COLLEGE.

Beautifully situated near the Sea in healthy surroundings.

President:

Admiral Lord CHARLES BERESFORD, K.C.B., M.P.

Principals:

A. ALEXANDER, F.R.G.S.; Mrs. ALEXANDER.

The Staff consists of Medical Lecturers and experienced teachers in every branch of Physical Training, including a Swedish Mistress from the Royal Gymnastic Institute, Stockholm.

GIRLS of good education are trained as scientific teachers of Physical Training to qualify them for appointments as Gymnastics, Games, and Health Mistresses in schools and colleges. The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Play-Ground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

The Senate Edition.

"La Guerre," Vol. II.

A French Reader, compiled from articles upon the European War selected from the leading French Newspapers. With Notes on Idioms by TAYLOR DYSON, M.A. 10d.

The subject matter of this Reader, from its retaining interest, leads the student unconsciously to a better knowledge of modern French construction. Many of the articles are of a conversational nature, and of the greatest value as supplying a means of acquiring a fuller vocabulary and a better knowledge of the subtleties of the language. Volume I is in use at all the great Public Schools.

Messrs. TRUMAN & KNIGHTLEY introduce University and other qualified English and Foreign Mistresses and Teachers of Special Subjects in Secondary, Public, and Private Schools. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

ASSISTANT MASTERS AND TUTORS.

Messrs. TRUMAN & KNIGHTLEY introduce University and other qualified English and Foreign Masters and Tutors to Schools and Private Families. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

LADY MATRONS AND HOUSEKEEPERS.

Messrs. TRUMAN & KNIGHTLEY introduce well qualified and experienced Lady Matrons and Housekeepers to Boys' and Girls' Schools. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

TRANSFER OF SCHOOLS AND PARTNERSHIPS.

Messrs. TRUMAN & KNIGHTLEY undertake all negotiations connected with the Transfer of Schools and Partnerships. All communications are treated in the strictest confidence. *No charge is made to Purchasers, and no charge to Vendors unless a sale or partnership be effected by this Agency.*

Any negotiations entrusted to Messrs. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

With 14 Plates (10 in Colour), showing Commercial Documents in facsimile, and a Folding Industrial Map of the World.

COMMERCIAL ARITHMETIC & ACCOUNTS.

A. RISDON PALMER, B.A., B.Sc.,

Head of the Matriculation Department,
The Polytechnic, Regent St., London.

BY
AND

JAMES STEPHENSON, M.A., M.Com.,

Head of the Higher Commercial Department,
The Polytechnic, Regent Street, London.

Ready early in June. Part I, 2s. net; with Answers, 2s. 6d. net. Part II, 2s. net; with Answers, 2s. 6d. net. Also Parts I and II in One Volume, 3s. 6d. net; with Answers, 4s. net. **In preparation:** Part III, 2s. net. Also the complete book, 5s. net. *[Bell's Mathematical Series for Schools and Colleges.]*

This work is designed to cover the ground of examinations requiring a knowledge of commercial processes, such as those of the Lancashire and Cheshire Institutes, the Society of Arts, &c. In each section the mathematical principles are carefully explained, and copious "drill" examples are set. Following on these come "applicational" examples, drawn for the most part from actual commercial transactions, and not evolved *ex cathedra*.

As instancing some of the sources of these commercial questions may be quoted the fact that foreign records of commercial transactions (Russian, Japanese, French, Portuguese) have been freely consulted.

The mathematical methods given are, as far as possible, in accordance with the spirit and recommendations of the Mathematical Association.

A special feature of the work lies in the varied selection of commercial documents of all kinds, which are reproduced in facsimile.

REVISION PAPERS IN ARITHMETIC.

For the Oxford and Cambridge Local Examinations, County Council Examinations for Minor Scholarships, &c. By CHARLES PENDLEBURY, M.A., late Senior Mathematical Master of St. Paul's School. Crown 8vo, cloth, 1s.

The scheme of this book is designed to provide a well-graduated, comprehensive examination course up to the standard of the Oxford and Cambridge Locals.

A CONCENTRIC GRAMMAR COURSE.

By DULCIE E. HAES, Brondesbury and Kilburn High School for Girls. Crown 8vo, with a Chart in Colours, 1s. 6d.

This new textbook comprises a complete six years' course, planned to cover the ground of examinations up to the standard of the London Matriculation. A feature of the book is the carefully designed chart, in which is crystallized the subject-matter of the book.

TEST PAPERS IN MATHEMATICS FOR SECONDARY SCHOOLS.

For the period of the War these Test Papers will be issued once a Term (on March 1st, July 1st, and November 1st), instead of monthly as previously.

The July Papers, by C. O. TUCKEY, M.A., Head Mathematical Master, Charterhouse School, will be issued on July 1st.

Subscription, 1s. 6d. net per annum, post free (three issues). Single issue, 7d. net. Any one paper can be had for purposes of class distribution at the rate of 1s. 6d. for 25.

BELL'S SHAKESPEARE FOR SCHOOLS.

Edited by S. P. B. MAIS, M.A. Pott 8vo. With numerous Illustrations, from original Drawings by BYAM SHAW. 1s. each.

NEW VOLUMES (NOW READY).

Henry V. Richard III. Romeo and Juliet.

"The general introduction to this series is full of life and spirit. To catch the Elizabethan spirit and see Shakespeare as he really was seems to be its keynote. There is a valuable chapter on the state before Shakespeare, and well-selected extracts from Johnson's 'Preface to Shakespeare.' Notes, hints, and questions are added, making complete a well-conceived textbook."—*Educational News.*

Two New French Readers by Marc Ceppl.

RÉCITS HÉROÏQUES.

By CHARLES GUYON, Inspecteur d'Académie Honoraire. Edited, with Questionnaire and Vocabulary, by MARC CEPPL. With 16 Illustrations. With or without Vocabulary. 1s. 6d. net.

These stories are reprinted from the "Série héroïque" of "Les livres roses pour la jeunesse," which aims at presenting before French children authentic facts and anecdotes relating to the great War which is now being waged. The French Minister of Education was so struck by the value and usefulness of the books that he caused a large number to be purchased and presented to the libraries of schools and colleges throughout France.

L'HISTOIRE DE PETER PAN.

Par DANIEL O'CONNOR, d'après la pièce de Sir J. M. BARRIE. Traduction en français par MARC CEPPL. Crown 8vo. With 12 Illustrations and Questionnaire. With or without full Vocabulary. 1s. 6d. net.

Mr. Daniel O'Connor's prose version of this delightful fairy play has attained so wide a popularity that no apology is needed for its appearance in this new guise. Translated into simple French, and illustrated by a selection from Miss Alice Woodward's well-known drawings, it should find as many new readers in the schoolroom as have already welcomed it in the nursery.

OCCASIONAL NOTES.

AS in the days of Brougham, the schoolmaster is abroad, and everywhere we hear of Reform Committees and Conferences, but, as far as we have observed, there is no sign that the need has come home to the nation, as it did to Prussia after the War of Liberation, and to France after the defeat of Sedan. We may even say that, in the Ministry of All the Talents, education is the last thing considered, and our present Minister of Education, excellent as he is, was selected for a wholly different purpose. The fact is that, defective as is our national system of education, it is framed on a sound basis, and there is nothing in it that might not be remedied and made good by Departmental reforms. The crying need is for a more liberal expenditure, and the watchword of the day is economy. As to what is needed, there is among educators a growing consensus of opinion, but among County Councils, and those who hold the purse-strings, the one demand is for thrift and lower rates. Continuation schools, universal education up to at least fourteen, smaller classes in primary schools, better salaries for secondary masters and mistresses, more scholarships for the *élite* of our primary schools, universal training of teachers—these are a few of our acknowledged gaps and deficiencies. But we have still to be convinced that any good purpose would be served by the appointment of a Royal Commission. The members who would naturally be found on such a commission are already fully occupied, and there is the Teachers' Registration Council, which, as we have shown elsewhere, is now undertaking some of the spade-work that is needed and co-operating with the Board of Education. If we carry on as at present, and see that there

there is no relaxation or false economy, we may well wait for happier times to set about a great national reform.

THE claim of the classics has been put forward in a moderate and broad-minded letter to the press, signed by twenty-three distinguished men, only one or two of whom are connected professionally with the teaching of the subject, while six of them are scientists. The necessity for the study of scientific method as distinct from science is clearly insisted on. The signatories urge—and it is a vital point—that the two things are not the same. We may study physics and chemistry without getting a grasp of scientific method, and we may study law, history, classics, politics, or anything else, in a scientific manner, and acquire thereby exact knowledge and cultivate clear thought. This view is certainly open to the construction that, while scientific method is essential, science as a body of knowledge is not essential, and this has prevented Prof. Bateson from signing the document without reserve. The study of Greece and Rome, the signatories believe, must always have "a large part" in a broad human education, but they claim for it no "artificial privilege." This we interpret to mean that they are prepared to give up compulsory Greek, a view with which several of the signatories are already associated. It is a sound doctrine, and argues a living faith in the vitality of the classics as something which can be safely trusted to stand on its own legs.

NOR were the demands put forward by the Committee on the Neglect of Science at the Burlington House meeting unreasonable. The first was that "the natural sciences should be made an integral part of the educational course in all the great schools of the country." The sting of this resolution lies, no doubt, in the word "great," for in all grant-earning schools physical science is already an obligatory subject. No one would object to the extension of the principle to schools which are not under the Board of Education. The next suggestion was that natural sciences "should form part of the entrance examination of all Universities." This we suppose to mean that science ought to be obligatory. The scientists, therefore, are demanding compulsory science just as the humanists are giving up compulsory Greek. But there is certainly a stronger case for the former than for the latter. Between science and Greek there lies all the difference between an intellectual necessity and an intellectual luxury. Some knowledge of the elements of the one is needed by every one who wishes to have an intelligent apprehension of the world in which he lives, and of what is going on around him; but we cannot say that of Greek. The third demand of the Committee is that in competitive examinations for the Civil Service "capital importance should be assigned" to the natural sciences. The phrase is studiously vague, and might with equal justice be applied to modern languages, history, politics, and political economy. If it means that a knowledge of chemistry and physics should be the decisive factor in a candidate's success, the scientists are asking too much. Whether a knowledge of science should be demanded from all entrants to Sandhurst is a question we must leave to military men.

MR. ARTHUR ACLAND had something to say about science in the public schools when he

received a party of M.P.'s at the Imperial College of Technology. Public-school men, he said, were frequently insufficiently grounded in the rudiments of scientific training. Not enough time was given to this work at the big schools, and too much to Latin and Greek. The head masters were classical men, and could not see the value of science to the Empire. Mr. Acland, we need hardly say, educated as he was at Rugby and Christ Church, is a pure-bred public-school and 'Varsity man. He did not discuss at any length the causes of the failure in training of which he spoke. One cause is undoubtedly the faulty organization of the "modern side," the curriculum of which is usually a mere jumble of heterogeneous subjects, needed for examinations. What is wanted is a department inspired by some definite educational ideal—scientific, may be, in one school, modern humanistic in another.

Daylight Saving. TO the stubbornly conservative Englishman the War has brought many surprises, and the Summer Time Act is not the least. Who would have thought that we should have agreed, with scarcely a dissentient voice, to alter our clocks at the bidding of a Minister? To boys and girls the Act will be an unmixed boon. They will get up earlier in the morning, begin school earlier, and leave off earlier. They will have less work during the afternoon, the hottest and heaviest part of the dog days, and they will have a longer period of leisure between the end of school and the coming on of twilight. If, in consequence of the change, they acquire a habit of getting up earlier, the gain to the nation will be great. In recent decades our hours have been getting worse and worse. Most travellers passing through France on their way to Switzerland must have been impressed by the contrast between London and Paris. In Paris by 8 a.m. shops and *cafés* are in full swing, and all the world is stirring. In London at the same hour we have hardly begun to take down shutters, and a taxi is unprocureable.

Shakespeare. THE Shakespeare Tercentenary has been duly celebrated. There was a formal function at the Mansion House and an all-star performance of "Julius Caesar" at Drury Lane, the Roman play being preferred to one more strictly national, probably because it gave the best chance to the largest number of stars. Various performances of more or less merit in other London houses followed. Of somewhat greater interest was a revival of the "Poetaster" by the Elizabethan Stage Society. Speeches innumerable glorifying every aspect of Shakespeare's art were made. A popular actor got a knighthood. Shakespeare Day was observed in the London schools, where docile children were lectured on the duty of honouring Shakespeare. It was more to the point, perhaps, that they got a half-holiday. The whole thing has left upon our minds an impression of artificiality, of a kind of forcing-house for the appreciation of Shakespeare. For, if we really cared about Shakespeare, we should not be content to listen to speeches about him or even seeing him acted. We should act him ourselves. In every considerable town in the British Empire there would have been an amateur performance of at least a portion of one of the plays. Do not let it be said that we cannot think of such things in war time. Those who love literature turn to it in these

days of stress as the best possible relief. And the shillings of the audiences with which the houses would have been crowded might have been a substantial contribution to the Shakespeare National Theatre, of which we have recently heard so little.

Shakespeare in Schools. SCHOOLMASTERS and mistresses are frequently rebuked—most frequently by those who know nothing about schools, but sometimes by others—because they do not succeed in inspiring children with an interest in Shakespeare. Many of them have no doubt pondered over the question how such an end is to be achieved. It is a great adventure, but it is not without a certain risk. There is always the possibility that the effect of the introduction of great literature, especially poetry, into the classroom will be just the opposite of what is desired. If thousands of men and women owe their taste for poetry, in some part at least, to their teachers, thousands of others trace their distaste to the same source. Certainly in many schools the treatment of Shakespeare has vastly improved in recent years. It has become more literary and more human; "the play's the thing" nowadays, and not grammar or philology. To those teachers who, while working on modern lines, are still anxious about the results of their work, we would relate two simple anecdotes. To the young enthusiasts of Oxford in the first days of the University Settlement movement the advice given by a venerable dignitary of the Church was, "Take a hint from the match-boxes, and rub lightly." At a dinner given to a distinguished foreign educationist, he was asked by the proposer of his health to say how he would inspire children with a respect for Wordsworth. To this perplexing conundrum the only answer given was, "Dose them with him but sparingly."

"History." THE Historical Association has followed the example of similar bodies, and established a quarterly journal. The principal contents of the first number of *History* are the papers read at the January meeting—that on Imperial History by Sir Charles Lucas and those on Naval History by Mr. Julian Corbett and Mr. H. W. Hodges—and a vigorous onslaught on the scientists by Prof. Pollard. It is an odd coincidence that the Professor's paper should appear within the same covers as Sir Charles Lucas's discourse, for one of the points of the latter is the need for more teaching about the history of science and scientific inventions. "What a two-penny half-penny thing is a Reform Bill compared with railways," says Sir Charles; "What has science to do with politics?" is the burden of Prof. Pollard's prophecy. The difference is no doubt merely superficial, and we may be sure that the Professor would not deny the need for statesmen to be awake to possible developments of science, such as aviation, which may affect politics. Mr. Pollard's paper is a valuable statement of the case for a knowledge of history as essential to an intelligent understanding of contemporary affairs, and particularly instructive to any one who wishes to keep his head cool in times of crisis, defeat, or failure. For those who think things are going slowly or going badly, how encouraging it is to read that in 1809 the Common Council of London protested against Wellington receiving any distinction for his victory at Talavera, on the ground that he had shown, "with equal rashness and ostentation, nothing but a useless valour."

THE most noticeable point in the address of Mr. C. W. Crooks, the incoming President of the N.U.T., was perhaps his declaration against universal free education.

**The President of
the N.U.T.
on Education.**

The abolition of fees in secondary schools would, he believes, increase the cost to the State without increasing the efficiency of the school. He wants the secondary schools "purged from paying dullness," and he sees that nothing would be gained by introducing non-paying dullness. In the matter of the curriculum he leans toward the extension of science teaching, and advocates specially gardening and hygiene. But these, as taught in elementary schools, are not sciences. Gardening is an art, and hygiene is a miscellaneous collection of useful information. Hygiene cannot be taught as a science unless physiology is taught as a science, and that is scarcely possible in schools. Hygiene as a central subject does not attract us; we do not want children to spend several hours a week staring, Buddha-like, at their own stomachs. With Mr. Crooks's objection to the introduction of military drill into elementary schools we cordially sympathize, not because we are afraid that it would create "a savage race craving for war" (military service has not done that anywhere, not even in Germany), but because we fear that it would encroach upon the already too limited time given to games and other forms of physical exercise that are more valuable than drill, and we do not believe that its military value would be an adequate compensation for the loss.

THE increase in juvenile crime revealed by the Home Office Circular is disquieting—all the more because adult crime shows a marked diminution since the War began.

**Juvenile
Crime.**

It is stated that a comparison of the figures for three months of the winter 1914-15 with those for the corresponding period of last winter shows a jump in the number of young persons charged at police courts from 2,686 to 3,596—an increase of about 35 per cent. Half of this increase is represented by cases of larceny. The reasons for this swelling tide are no doubt multiple. Darkened streets may have much to do with it. The absence of fathers on military service, the general excitement and longing for adventure engendered by the War, and the independence enjoyed by boys who have just left school and are earning high wages may be all factors. An article in the *Schoolmaster*, evidently written from personal knowledge, shows that the "Black Hand Gang of St. Luke's" was a genuine thing, and did real mischief. The cinemas may be partly to blame, and the Music Halls Committee of the London County Council is demanding that "no films be displayed which are likely to be subversive of public morality." It might be enough perhaps to restrict displays of crime to the evening, and forbid the admission of children at such times. But the real moral to be drawn from the statistics we have quoted is that we must keep a tighter hand over our youth after they leave school, and at the same time give them more education, more means of wholesome recreation, and more opportunities for "letting off steam."

THE trustees of the Cecil Rhodes Trust intend to apply to Parliament for powers to divert the moneys bequeathed to provide scholarships for Germans at Oxford to the establishment of imperial scholarships. So ends a great and noble dream. Rhodes hoped that the ties between

England and Germany and America which his scholarships would create would bring about a state of good feeling between the three countries which would tend to make war impossible. It was a generous hope: it has been cruelly falsified. It has been sometimes said that it was chiefly in academic circles that before the War the belief in the possibility of better relations with Germany was entertained; but Cecil Rhodes belonged to no academic circle. He was essentially a man of action, and as a South African he knew something about German ambitions in one quarter of the globe at least. To all who have shared the hope that education and intercourse in early years might do something to bring Britons and Germans together, to all who still have faith that in some future which they will live to see the broken threads will again be joined, Cecil Rhodes's dream will still remain an inspiration.

THE London secondary schools are evidently going to have to fight the same battle with the County Council as the technical institutions fought, and won, some years ago. Bitter complaints about

**Secondary Schools
and the L.C.C.**

the interference of the Council in the internal affairs of the schools are appearing in the press. The Governors are treated as a subordinate body whose business it is to carry out the behests of the Council without asking questions. In one case, for instance, the Council forbade a governing body to make the pension of an assistant master more than £43 per annum; in another it demanded that the head mistress's secretary should be dismissed. All aided schools have been ordered to reduce their staff to the same standard—one teacher to twenty scholars. Variety is a thing abhorrent to Local Authorities; they think that there must be something wrong with a set of schools no two of which are exactly alike. The case is eminently one for the exercise of the peculiarly English faculty of illogicality. The Council, of course, plead that it is its duty to see that the aided schools are conducted economically, and this would no doubt logically justify it in dictating the kind of ink to be used or the frequency with which the windows should be cleaned: practically the Council ought to understand that what is the best for the schools is that the grant-giving Authority should exercise no more than a general supervision, merely satisfying itself that the administration in each case is conducted on sound and businesslike lines. The L.C.C. is over-reaching itself, "giving too little and asking too much," and in consequence the larger and stronger secondary schools are withdrawing from its control, and practising their own economies unaided by municipal grants.

AFTER the Zeppelin raids in the autumn of last year, Dr. Kimmins got 945 London elementary-school children to describe their experiences, and the results have been summed up in a paper in the

**Dr. Kimmins's
Child Study.**

Journal of Experimental Pedagogy. The differences in mental attitude and temperament shown by children of different, but only slightly different, ages are certainly remarkable. We suppose we may assume that, as children do not all develop at the same rate, there were a good many exceptions to the rules, but not so many as to affect the general truth of the statements. Of fear there is evidence only amongst children of ten years old. The younger ones were no doubt unconscious of the danger, but it is curious that not even the girls of eleven speak

of fear. It is possible, no doubt, that a good many of the older children felt fear, but were ashamed to mention it—a point Dr. Kimmins does not discuss. As we should expect, the girls are throughout more subjective and reflective, the boys more objective. Boys of eleven are prone to record conversations, boys of twelve wanted to collect souvenirs, boys of thirteen care little about their homes. Girls of eleven are bellicose, those of twelve critical and argumentative. A curious point is that the father is seldom mentioned, the mother frequently. The capacity for graphic relation is at its best from ten to twelve; in later years, as children become more self-conscious, it diminishes. The inquiry was a genuine piece of child study, but in such work the fact that even young children do not always express all they feel must not be overlooked. Often, too, they echo only what they have heard. The expressions of pious resignation quoted by Dr. Kimmins are obviously second-hand.

HAMPSTEAD, famous in the last generation as the resort of artists and men of letters, of L. A. Brown and Keats, and Lamb and Ainger, has been known to this as the resort of retired divines and schoolmasters, of whom the eldest died in his ninetieth year only the other day, and another was killed by a motor at the beginning of last month. The Rev. J. Llewelyn Davies, known to all classical scholars as the translator of Davies and Vaughan's *Republic of Plato*, was among the most eminent of Broad Churchmen. With Maurice, Hughes, Kingsley, and Ruskin, he founded the Working Men's College, and R. H. Quick, who served under him as unpaid curate at Whitechapel, says of him in his diary: "He seems to know most things and everybody." That such a man should have been relegated to an obscure Yorkshire living, and not raised to the Episcopal Bench, speaks little for the discernment of our Prime Ministers. Mr. Howard Candler had been for forty years a master at Uppingham. The first mathematical master of Thring's new foundation, he was a man of wide literary interests, and took an active part in the work of Toynbee Hall. In Hampstead politics he no less made his mark, and was for years a member of the Borough Council. His friend and ally, Dr. Abbott, is still with us to maintain the tradition.

LOCAL AUTHORITIES.

Women and Agriculture. THE Board of Agriculture and Fisheries has displayed since the War a commendable activity in attempting to advance and protect agricultural interests. And if the circulars which it has issued have appeared to be too numerous and unduly prolix, they have at least indicated a zeal for the national cause and a desire to get somebody to do something. A recent circular has been addressed to Local Education Authorities, urging them to make provision for the special training of the large number of women who have volunteered for labour on the land. As it is probably casual labour of a relatively simple character which is, or will be, chiefly needed, an intelligent woman ought to be able to learn very quickly by practical experience. And if the farmers are really in need of assistance, and are prepared to employ women, they ought to be willing to afford such facilities as may be necessary for the practical experience to be acquired. However, if class instruction in the minor operations of the farm are required, Local Authorities will no doubt be willing to aid in its organization, especially as Lord Selborne has obtained the consent of the Treasury to the payment of special grants to defray the whole of the cost incurred.

The Art of Milking. ONE of the suggestions, however, made by the Board of Agriculture for the consideration of Education Committees in preparing their schemes is not likely to be favoured by dairy farmers. It is proposed that a class should usually contain not less than ten members, and that, *inter alia*, "courses in milking should consist of twenty-four lessons each extending over two weeks." The Education Committee would naturally wonder how it could arrange for classes of young women volunteers to be so trained in the science and art of milking. The Board supplies this direction: "Farmers should be asked to allow the use of cows for the teaching of milking without charge." It can only be supposed that the farmers on the Board of Agriculture, and their dairy expert advisers, are more sanguine as to the complacency and patriotism of the sensitive cow, and better advised as to the willingness of the cow-keeper to confront the possibility of disaster in the country's cause, than those less advantageously placed. In its desire to increase the supply of milkers, the Board of Agriculture must be careful not to decrease the supply of milk.

The Women Wait. IT will be interesting to observe the extent to which the various efforts now being made to secure for women employment on the land are successful. They are to be found doing the work of men in banks and commercial houses, in factories and workshops, at railway stations and on tramcars, but so far the farmers appear to hesitate to avail themselves of the services of women. Throughout the country many women have been enrolled for agricultural War service, and the only difficulty is that they cannot find employment. The chief reasons are, perhaps, that until quite recently recruiting has not been very brisk in many of the rural districts, and various departments of farm work have been regarded as "reserved" occupations; consequently if there has been a deficiency of labour the deficiency has not been acutely felt. There is also the idea among farmers that if they employ women they will have less substantial grounds when appealing for the retention of their men; and finally, it is to be expected that farmers will be the last class in the community to adopt new ways and means of meeting new difficulties. They cannot change the habits and customs of generations unless compelled to do so.

Women Workers. IN some parts of the country, of course, there is no prejudice against women workers on the farms. According to the last census returns in Cumberland, Durham, and Westmorland, 17 per cent., and in Northumberland 21 per cent., of the "persons engaged in agriculture" were women. In the counties of Berks, Bucks, Dorset, Essex, Hampshire, and Oxfordshire, on the other hand, the women employed represent only about 3 per cent. of the total. It is of interest to note that while in Cumberland and Westmorland practically all the women workers are members of the farmer's family, in Northumberland less than 50 per cent. are so described, and in the south-eastern counties of Scotland only from 3 per cent. to 7 per cent. In the southern counties of England the few women who are employed are, as in the case of Cumberland, largely members of the farmer's family. The number of women employed, and more particularly whether the women are members of the farmer's family, indicates in a general way the character of the agriculture pursued in the different districts. It suggests also, perhaps, that schemes for the training and employment of women which may be quite appropriate for one part of the country will be out of place in another.

Canon Rawnsley has contributed a spirited appeal to women to come forward, as "the lads of the Border are all under order," which includes these lines:

"Northumberland lasses, come lend us your hands,
Clever hands that can groom, that can sow, that can reap:
Never mind your fair faces, away with fine laces,
Good homespun and clogs and sun-bonnets are cheap."

And there is no doubt that women, given the opportunity, are prepared to do what they can to take the place of the men. A northern farmer has related how when the War broke out his son and another man on his farm wanted to enlist. As he was reluctant to let them go, not seeing how he could do without them, his daughters volunteered to do their work. During the hay season last year, he says, they forked and made every pike of hay. They drove in turn every class of machine. During the furious storm last March they dressed up in some of their brothers' riding breeches, leggings, and strong boots, rode out in the blizzards of snow and helped to hay each morning about nine hundred sheep. . . . Last week they yoked up the chain harrows and harrowed ten acres of manure. He concludes by saying that their services have enabled him to get through

a difficult season, when otherwise he would have suffered considerable loss.

THE proposals of the Board of Education for the examination of secondary schools have, as the Board notes with satisfaction in Circular 933, already resulted in a revision of the regulations of the Oxford University Delegacy for Local Examinations, while the Cambridge University Syndicate has also intimated that a revision will be made on similar lines. If this means the limitation of external examinations to two examinations at the age of about sixteen and eighteen respectively, considerable inconvenience will be caused in many schools, more particularly in secondary schools of a new type maintained by Local Education Authorities. It is very doubtful whether an examination designed for boys of the average age of sixteen will, under any circumstances, meet the needs of these schools. Many of the banks and railway companies, and all the industrial undertakings employing apprentices, require boys at the age of sixteen, just under rather than over that limit. And the work of many of the new schools is mainly concerned in providing boys with a sound preparatory training with a view to these employments and industries.

SCIENCE NOTES.

It has been decided to hold a meeting of the British Association next September at Newcastle, and that the organization shall follow in general plan the successful precedent made by last year's meeting at Manchester. Practically the whole time will be devoted to the serious business of the sections, social gatherings being in abeyance. One curious result of this method was experienced last year—the abandonment of the large social functions made it all the easier for the members to meet for quiet talks. In our opinion it is quite one of the most important achievements of the British Association that it gives opportunity for workers in different fields of science, and from different parts of the country, to have informal discussions, to make new friendships and renew old ones.

SECTION L will devote nearly two-thirds of its time to discussing the position of science in education. We understand that secondary and higher education will be given one day, and elementary and higher elementary the remainder of the first day, after the President's address. The third day will probably be given mainly to the psychological problems which the war has brought into prominence. We are told that the invited speakers will include teachers of both sexes with long practical experience of school work. We hope the organizers will consider the advisability of inviting at least one large employer of skilled labour. It would further be wise to consider the teaching of science in girls' schools with special reference to the need of an increased number of medical women. The President of Section L is the Rev. W. Temple, and Prof. J. A. Green is Recorder.

THE organizers of the meeting in support of the "Neglect of Science" memorandum may be congratulated on the representative character and unanimity of the large audience which crowded the lecture theatre of the Linnæan Society on May 4. Lord Rayleigh was an admirable chairman, and the speeches in support of the first resolution were full of telling arguments. Sir E. Schäfer's denial that men of science need a classical education in order to express themselves clearly was itself an oratorical effort of high quality; while the advocacy of science teaching by the Poet Laureate and the Master of University College, Oxford, gained in effect by the official positions of the speakers as well as by the vigour with which both Dr. Bridges and Dr. Macan sustained the argument. Lord Montagu of Beaulieu delivered a strong indictment of the Government for its refusal to accept the advice and warnings of scientific experts. At first sight the connexion between this and the school study of science may not be manifest, but it will be evident if we remember that the Government circle consists mainly of men who have been educated at the great public schools, where science is even to-day treated as "all very well for those who have a special bent that way." Attacks were made on the Civil Service examinations; but in our opinion the quality of the speaking deteriorated in accuracy and tone whenever the subject became narrowed to mere reform of examinations. The real reform of examinations wanted is to take away from University lecturers the power of dictating

school syllabuses. Give science masters a reasonable amount of the boys' time, pay them enough to secure able men with broad views, give them a free hand. Let parents learn how many, varied, and important are the careers open to men who combine scientific knowledge with the power of handling men.

SINCE writing the above we have seen an advertisement for two practical physicists at manufacturing works in London, "starting salaries £500 per annum." (The time for making applications has now lapsed.)

THE gold-leaf electroscope is so simple and sensitive that its use in school courses for qualitative work is familiar enough. If the instrument has a plate, a metal pot (such as those used for calorimeters) can be placed thereon, and quantitative work on induction becomes fairly easy. It is, of course, necessary to bear in mind that the experimenter is himself a large conductor. The quantitative uses are extended when the capacity of the electroscope is known. Dr. T. Barratt recently brought before the Physical Society a simple method of measuring this capacity, depending on the use of another condenser of known or measurable capacity, e.g. a parallel plate air condenser. The electroscope is charged from the known condenser as many times as necessary, and from the drop of potential of the latter the capacity of the electroscope may be readily deduced. The amount of the deflection of the leaf was found to have little influence on the result.

THE WELSH UNIVERSITY COMMISSION.

By PRINCIPAL D. R. HARRIS.

THE King has appointed a Royal Commission, of which Lord Haldane is Chairman, "to inquire into the organization and work of the University of Wales and its three constituent Colleges and the interrelation of the three or other possible constituents."

Any inquiry of this kind should have regard to the history of the three University Colleges which are primarily concerned. Their origin is humble—and inspiring—enough. It is told in the following words of Mr. Gladstone, spoken in the year 1877:—"The people of Wales are a people deeply enamoured of knowledge, and what they have done has been done with very little assistance. With no assistance at all from any public fund of any kind they have, within the last five or six years, founded a large and important College at Aberystwyth." Five or six years after these words were spoken two other Colleges were founded, one at Bangor and one at Cardiff, "with very little assistance from any public fund," and with the rise of Provincial Universities towards the close of the last century a national University of Wales was established, consisting of the three constituent Colleges Aberystwyth, Bangor, and Cardiff. The main function of the Colleges was, and is, to prepare their students for University degrees in Arts and Science. Everything is subordinated to this end and has to be fitted into the established arrangements for carrying on this work. The control in all three Colleges is in the hands of a Senate consisting of heads of departments, who naturally regard the work of the College from the standpoint of the interests which they represent. Within the limits so imposed very good work has been, and is being, done. The Welsh student is keen, hard-working, and has his fair share of native ability. He passes his examinations with credit, and is encouraged to undertake independent work when he is ripe for it. The output of post-graduate research reflects the greatest credit on University teachers and students alike. The standard, particularly at the Honours stage, is distinctly high. Perhaps the weakness of the teaching is most in evidence at the intermediate and ordinary stages, where the size of the classes in many subjects makes real teaching impossible, and the lectures degenerate into something very like dictation exercises.

The result is that the young student relies upon his notebooks in preparing for his examinations, and real living con-

tact with the literature of the subject is very slight indeed. To remedy this a large increase in the number of assistants to the professor is one of the pressing needs of the Colleges. Fewer lectures and more *Seminaar* are needed, with some attempt to direct and supervise the reading of the individual student. When full allowance has been made for this recognized deficiency in the teaching—a deficiency which is almost entirely due to lack of means—it may be claimed that the three University Colleges of Wales have a record of which they have no need to be ashamed, if judged by any criterion which has regard to (a) their origin, (b) the generally accepted view of the function of the Colleges as places of higher learning and research in science and in arts, and (c) the means at their disposal for undertaking that work.

This last consideration—the financial position of the Colleges—is serious. Their endowments are quite trifling in amount, and the grants from public funds are insufficient for the purpose, as the fees paid by the students do not amount to half the cost of their education. The consequence is that all the Colleges are in debt and in urgent need of increased funds to carry on. At Bangor and Cardiff very heavy responsibilities have recently been incurred by the erection of new buildings, the money for which is now not likely to be subscribed by voluntary contribution, as there were signs even before the outbreak of the War that this source had wellnigh dried up. At Aberystwyth the difficulties of the situation have been aggravated by the institution of departments for maintaining which the resources at the disposal of the authorities were wholly inadequate.

Turning now to the relation of the Colleges to the University, it must be recognized that the federation is not organic. The Colleges are, in the main, all doing the same work; each is complete in itself and in competition with the other two. There is very little movement of students from one College to another, and the only real co-operation is in the arrangements for examining the students. Even when their mutual interests are attacked, they do not readily combine to defend themselves. On the contrary, there is no little mistrust and jealousy in their attitude towards one another. If one College desires an extension of activity in which the others are not interested, it is a case of two to one against the extension. The University Court has the last word, but the active part in the debate is taken by the academic members, and all questions of a contentious nature are referred to the Executive of the Court, on which the Colleges work for proportional representation—and a little more if they can get it. It has, indeed, been recognized from the outset that the federal arrangement on existing lines would probably prove to be a stage in a process of development in one of two directions—(a) the establishment of three separate Universities, or (b) differentiation of function. The history of the last few years has gone far to show that Wales cannot support, and does not need, three Universities all doing the same work.

The hopes that accompanied the building of the fine new Arts Block at Bangor, with its accommodation for from 600 to 700 students, have been sadly disappointed. The students, who never exceeded 350 altogether, have not come in increasing numbers as it was assumed they would, and in consequence the new buildings are largely a white elephant, because they are out of all proportion to the needs of the College, and, as they only provide for the Arts Faculty, the old buildings at the other end of the town have still to be maintained for science work. Nor is there any ground for supposing that Aberystwyth or Cardiff could at present show good cause for separate and independent existence, though what Bristol has done ought to be possible at Cardiff, with the wealth and population of the South Wales coalfields to draw upon. It would, therefore, seem that the federal arrangement is, for some time to come, a necessity, and some differentiation of function is demanded in the interests of economy and efficiency. It is also called for as a means of enlarging the scope of University education in Wales so as to include higher technical and professional training to a far greater extent than has hitherto been found possible.

For the Welshman, with all his "passionate love of instruction" which Mr. Gladstone noted, is keenly alive to the truth that knowledge is for use as well as possession and enjoyment. There is too, discernible in the attitude of the people—for the common people of Wales think about education and its value—a growing unbelief in the adequacy of book-learning and theoretical studies as a preparation for life and career. They have almost come to see that "knowledge which is a product of mere learning is often weak in itself, puffed up though it may be; it brings to the soul no greatness, and no strength, but acts often as a decorative cloak for a weak and puny mind." However that may be, there is a clear and growing demand for a closer and more vital touch between the work of the schools and colleges of Wales and the conditions of life to-day. The feeling is that the existing provision for University study in Arts and Science is ample, and possibly excessive, whereas facilities for various forms of technical and professional training are lacking to such an extent as to prove a national hindrance. The Colleges are fully alive to this, and have, indeed, tried to anticipate the demand in respect to training in agriculture, in which subject there are departments at Aberystwyth and Bangor. Cardiff, too, has endeavoured to some extent to meet the needs of the mining industry of South Wales, and the establishment of the recently endowed Medical School there is a great step forward. It must be confessed, however, that much more is expected in this direction, and it is hoped that the Commission will find in favour of development along these lines. The fear is that if such technical and professional training were entrusted to the three University Colleges, its success would be prejudiced by the strong academic bias to which reference has already been made. From some points of view the wiser course would be to establish schools of professional training, in co-operation with the University Colleges but under the direct control of the University.

Such an organization of higher technical activities, in co-ordination with the existing Colleges, would suggest the appointment of an administrative Head of the University. This was a very contentious point in Wales some ten years ago, when the proposal to appoint a "working head" of the University was definitely before the Court, but it is outside the scope of the present article to deal with the various considerations for and against. It is, however, in place to say that the present arrangements for conducting the business of the University has serious disadvantages. By this arrangement the College Principals act as Vice-Chancellor in turn for periods of two years—i.e. they are in office for two years out of six. The plan has resulted in the withdrawal, to a large extent, of all three Principals from active participation in the teaching and other activities of the College. Those who are old enough to have been students in one or other of the Colleges in the days before the University, when the Principal had his regular teaching engagements and was interested in the social life of the College, appreciate the greatness of the loss.

If this extension of technical and professional training could be in part brought about by some differentiation of function in the Colleges themselves, many advantages would follow. The working expenses of the three-College arrangement, each College being a miniature University, are burdensome and ought to be avoided as far as possible. Moreover, Wales is an area small and homogeneous enough to afford an opportunity for the development of a national scheme of higher education on comprehensive lines, without undue overlapping. Concentration would enable the additional staff required to be provided at less expense than is now involved in the maintenance of a separate department at each of the three Colleges. The objections urged are (a) that students who live in or near one of the collegiate centres would be seriously inconvenienced if they had to proceed to a more distant College to obtain the education they desire; and (b) that the freedom of the Colleges to develop along their own lines would be seriously curtailed. In reply to the first objection, it may be urged that such movement

of students would have considerable educational value. It is one of the drawbacks of our provincial Universities that students come to college by train, tram, or bicycle, attend the classes for which they are entered, but miss a large part of what a college education stands for. From this point of view, differentiation of function and consequent concentration of work at the Colleges would have a good effect on the outlook of the student, for he would be better educated under better conditions, especially if hostels were provided for the men as well as for the women. With regard to the freedom of the Colleges, it need only be said that we have now reached a stage in the evolution of higher education in the Principality at which it becomes necessary to think of the individual College in terms of the larger whole represented by the University.

THE DOCTRINE OF VIOLENCE.*

IT may be that for the teaching profession the most interesting part of M. Sorel's book, now for the first time appearing in an English translation, will be his preliminary remarks on the art of writing. He has never, he says, himself learned that art, and he makes it no secret that he does not regret it. What he does regret is his education. "During twenty years I worked to deliver myself from what I retained of my education. I read books, not so much to learn as to efface from my memory the ideas which had been thrust upon it." For M. Sorel is a Bergsonian, and therefore has no use for "ready-made" thoughts served up for use, which are, in his view, the product of Academicism. So far as he avoids a straining after literary quality—that vice of academically bred minds which inevitably results in an effect of second-hand literature—his repudiation of the art of writing is all to the good. Still, it does not strike one as a satisfactorily constructed book. This is partly due to the fact that it is translated, but partly also to its assuming an acquaintance with the lesser issues of French politics, which results in allusiveness. This is no fault in a French book written for Frenchmen. But it is commonly claimed for M. Sorel's book that it expounds the philosophy of a new movement, and a book which can attain to that importance should at least be free from the imputation of parochialism. In this respect, however, M. Sorel has suffered from his admirers: what he purports to give us is "reflections on violence." He was not, as is popularly supposed, the founder of a new school in politics and the Rousseau of the Syndicalist revolution. Rather he attempts to put into general terms the ideas which are suggested by a new and spontaneous popular movement. The Nemesis, however, of a writer who sets out as the champion of spontaneity against Academicism, to formulate the principles on which popular revolt can successfully proceed, is that he is bound to become more than academic. His work is doomed to unreality. To tell the proletariat that they *must* cultivate class-consciousness, that they *must* proceed on the lines of a class war, is academic in the last degree. Class-consciousness is nothing if not spontaneous. If it is there, it has its natural effects: to try to stereotype it is the most unreal of proceedings. But the generalizer cannot help becoming something of a propagandist. And directly he does so he becomes as academic as any of the middle-class social reformers who, according to M. Sorel, are the enemy.

But even if we feel that M. Sorel as a guide to action is impossible, he is nevertheless most usefully suggestive. Occasionally he throws out the most enlightening generalizations—some of them of particular interest since the present War broke out. Thus he tells us that: "The proletariat must be preserved from the experience of the Germans who conquered the Roman Empire; the latter were ashamed of being barbarians, and put themselves to school with the rhetoricians of the Latin decadence; they had no reason to congratulate themselves for having wished to be civilized." Again, he finds

one of the chief effects of the war of 1870 on the French outlook to have been the abandonment of the myth of the patriotic army (he makes much of the utility of popular myths), with its volunteer armies and improvised generals. The Prussian occupation brought it back to sober prose and thoughts of organization. But perhaps what may most give Englishmen to think is the use that he makes of von Hartmann's saying that we have replaced the barbarity of former times by cunning, particularly in its application to English trade unionism. The fiction of "peaceful picketing," the half-underhand organization of trade unions under the protection of "laws inspired by fear," are to M. Sorel far less healthy than open violence and the general strike, and possibly he is right. The key to his ideas is the reassertion of individuality as an organ of revolution. It is the extreme revolt against what we know in England as Sidney Webbism and the middle-class organization of social reform. For all these palliatives spring, in his view, from middle-class fear. But the exploitation of Bergsonism can go too far; and it is possible, after all, that collective organization can sometimes be the expression of individuality. It certainly was in the case of Bismarck and Napoleon. How the world after the War will be disposed towards the doctrine of violence, who can say? It may be that it will have got rid of some dangerous stuff by a recourse to crude physical force, or it may have become hardened once more to such methods. When we find a gently nurtured boy writing like this: "Some of them trusted to the bayonet, the use of which gives to some men a curious satisfaction and a sense of something definite accomplished," we wonder whether the armies will come back from the War possessed with the devil of bloodthirstiness, or like an Agave slowly awakening to the horror of her deeds.

The strangest paradox of all is that M. Sorel writes in sympathy with Christianity, and is said to be of a mystical temperament. Some Christians, he says, thought it wrong to avoid persecutions, because conflict was of the essence of their religion; and when the need for a struggle for existence was over they set apart a section of their community to act, as it were, the bloody scene in the seclusion of monasteries. But it is surely one thing to welcome the violence of others and another to enter a conflict in which you yourself are the violent. In any case it makes one marvel at the ways of human reason when one reflects that two Christian anarchists, one French and one Russian, have arrived at exactly opposite conclusions as to the duty of Christians and Anarchists.

DEVONSHIRE.

THE modern haste and passion for quick motion at any price does not leave modern tourists much leisure to observe the characteristics of the people through whose towns or villages they may pass. Yet, even in England, in spite of the levelling effects of national education, quite enough of local characteristics still survive to add interest to the tourist who can spare time to make the acquaintance of the natives of the different districts which he may visit. The process of modern civilization has to a large extent abolished dialects, and therewith one of the most interesting and picturesque historical records of each county, though it is satisfactory to find that, in the more retired counties of England, the native dialect still holds its own—more especially in the West of England, where the "vulgar tongue" represents the old West Saxon, and also bears testimony to the early existence there of the Celtic race by the presence in the dialect of many genuinely Celtic words. The same spirit of modern civilization has abolished different local costumes, such as the peaked hat universally worn by Welsh women fifty years ago, and such as distinguished the inhabitants of the different cantons of Switzerland from each other. It is to be feared that this same levelling process may eventually efface that pleasantest of all characteristics, the sense of humour belonging to different counties. The light and good-natured humour of the peasantry of the West of England is not, however, already lost, as any traveller can ascertain for

* *Reflections on Violence*, by Georges Sorel. Translated by T. E. Hulme. 7s. 6d. net. Allen & Unwin.

himself if he will condescend to engage in conversation with West Countrymen. He will find, too, in the Western counties a pride in their past and a sense of their importance in the kingdom, and, indeed, in the Empire, which is very refreshing in this epoch, when we are constantly being warned that patriotism is a virtue of the past.

The remark made by the Rev. John Prince, sometime Rector of Berry Pomeroy, in his book eulogizing the memories of the worthies of his beloved county, holds good even to-day of the spirit of the West Country: "Insomuch, without envy be it spoken, what has been avouched of England in general may be applicable to this county in particular—viz. that she can live better of herself without being beholden to the rest of the kingdom than that can subsist without being obliged to her." He continues: "I would not be thought to speak so bold a truth of my county out of vanity or ostentation, but let it be to the glory and praise of the good God who has so signally blessed us."

We have perforce to accept the assurance that his unmeasured gratitude to Heaven for the superiority in which he shares is not referable to pride. From an ordinary person we might justly regard his fervent words as springing from that motive. There is no question but that pride of race is a marked characteristic of the Devonians, and it manifests itself in different ways. First and foremost, it will be found that the legends of the past glories of their countymen ancestors have left impressions, dim it may be, but ineffaceable, on their memories. Drake's drum would find lighter sleepers in his own county than in any county "uplong," as the West Country phrase goes. The names of Raleigh, Hawkins, Grenville, Coleridge, and many others, still have some meaning for Devonians. A quaint instance of this was presented to the writer of this article. He was sailing with the tide up the estuary of the Teign in the company of an old shell-back who had visited most of the ports in the world, and he had occasion to ask his boatman whether he or his mates ever ate porpoises.

"No, us don't eat 'em, zur," replied he, "but the Frenchies du, the dirty bastes!"

"Why should you call them 'dirty bastes'?" quoth I.

"I reckon you would call them dirty bastes tu if they had landed and burnt down your town!"

As a matter of fact this invasion took place during the reign of William of Orange, between two and three hundred years ago; but the sentiment and logic of the reply are eminently Devonian. Then there is innate in all genuine Devonians an unusual respect for and admiration of the great county families, whose careers they watch with an interest which carries us back to feudal times, lamenting their irregularities, rejoicing in their triumphs. Some of these great families have, sad to say, set anything but a good example to their posterity, and the writer remembers again another old sea-dog, off the coast of a part of the county where some of these bad specimens had their homes, who remarked: "What have us done in poor old Devon that God should send us such awful rulers?" While another, manifesting equally his firm hold of orthodoxy and his personal predilections, asserted that "if the devil don't get hold of he, he oughtn't to be devil no longer." The late Sir Redvers Buller, as we all know, was criticized for his conduct of the war in South Africa. This criticism was highly resented in his own county, and the enthusiasm for the de-throned general was so intense that it made one believe that he could have led a revolution in the West had he cared to do so. The clannishness of Devonians is notorious; it arises in part from racial pride—in this resembling the clannishness characteristic of Scotsmen—but likewise from a feeling that the ways and feelings of Devonians are not precisely the same as those of other counties who may fancy themselves more enlightened than Devonians, of whom an up-country cynic observed: "The more I go West, the more persuaded am I that the Wise Men came from the East."

Now the Devonians are not stupid, any more than the Irish are stupid; but it is true that they, like the Irish and like the ladies, are hampered by no pedantic admiration for formal

logic. A wit said of the Irish bull that it was always pregnant, and sometimes the answers given by a Devonian peasant may be described in the same way. An acquaintance of the writer's who was out partridge shooting climbed to the top of a hedge and shouted to a man working in the next field: "Did you see a covey of birds fly over here?" The answer came from another man working near him: "'Ee won't a zeed 'em, because he's deaf."

A coach once happened to be overturned on Dartmoor, and all the passengers were thrown into a ditch. The driver and guard set about extricating the passengers, and the latter, observing a pair of small feet projecting from the confused heap of struggling humanity, called out: "Whose be they feet?" On which an answer in a schoolboy's treble came: "If 'tis a pair of low shoes with tabs on them, they be mine!"

Sometimes the answers given are not without a vein of "artfulness," a quality which Devonians are apt to attribute to each other, not without reason. A diverting instance of this is a story current in the present writer's youthful days of a warranty trial at the Assizes in Exeter. The purchaser of a horse brought an action against the vendor for giving a false warrant of the animal's soundness. A groom in the employ of the vendor was cross-examined as to the bargain struck verbally between him and the purchaser. The counsel for the purchaser, in his cross-examination of this witness, asked: "What did the vendor say about the horse? Give me his words." Answer: "He never said nothing about no 'orse at all, zur."

"Were you not present at the interview at which the bargain was concluded?"

"I was, zur, but master spoke about selling a mare."

"What did he say?"

"He said her was a gude mare, and he'd warrant her sound."

"Yes, but I want his exact words. Did he speak in the third person?"

"Bless 'ee, no, zur; there wasn't no third person there except myself, and I never spoke."

"But I want to know. Did he not speak in the first person?"

"No, zur; 'twas the buyer who was the first person that spoke."

Here the Judge intervened and said: "Listen, witness. Did he not say, 'I know the mare and I will warrant her sound?'"

"He never said one single word about your Lordship. However, as you know what passed by hearing of it, you can easily adjudicate the case."

Stories of this kind are as common as apples in Devon, and the peasantry, who have a sense of humour, delight in telling such anecdotes of each other. It must be added that the humour of all West Country stories is much enhanced when they are told in the musical and racy West Country dialect, now passing away before that product of the training college, the modern schoolmaster, who has decided that what differs from his idea of standard English is vulgar and to be eradicated. As a matter of fact, West Country English represents more completely than any other dialect the Saxon as spoken in the South of England, and what makes it more interesting still is the retention or the adoption of a fair number of Celtic words, which presumably are a remnant of the tongue whose last representative is said to have been the aged crone called Dolly Pentatech, who lived at Mousehole, and lived to the age of ninety-two. She died in 1778, and with her perished the language of one branch of the Celtic people. A glossary of the Devonshire dialect was published in 1837, appended to a dialogue in that dialect written by a sister of Sir Joshua Reynolds, Mrs. Palmer. The dialogue represents the Devon tongue exactly as it was spoken when Reynolds was a Plympton schoolboy; its linguistic value is considerable. Many of the words have died out since, and doubtless many of the quaint traits of the Western men have perished together with the quaint old words in which the quaint old traits found expression.

H. A. STRONG.

THE TEACHING OF SWIMMING.

THE sympathetic reception given to the joint deputation of members of the Executive of the National Union of Teachers and the Amateur Swimming Association by the President of the Board of Education, when certain specific proposals for the encouragement of swimming among school children were recently discussed, naturally invites the attention of all teachers to the exceptional advantages which now accompany the inclusion of swimming among the subjects of the school curriculum. It may now be safely assumed that, in all schools where facilities for bathing exist (1) the time taken up by swimming may be considered as part of the time devoted to the teaching of physical exercises; (2) the land exercises for teaching swimming and life-saving may be included in the number of free exercises contained in the drill course. In addition, there are sound grounds for the belief that the next Code will strongly urge upon Education Authorities the desirability of encouraging the teaching of swimming to children in all districts where bathing facilities exist, and that life-saving lessons should be given at the same time.

Quite apart from its claims as a perfect form of physical exercise, swimming has a national appeal in a country like ours, and, of all the terrible lessons of the present War, the simple fact that so many of our gallant sailors have lost their lives through inability to keep afloat in water until the arrival of help is one which teachers will, perhaps, feel most keenly. In season and out of season they have urged the greater provision of bathing facilities in all parts of the country; in many cases schools' swimming associations have taken the work of tuition in hand themselves, and it is largely owing to their energetic efforts that nearly four thousand lives have been saved from the sea during the War.

In view of the enormous financial calls of the War it is certain that teachers cannot look—for the present, at all events—for any substantial grants in aid for the teaching of swimming, and in consequence the burden of tuition will fall upon them. At the outset it is important to bear in mind the fact that it is not essential for the teacher of swimming to be able to swim, or even that he should enter the water. Schools which have attained almost a tradition for the excellence of their swimming have had their pupils taught by teachers who never accompanied their scholars in the water. In some of the large towns—Manchester, for example—the first practical lessons are conducted to a great extent by mechanical means, the youngsters being assisted through the water by means of slight supports attached to the upper arms near the shoulders. The apparatus is moved slowly across the bath by the tutor at first, and, as proficiency in swimming is attained, the assistance given by the teacher is gradually lessened in degree. It is interesting to learn that some enthusiasts maintain that, given a thorough preparation in the essential swimming movements, it is possible for pupils to swim at the first visit to the baths, and there are authenticated cases where this has actually been done.

In districts where there is great difficulty in reaching swimming baths much could be done by familiarizing the pupils with the simple movements of breast swimming. A few minutes of careful practice every week would prove beneficial in every respect, since, when the pupils enter the water and overcome the initial nervousness, they naturally begin to practise the strokes with which they are familiar. Both the arm and leg movements are quickly learned, and one of the best methods of teaching them is to show the movements of a frog swimming in clear water. As opposed to the theory that land drill should always precede practice in the water may be mentioned the view of many swimmers that the first essential to success is familiarity with the water, it being maintained that a pupil who can plunge into the water fearlessly has already overcome the main difficulty in learning to swim. Teachers may have noticed, for

example, that the boy or girl who has learned to dive, very quickly follows up this success by actual swimming. It is important to recognize, however, that when children have a great deal of practice in the water they often contract very serious faults in their style of swimming unless they are under regular supervision. Boys especially are so keen to learn that they develop the most astounding styles, "dog-swimming" being one of the commonest defects. Such faults are often injurious to the health of the swimmer, as they are frequently the causes of serious over-exertion. The effort of swimming one length in a defective style is often greater than that expended in travelling four times the distance in one of the orthodox styles.

The opinion generally held by teachers of swimming is that a combination of land drill and water drill constitutes the most successful mode of approaching the problem. In some schools there is a preparatory course of arm and leg movements, practised on the drill ground and repeated at the side of the bath before the pupils enter the water. A third repetition is then taken when they are all in the water. Under ordinary school conditions, where only one visit weekly is paid to the baths, the adoption of this method usually restricts the swimming activities of a school to small dimensions. In such cases the land drills can be systematically taken throughout the school, so that the pupils will be ready, in due course, to take full advantage of their visits to the baths; for it is not always possible, even when there are professional instructors, to guarantee that scholars who go only occasionally to the baths in their last two or three years at school will be able to swim when they reach the leaving age unless there is such supplementary training given.

The chief difficulty in securing adequate tuition is usually found in the smaller towns and scattered areas where there are baths and facilities for the visits of school children, but no provision for special tuition. In such places members of school staffs are thrown more or less upon their own resources. Sometimes the baths' superintendents will take an interest in the youngsters, and very often they are able to give sound advice to visiting teachers as to the best methods of coaching. Under such conditions it will be found a good working policy to attach a learner to the care of a swimming pupil for a portion of the time available. When the teacher in charge is a swimmer, the practice of strokes already learned can best be done while the pupil is assisted across the bath, the teacher supporting the boy upon the open hand slightly below the learner's breast. Sometimes, and especially in the early stages, the teacher will find it necessary to steady the boy by holding the other hand lightly upon the pupil's back. If the scholars are placed in order on the two sides of the bath, from thirty to forty can be taken across during each visit. When a second teacher accompanies the party he can do very useful work by encouraging the pupils, from the side, to practise plunging. The hands should be held correctly in position, the youngster being encouraged to make the body spring in the direction of his hands, and, in order to give him the necessary confidence, the teacher in the water should wait for the plunger in order to assist him if necessary. This is a very good exercise for learners, as it helps to give them the sense of familiarity with the water already referred to.

In order that as large a percentage as possible should be able to swim on leaving school, it is absolutely necessary to introduce the boys to the water at an early age, and for this reason the younger pupils should be encouraged to visit the baths regularly. At first they should be allowed perfect freedom at the shallow end, and on no account should they be compelled to take the water. Experience shows that the youngest pupils will overcome their fear of entering the bath after four or five visits, though there are occasional exceptions. The boys quickly begin to emulate each other, and any average child will overcome any dread of the water by the end of his first season. After this the acquisition of swimming ability is a matter of time only; some begin to swim much sooner than others, but any pupil who attends

the baths regularly during three seasons should find himself able to swim one or more lengths.

There are, of course, cases which are very difficult to deal with—as, for example, pupils who cannot learn the breast strokes owing to uneven body-balance or difficulty in breathing. Inflated wings are sometimes used successfully with such children, but a far better plan is to approach a solution by means of back swimming. This style of swimming is much easier than breast swimming, and there is no difficulty in breathing. In addition, back swimming is the chief qualification for life saving, and, in the view of many experts, future progress in the art will be largely dependent upon the fuller development of back-swimming strokes.

H. LEATHER.

JOTTINGS.

BRITISH TRADE AND SOUTH AMERICA.—The fine field South America offers for the extension of British trade has been pointed out by capable and experienced judges. Our friend the enemy has already made good use of an avenue which is probably now barred against him, but there are our American cousins, and, to adopt their own phraseology, they are up against the British proposition in South America. To capture a fair share of this trade our commercial representatives must, so far as the Spanish and Portuguese languages are concerned, be almost native and to the manner "born," and Sir Albert K. Rollit, as President and on behalf of the Anglo-Portuguese Chamber of Commerce in London, has promised a contribution of £5 towards the cost of setting and examining the papers in the Portuguese language which are to be prepared for the Commercial Education Examinations of the London Chamber of Commerce in 1916.

THE Executive Committee of the City and Guilds of London Institute have appointed Prof. Gilbert T. Morgan, D.Sc., F.R.S., of the Royal College of Science, Dublin, to the Chair of Chemistry at the Institute's Technical College, Finsbury, rendered vacant by the death of Prof. Meldola. Prof. Morgan was a former student at the College under Prof. Meldola, and later for some years chemist in the works of Messrs. Read, Holliday, & Sons. He is a recognized authority on synthetic chemistry and dye-stuffs, on which subjects he has published many original papers.

THE Board of Agriculture has issued a Special Leaflet (No. 59) on the successful employment of women on the land. Free copies will be sent on application to the Secretary, Board of Agriculture and Fisheries, Whitehall Place, London, S.W.

MISS ALICE GRUNER has resigned the Secretaryship of the Association of University Women Teachers, and the Executive Committee has appointed Mrs. B. Brough, who will take up the work from to-day (June 1). Miss Gruner has held the post for twenty years.

ROLL OF HONOUR.—Two Harrow masters were killed in action in France last month—Captain C. A. Werner, Rifle Brigade, and Captain R. O. Lagden, King's Royal Rifle Corps. The former was at Harrow for thirteen years. There have also fallen Captain H. C. B. Cummins, Seaforth Highlanders, Assistant Master at Edinburgh Academy; Captain V. E. Reynolds, West Yorkshire Regiment, Art Master at Aske's Haberdashers' School, Cricklewood; Second Lieutenant Bernard Pitt, Border Regiment, Assistant Master at Cooper's School, Bow; and Lieutenant L. Lailavoix, of the French Army, Lecturer in French at Victoria University, Manchester; Major William Esson, of the Royal Marines, son of the Savilian Professor of Geometry, Oxford, was lost in the sinking of H.M.S. Russell; Lieutenant T. P. Wood, 3rd Gurkha Rifles, Principal of La Martinière College, Lucknow, India. Lieutenant D. M. Williams, South Staffordshire Regiment, Assistant Master at Winchester House, Eastbourne, reported missing after the battle of Loos, is now known to have been killed. This is the officer in honour of whose bravery the Germans put up a cross with a wreath on it.

Shakespeare's England, to be published shortly by the Clarendon Press (2 vols., illustrated, with an ode by the Poet Laureate, 25s. net), promises to be a worthy memorial of the Tercentenary. Each

(Continued on page 320.)

MR. HEINEMANN'S LIST

THE PEOPLE OF ENGLAND A SOCIAL HISTORY FOR SCHOOLS.

BY STANLEY LEATHES, C.B., M.A.,

First Civil Service Commissioner, formerly Lecturer on History at Trinity College, Cambridge, and one of the Editors of *The Cambridge Modern History*.

Vol. I. The People In the Making.

(From the Earliest Times to the Invention of Printing.)

TIMES.—"... We hope that Mr. Leathes's work, besides delighting the child with its unflinching fertility of interest, may stimulate the teacher to make such methods his own. The language of the book is perhaps the first point which calls for commendation... the wording is uniformly felicitous, lucid, and companionable—a model for the teacher who would study subject-presentation."

Vol. II. The People In Adventure.

(To the French Revolution.)

Each Volume 320 pp., with over 100 Illustrations. Price 2s. 6d.

As in the first volume, so here, Mr. Leathes seems almost to have established a model for a certain class of history—that which vivifies the record of fact obtained from the ordinary textbook—by giving in simple, lucid language what are really the vital things to know: the inner causes of events, the tendencies which link past history with present: the customs, thoughts, temper, and culture of the people in their several classes, all as moving phenomena in the evolution of society from primitive times of to-day.

THE BRITISH ISLES.

By A. B. ARCHER, M.A., Principal Geography and History Teacher, Holt Secondary School, Liverpool. Crown 8vo. With many illustrations, diagrams, and maps. 2s. 6d.

This is the first book in a new series forming a Secondary School Course in Geography, and is suitable for the Lower Middle Forms. It gives a simple account of the Geography of the British Isles, first from the point of view of their Physical Characteristics and Human Geography as a whole, and then in their broad regional aspects.

AVENTURES ET MERVEILLES

A Simple French Reader for Junior Forms. By

C. V. CALVERT, B.A., Modern Language Master at The Aske's School, Hampstead. Crown 8vo. 300 pp. Illustrated. 2s. 6d.

This book is intended as a Reader for pupils of nine to twelve years who have had about a year's tuition in French. It contains sixteen stories based on little known folklore, with Questionnaire, Grammar, and Free Composition Exercises, Passages for Translation, and a Vocabulary.

FRENCH TRANSLATION AND COMPOSITION.

By H. J. CHAYTOR, M.A., Head Master at Plymouth College, and E. RENAULT, B.A., Lecturer in the University of Liverpool. Crown 8vo. 2s.

This book presents an original and effective method of teaching French translation and composition. A number of subjects have been chosen, and each subject is represented by two or more passages from classic French writers, followed by an extract from a standard English writer on the same theme. The French pieces are studied before translation of the English is attempted, and finally, free composition is set upon the same themes.

KEY to the above by E. Renault, B.A., 5s. net (supplied to *bona fide* private students and teachers only).

A COMMONSENSE ALGEBRA.

By ASA BURNISTON, L.C.P. (Hons.). 1s. 6d. With Answers, 2s.

An extremely useful and enlightened Introductory Algebra, the key-note of which is simplicity of treatment. In accordance with the most modern methods of teaching the subject, Algebra is presented as the natural and indispensable companion in Arithmetic, of which it presupposes a knowledge of the most elementary rules alone.

ELEMENTARY BUSINESS TRAINING.

By V. H. ALLEMANDY. Crown 8vo. Cloth, 1s. 6d.

This book is intended for use in commercial classes. It presents a first course in the principles of business routine and customs, and has a valuable appendix of actual examination questions.

London: WILLIAM HEINEMANN, 21 Bedford Street, W.C.

A Selection from METHUEN'S LIST

Just Published.

A SENIOR EXPERIMENTAL CHEMISTRY.

By **A. E. Dunstan, D.Sc. (Lond.),** and **F. B. Thole, D.Sc.** With Diagrams and Illustrations. Crown 8vo, 5s. [*Textbooks of Science.*]

This volume is intended as a supplement to the authors' well known textbooks, "Elementary Experimental Science" and "Elementary Experimental Chemistry." It contains sufficient matter to provide for the remainder of a boy's school career, and will build up a sound development of modern chemical theory on the experimental foundation of his first two years' work.

STORIES FROM THE OLD TESTAMENT.

By **E. M. Wilmot-Buxton, F.R.Hist.S.** Third Edition. Crown 8vo, 1s. 6d. [*Beginner's Books.*]

STORIES FROM THE NEW TESTAMENT.

By **E. M. Wilmot-Buxton, F.R.Hist.S.** Crown 8vo, 1s. 6d. [*Beginner's Books.*]

THE LITTLE HOUSEWIFE.

By **A. M. Phillips** and **C. L. Dean.** Crown 8vo, 1s. 6d.

JUNIOR ENGLISH.

By **F. J. Rahtz, M.A., B.Sc.,** Senior Lecturer at Merchant Venturers' Technical College, Bristol. Twelfth Edition. Crown 8vo, 1s. 6d.

HIGHER ENGLISH.

By **F. J. Rahtz, M.A., B.Sc.** Tenth Edition. Crown 8vo, 3s. 6d.

A JUNIOR HISTORY OF GREAT BRITAIN.

By **E. M. Wilmot-Buxton, F.R.Hist.S.** Third Edition. Crown 8vo, 2s.

A HISTORY OF GREAT BRITAIN.

From the Coming of the Angles to the year 1870. By **E. M. Wilmot-Buxton, F.R.Hist.S.** With 20 Maps. Fifth Edition. Crown 8vo, 3s. 6d.

EASY EXERCISES IN ARITHMETIC.

Containing 5,000 Examples. By **W. S. Beard.** Eighth Edition. Fcap. 8vo. With Answers, 1s. 3d.; without Answers, 1s. [*Beginner's Books.*]

A NEW JUNIOR ARITHMETIC.

By **H. Bompas Smith, M.A.** Third Edition. With additional Examples, on the lines of the questions set at the Oxford and Cambridge Local Examinations, by **W. S. Beard.** Crown 8vo. With Answers, 2s. 6d.; without Answers, 2s.

PREPARATIONS AND EXERCISES IN INORGANIC CHEMISTRY.

By **W. Lawson, B.Sc., F.I.C.** With many Diagrams. Crown 8vo, 2s. 6d.

METHUEN & CO., Ltd., 36 Essex St., London, W.C.

CHAMBERS'S

THE FIRST YEAR OF THE GREAT WAR.

Being the Story of the First Phase of the Great World Struggle for Honour, Justice, and Truth. Told for Boys and Girls of the British Empire by

RICHARD WILSON, B.A., D.Litt.

256 pages, 1s. 6d. net. 20 Illustrations and 4 Splendid Maps.

"Well done . . . comprehensive . . . simply written . . . stirring illustrations."

Scotsman.

FIVE-FIGURE MATHEMATICAL TABLES.

By **E. CHAPPELL, B.Sc.,**
Assoc. M. Inst. C.E.

Comprising the following:—

1. Logs of Numbers from 1 to 40,000.
2. Cologs of Numbers from 1 to 40,000.
3. Antilogs of Numbers '0000 to '9999.
4. Logs of the Logs (Lologs) of Numbers from '000100 to 1000 (of special value to engineers).
5. Antilogs of Numbers from '0 to '0000.
6. Trigonometrical Functions and their Logs.

"Presents several new features . . . it promises, for many purposes, to displace books previously published."

Scotsman.

"Nowhere are the pages overcrowded, and clearness and ease of reference characterize the work throughout. The book should have a wide sphere of usefulness."

Glasgow Herald.

CHAMBERS'S NEW COMMERCIAL ARITHMETIC.

By **P. COMRIE, M.A., B.Sc., F.R.S.E.,** and **W. WOODBURN.**

Part I, 1s. With Answers, 1s. 6d. Answers, 6d.

The main feature of this book is its constant use of short methods. Mental working is insisted on from the beginning, and contracted multiplication and division are introduced early. **Part II in active preparation.**

CHAMBERS'S COMMERCIAL GEOGRAPHY.

By **A. J. HERBERTSON, M.A., Ph.D.,** and **JAS. COSSAR, M.A.**

Entirely New Edition. 536 pages, 3s. 6d. Separately:—

- (1) The British Isles, 1s.; (2) The World outside the British Isles, 2s. 6d.

CHAMBERS'S COMMERCIAL CORRESPONDENCE

OFFICE ROUTINE AND MERCANTILE PRACTICE.

Each section has been submitted to an expert in his own particular line.

Revised and Enlarged Edition. 288 pages, 2s. 6d. Separately:—

First Year's Course, 1s.; Second Year's Course, 1s. 6d.

Commercial Copy Books:—Book I, 3d.; Book II, 3d.

Complete
Catalogue

W. & R. CHAMBERS, LTD., 38 Soho Sq., London, W., and Edinburgh.

A BOOK THAT "MAY BE USED WITH ADVANTAGE WITH ANY FRENCH GRAMMAR."

EIGHTH EDITION. With Supplementary Easier Exercises.

Fcap. 8vo, cloth, interleaved. Price One Shilling.

Hints on French Syntax.

By **FRANCIS STORR, B.A. Camb.,** Officier d'Académie, Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission University of London, &c., &c.

"A capital little book, which we have no hesitation in recommending to French students."—*The Pall Mall Gazette.*

"Mr. Storr's Hints are to the purpose. They are intended for schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing or speaking may use them with advantage."—*The Athenæum.*

Extract from Author's Preface.—At the request of several Masters and Mistresses, who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

London: **WILLIAM RICE, Junior, 3 Broadway, Ludgate Hill, E.C.**

of the chapters or sections is treated by a specialist: The Age of Elizabeth, by Sir Walter Raleigh; Education and Scholarship, by Sir John Sandys; Bearbaiting, by Sir Sidney Lee; Rogues and Vagabonds, by Charles Whibley; Ballads, by Prof. C. H. Firth; Shakespeare's English, by Dr. Henry Bradley; and Plants, by Sir W. T. Thiselton-Dyer.

MISS FAITHFULL, who has been granted an off-term by the Governors of the Ladies' College, Cheltenham, is at present, we believe, investigating the employment of school girls in harvesting and other agricultural work.

MISS FINDLAY, who was appointed from a field of over fifty candidates to the Head Mistressship of the Winchester, in succession to Miss Mowbray, has been for some years an assistant mistress in Cheltenham College, where she was educated, proceeding to St. Hilda's College, Oxford, where she took a Second in the History Schools.

THE Montessori Society has secured Miss M. Mathers, who has been attending Dr. Montessori's course at Barcelona, to lecture on June 25. Non-members should apply for tickets, price 1s., to the Hon. Treasurer, Dr. White, 49 Gordon Mansions, W.C. It has also organized a Summer School, to last three weeks, at Wootton, near Boar's Hill, Oxford. For particulars, apply to Dr. White.

SIR HENRY MIERS presided, on May 20, at a Conference called by the North-Western District of the Workers' Educational Association to discuss "Educational Economics." A unanimous resolution was passed to the effect that the Conference affirmed its belief that any reduction in national expenditure on education would be false economy and gravely prejudicial to the welfare of the nation. Before this, in a review of "Economics" effected by Local Education Authorities, it was stated that the Manchester Education Committee had reduced their expenditure on higher education by £11,106 and on elementary education by £13,099, and that the Cheshire Education Committee had, for the period of

the War, reduced the leaving age for boys and girls going to work from fourteen to thirteen years. When we set this by newspaper paragraphs on Society charity matinées and "quiet dances," it makes strange reading.

SUMMER MEETINGS.—The Local Lectures Summer Meeting of the University of Cambridge (August 2 to 14) promises to be of exceptional importance. The new subject chosen for this year is Russia. The inaugural lecture will be given by the Right Hon. Lord Robert Cecil on August 2, and among the lecturers are such distinguished names as Prof. Vinogradoff, Dr. Hagberg Wright, Lord Redesdale, Dr. Holland Rose. The other subjects on which courses will be delivered are the Economics of Land and the Elements of Pain and Conflict in Human Life.

For the Head Mastership of the University College School, Hampstead, there is a large field of candidates. The Council has wisely determined to guarantee a minimum of £1,000 a year salary. If the school attained again its ordinary numbers this would be largely increased.

THERE is this year to be no Harrow v. Eton at Lord's. The annual match will be played at Eton or Harrow, either school visiting the other for a day.

THE Annual Conference of the Association of Head Mistresses will be held at Wycombe Abbey School on Saturday, June 3. The Master of the Temple, Dr. Barnes, will address the Conference at 10 a.m.

THE Glamorgan Summer School will be held, as usual, at the Barry County Schools from July 31 to August 26. Prospectus and application forms will be supplied by the Chief Education Official, County Hall, Cardiff.

WE regret to announce the death of Mr. Philip Molyneux, who has since 1889 edited the *Oxford University Gazette*. We have frequently called attention to the literary ability and discretion of the editor.

FIRST FRENCH COURSE

Edited by F. B. KIRKMAN, B.A.

PETIT COURS PRÉPARATOIRE.

By L. H. ALTHAUS, Organizing Mistress in Modern Languages to the West Riding Education Committee.

A two-term course in Phonetic Transcript leading up to the *Première Année*. May be used independently. Containing Frontispiece in colours and several black and white illustrations in the text.

Price 1s. 4d.

NEW EDITION, with Coloured Plates.

LA PREMIÈRE ANNÉE DE FRANÇAIS

By F. B. KIRKMAN, B.A.

A day passed by an English boy in Paris. Sixty-three illustrations, of which four are in colour. Seventh Edition.

Price 2s.

New Features:—(i) Four Coloured Plates: (i) Un Cocher Parisien; (ii) Le Charmeur d'Oiseaux; (iii) Les Champs Elysées; (iv) La Seine. (2) A prefatory note containing suggestions as to the best ways of using the book so as to obtain the best results.

All Lesson Notes for Teachers separate and gratis.

PREMIÈRE ANNÉE DE FRANÇAIS.

PREMIÈRE PARTIE (Phonetic Edition).

Third Edition, Revised, and with the liaison of words indicated. Transcribed by Prof. D. L. SAVORY, M.A. Illustrated. With Teachers' Lesson Notes (gratis) by L. VON GLEHN.

Price 6d.

BLACKIE & SON'S NEW LIST

Experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

THE GROUNDWORK OF BRITISH HISTORY.

BY

GEORGE TOWNSEND WARNER, M.A.,

Sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c.,

AND

C. H. K. MARTEN, M.A.,

Balliol College, Oxford; Assistant Master at Eton College.

With Maps, Time Charts, and Full Index. 764 pp., super-crown 8vo, 6s. Complete in One Volume.

In Two Parts, 3s. 6d. each. Part I, 55 B.C.-1603; Part II, 1603-1911.

For the convenience of those requiring the book for certain examinations it is also issued—

In Three Sections, 2s. 6d. each:—Section I, 55 B.C.-A.D. 1485; Section II, 1485-1714; Section III, 1714-1911.

TILLAGE, TRADE, AND INVENTION. An Outline of Industrial History.

By GEORGE TOWNSEND WARNER, M.A. Crown 8vo, cloth. 2s.

LANDMARKS IN ENGLISH INDUSTRIAL HISTORY.

By G. TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge, Master of the Modern Side in Harrow School. 5s. net.

THE MAINSTREAM OF EUROPEAN HISTORY.

By the Rev. FREDERICK HARRISON, M.A., Senior History Master, Rutherford College, Newcastle-on-Tyne. Crown 8vo, with maps. Price 1s. 6d.

In this book a simple account is given of the rise of the German Empire, the origin and development of the Eastern Question, and the various factors which culminated in the great world war.

BLACKIE'S SMALLER ENGLISH CLASSICS.

Selections from Standard Authors.

Edited by Competent Scholars, with Biographical Sketch and Explanatory Notes. Each, paper, 2d.; limp cloth, 3d.

READINGS IN ENGLISH HISTORY.

From Original Sources. Edited by R. B. MORGAN, B.Litt., and E. J. BALLEY, B.A. Illustrated. Vol. I, n.c. 54 to A.D. 1154, 2s. Vol. II, 1154 to 1485, 2s. 6d. Vol. III, 1485 to 1688, 2s. 6d. Vol. IV, 1688 to 1837, 2s. 6d.

A BRIEF SURVEY OF BRITISH HISTORY.

By G. TOWNSEND WARNER, M.A., Master of the Modern Side in Harrow School. With Tables, Summaries, Maps, Notes, &c. 1s. 6d. Synopsis, 6d.

EUROPE SINCE NAPOLEON. (1815-1910).

By ELIZABETH LEVETT, Tutor in Modern History, St. Hilda's Hall, Oxford. With 10 Maps (2 in Colour). 3s. 6d.

The histories of the various countries of Europe are treated in turn, prominence being given to the great personalities that have shaped the course of events. Special chapters deal at the beginning with the Congress of Vienna, and at the end with the diverse constitutions of the Continent, and with some tendencies of the nineteenth century.

ON THE WRITING OF ENGLISH.

By GEORGE TOWNSEND WARNER. Price 3s. 6d. net.

From the Author's Introductory Note.—I have tried to set down briefly the first principles of building up an "Essay": the way to gather and sort material; then to reveal the commonest pitfalls which lie in wait for the beginner, and to put him on his guard against glaring mistakes.

BLACKIE'S ENGLISH TEXTS.

6d. and 8d. each. Blue limp cloth covers. Over 100 Volumes. To be used in correlation with the study of English Literature and History.

THE WARWICK SHAKESPEARE.

Edited by Prof. HERFORD, Litt.D. The best and most widely used edition of Shakespeare for School purposes. Price 1s. 6d. each.

New Issued in Parts.

A COURSE OF PHYSICS.

PRACTICAL AND THEORETICAL.

By CHARLES H. DRAPER, B.A., D.Sc., Author of "Heat and the Principles of Thermodynamics," "Light, Heat, and Sound," &c. Complete, 4s. 6d. In Five Parts, price 1s. each.

ELEMENTARY PHYSICAL SCIENCE. HEAT. MECHANICS.
SOUND AND LIGHT. MAGNETISM AND ELECTRICITY.

Also issued in Two Volumes, 2s. 6d. each.

A JUNIOR CHEMISTRY.

By W. WILLINGS, B.Sc., Senior Science Master, Municipal Secondary School, Brighton. Crown 8vo. Price 2s. 6d.

The object of this book is to provide a course dealing mainly with the experimental facts of chemistry.

The course covers the syllabuses of the Oxford and Cambridge Junior Local Examinations, and a large number of questions set at these examinations will be found at the end of every chapter. *Just Published.*

New and Revised Edition.

MAGNETISM AND ELECTRICITY.

Including the Principles of Electrical Measurements.

By S. S. RICHARDSON, B.Sc., A.R.C.Sc., Head of the Physics Department, Central Municipal Technical School, Liverpool. 4s. 6d.

"Mr. Richardson is to be congratulated on the success which has attended his efforts. . . . The book is an admirable one."—*Electrician.*

ALGEBRA, THE SCHOOL. By A. G. CRACKNELL, M.A., B.Sc., F.C.P.
With or without Answers. 5s. Also in Two Parts, each 2s. 6d.

"The book is compiled in accordance with the latest views on the teaching of Algebra, and we have rarely come across a clearer or more satisfactory exposition of subject-matter."—*The Journal of Education*.

ARITHMETIC, THE SCHOOL (SENIOR EDITION). By W. P. WORKMAN, M.A., B.Sc. 3s.

"The best Arithmetic for Schools on the market."—*Mathematical Gazette*.

BOTANY, SENIOR. By F. CAVERS, D.Sc., F.L.S. 4s. 6d.

"There is abundance of experiments, with useful practical hints and directions . . . the volume is evidently the work of an accomplished teacher."—*Educational Times*.

CHEMISTRY, SENIOR. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. 4s. 6d.

"This volume is characterized by clearness in style and arrangement and by accuracy of subject-matter."—*Educational News*.

ENGLISH COMPOSITION, SENIOR. By E. W. EDMUNDS, M.A., B.Sc. 2s. 6d.

"Excellent devised and arranged."—*School World*.

"A useful handbook . . . lucid and thoughtful."—*Cambridge Review*.

ENGLISH LITERATURE, THE TUTORIAL HISTORY OF. By A. J. WYATT, M.A. Third Edition. 2s. 6d.

"The book is undoubtedly the best school history of literature that has yet come under our notice."—*Guardian*.

ENGLISH PROSE, AN ANTHOLOGY OF. For use in Schools and Colleges. By S. E. GOGGIN, M.A., and A. R. WEEKES, M.A. 2s. 6d.

"This anthology of English prose is compiled with abundant good sense. Within its limits the choice of writers could not well be bettered . . . a very useful book."—*Saturday Review*.

ENGLISH VERSE, AN ANTHOLOGY OF. For use in Schools and Colleges. By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. Second Edition Revised and Enlarged. 2s. 6d.

"The collection has been compiled and edited with great judgment and care."—*Educational Times*.

FRENCH COURSE, SENIOR. By Professor ERNEST WEEKLEY, M.A., and C. GILLI, B.A. 3s. 6d.

FRENCH READER, SENIOR. With Notes and Vocabulary. By R. F. JAMES, B.A. 2s. 6d.

"A senior classbook which we have no hesitation in describing as the best of its kind we have seen."—*Secondary Education*.

FRENCH ESSAYS, MATRICULATION (FOR FREE COMPOSITION). By H. J. CHAYTOR, M.A., and Dr. W. G. HARTOG, M.A. 1s. 6d.

"A serviceable and well graded book."—*School World*.

GEOGRAPHY 1916-17, SENIOR. Including Principles of Physical Geography, the British Isles, and Europe. From the *Textbook of Geography* by G. C. FRY, M.Sc. 2s. 6d.

"Mr. Fry brings out the fascination of the broad view of geography."—*Literary World*.

GEOMETRY, THE SCHOOL. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. 3s. 6d.

ALSO IN TWO PARTS:—

PART I. Covering Euclid I, III (1-34), IV (1-9). 2s.

PART II. Covering Euclid II, III (35-37), IV (10-16), and VI. 2s.

"One of the best books on modern lines."—*Oxford Magazine*.

HEAT, SENIOR. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. 3s.

"As in other works of this series, the information is accurate and up-to-date, and the difficulties are faced and explained."—*The Journal of Education*.

HISTORY OF ENGLAND, SCHOOL. By M. E. CARTER, Honour School of Modern History, Oxford. 3s. 6d.

Also in three parts as follows:—I, to 1603; II, 1485 to 1714; and III, 1660 to 1910. 1s. 6d. each.

"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.

LATIN AUTHORS, SELECTIONS FROM (SENIOR EDITION). With Appendix of Passages for Practice in Unseens. By A. F. WATT, M.A., and B. J. HAYES, M.A. 2s. 6d.

"The selection is a good one, and the notes are brief and to the purpose."—*The Journal of Education*.

LATIN COURSE, SENIOR. By A. J. F. COLLINS, M.A., and A. ROBINSON, B.A. 3s. 6d.

"Carefully planned and most capably worked out."—*Educational Times*.

MAGNETISM AND ELECTRICITY, SENIOR. By R. H. JUDE, D.Sc., M.A., and J. SATTERLY, D.Sc., M.A. 5s.

"We can recommend the book as efficient and trustworthy."—*The Journal of Education*.

EDUCATIONAL REFORM.

By Sir CHARLES WALDSTEIN.

A MOST important issue has been raised by the two manifestos published in the *Times* of May 4—the one by Sir E. Ray Lankester's Committee, the other by a number of representative men of learning and culture, including some specialists of the natural sciences. The proposals they contain are vital to our national life, in the present and for the future. A false step, a hasty reform, or a complete revolution of our educational system, might prove fatal to our national life for generations to come. But the opinions expressed by both parties are in no way unreasonable or extreme, and can surely be reconciled. Is it too much to hope that the two bodies will meet and co-operate, and, if possible, found a great Educational Reform League to improve our national education? Would it not be possible for them, thus united, to seek for and to confirm—not the differences in their views—which have already been abundantly formulated, but the points of agreement which they could bring before the administrative authorities with weight of influence ensuring practical realization?

If Sir E. Ray Lankester's Committee were to succeed in securing more complete recognition for the study of modern languages and, especially, for instruction in the principles and achievements of the natural sciences, they will have done a great service to the nation. On the other hand, they must effectually guard against the fatal misconception in the teaching of these subjects—a misconception which is almost inevitable, if not in their own case, at all events among the wider public—that they are to be taught with a view to producing the specialist or technical journeyman. The wider teaching of science must be humanistic in nature, in which even the most technical and utilitarian studies are ultimately

—and even immediately—pursued in what we must call the humanistic spirit. The aims of such teaching are to be the training of thought and taste, the development and refinement of the sense of truth, the increase of knowledge; they are not to be affected by the premature introduction of “applied” and opportunistic ends. We must all admit that no man is properly educated (may I use the word “cultured”?), whatever his classical, historical, literary, or artistic attainments, who has not imbibed the spirit of modern science and has not some acquaintance with its achievements.

It is not enough to know Shakespeare; we must also know Newton if we claim to have grasped the history and meaning of English civilization. On the other hand, from the point of view of national education, it must be admitted that the *Principia* are not to the same degree accessible and intelligible to all people as are the works of Shakespeare, because they only represent one aspect of human life—its thought and its needs—while Shakespeare covers the wholeness of human life; the subject-matter and the language necessarily appeal to all, and his work thus forms part of what have justly been called the *humanistic* studies. In the case of Hellenic or classical literature, this applies to all Western nations. The classics will thus always form the groundwork of general education.

No man recognized this more fully than the late A. W. v. Hoffmann, the great scientific chemist of the past generation of German educationists, who helped to lay the foundation of that purely scientific organization which has been applied to their industries, and even to the conduct of war. In his Rectorial Address at the University of Berlin, delivered many years ago, he maintained with convincing clearness of conviction and exposition that the classical education in the *Gymnasias* of the Germany of old was ultimately productive of higher standards of scientific research and achievement, and immediately of better men to further its ends, than the teaching of what we call “the modern side.” The result of the spirit of his teaching and of that of his scientific colleagues (to adhere to only the one instance of Hoffmann’s work) has been that the aniline industry (though discovered in England by Perkin, under whom Hoffmann worked) has been monopolized by Germany. The three factories which thus control that industry (at Mannheim, Hoechst, and Elberfeld), besides their armies of workmen, have each about 350 highly trained scientific chemists, most of them educated in the purest spirit of their science in Universities, and not in technical schools. One hundred of these may be occupied in direct supervision and management, while two hundred are engaged in more remote chemical research in the same spirit and with the same methods as prevail in higher research in Universities. I am, on the other hand, told that the largest chemical works in the United Kingdom employ at most ten highly trained chemists.

Now what does this mean? Not that 350 highly trained chemists flocked to the doors of the factory to dump their unsolicited intellectual merchandise before ignorant and recalcitrant employers, but that these employers—and the nation at large—were sufficiently well educated to realize the advantage of pure science and research; that they called for such scientific assistance, and gradually developed their extensive research laboratories, which ultimately were turned to such enormous commercial profit. It certainly does not mean that we ought to concentrate our energies on the technical training of chemical or other scientific journeymen, but that, as a nation, we must fight what Meredith called “England’s hatred of thought”—the general mistrust of the expert. We must not listen to the clamour of the popular sciolist, that we ought to level science and education down to the needs of our industrial and commercial life, but we must raise the nation up to the understanding and appreciation of the highest science, even the abstract and humanistic aspect of it. This will lead to thoroughness in its application to the varied needs of the nation and its economic life.

One truth it is, however, most important for us to remember at the present moment:

That the success attained by Germany in its industrial and com-

mercial development during the last forty years, as well as in its preparation for this War, and where it has been legitimately successful in the waging of it, are entirely due to the infusion of the spirit of thoroughness into the whole German nation by such men of the previous generation as v. Hoffmann, by Virchow and Helmholtz, Gauss, Kirchhof, and Bunsen, and innumerable representatives of humanistic studies kindred in spirit with these; that these men were all trained in “classical” schools; and that this humanistic spirit of those former days, affecting the life of the whole nation, was again the inheritance of the thought derived from their philosophic predecessors, such as Kant, Fichte, Schelling, Hegel. Out of this inherited earlier spirit has come the thoroughness and the appreciation of scientific organization in the functions of the government, as well as the appreciation of things of the mind on the part of the whole people. I have endeavoured to show elsewhere how this monstrous War is the result of the rise and dominance of *Strebertum*, the victory of the modern “pusher,” the very antithesis of the traditions of the older Germany. I maintained that, in so far as the older spirit has survived, they are successful, and that all that is bad and leads to their ultimate undoing, as it has already produced the moral degeneration of the German people, is due to the new *Alldcutsches Strebertum*.

It is in the nature of these hasty, intellectual *parvenus* to exaggerate the importance of the application of science to military organization. By a curious paradox they become the pedants who build up theories of national psychology, and imagine that systematic frightfulness will overcome the nerve of highly intelligent, as well as healthy and sturdy, enemies. It is they who place their chief hope on Zeppelins and submarines and on superior railway organization. On the other hand, the War will be won by the Allies the more rapidly as they increase the thorough and scientific organization of the business of war, while retaining the moral qualities which, as nations, they possess. We must free ourselves from the mistrust or the neglect of the expert which leads our Government to assign skilled work to unskilled amateurs, and produces instances such as the one quoted by Lord Montagu—instances which can be multiplied a hundredfold. But we must go deeper and wider than this until we come to the prevalent ideals of education, where, with the exception of the Scottish people (whose appreciation of thought and learning is comparatively high), the general value placed upon intellectual achievement and eminence is of the lowest. So long as the nation at large (from the governing classes, through the employers of labour and the labourers themselves) does not justly appreciate such moral values, there is little hope of improvement. But, above all, when the parents in their homes—however priceless our national sports are to us—prefer their sons to gain distinction in the world of sport or in social eminence rather than as able scholars, and even encourage contempt for intellectual achievements, the best educational systems and the efforts of all our pedagogues will be in vain. And yet, recognizing the crying need for reform in the teaching and efficient diffusion of culture and of science, let us always retain our national ideals of manhood as conveyed by the term “gentleman”—the man possessed of culture, including the understanding and the appreciation of the natural sciences as well as the humanities, the man delighting in our sports and our outdoor life, with the accompanying spirit of fair play, chivalry, and generous manliness. For “the man’s the gowd for a’ that”—and it’s the man who wins wars.

THE head master of an elementary school in a Midland town questioned 175 boys as to how often they visited picture palaces. Three went every night, 40 three times a week, 20 twice, 100 once, and 12 did not go. Of 64 boys absent on the day of the big snow-storm, because of the snow, 14 had gone to the pictures. Thirty boys in the school worked out of school hours to get money for the pictures. He tried to find out what films attracted them. Scott in the Arctic bored them, but they liked detective dramas and the comics. As another head master in the same town remarked, “it is most regrettable that children know the films are nauseating, but excitement holds them.”

ENGLISH IN THE LOWER FORMS OF A GIRLS' MUNICIPAL HIGH SCHOOL.

(Continued from April, page 207.)

By RUTH M. FLETCHER.

ORIGINAL poetry by children is an interesting subject, but space forbids full discussion here. Enough to state that I have experimented independently in this direction, and am amazed and delighted at the result. I believe that most intelligent children of this age have within them, mostly latent, a vein of poetry, simple and rhythmical, and need only the right stimulus to use and delight in this power. The ear is best trained by the poetry they learn orally in class; therefore I aim at giving them simple, rhythmical verse. R. L. Stevenson's *Child's Garden of Verse* and W. Blake's *Songs of Innocence* are the best I know. Beyond this there is no definite training for verse making. Each child chooses her own metre and rime. She is quick instinctively in realizing if the metre is irregular or the rime wrong; but, on the other hand, I find that she is rarely able to alter her own work—the first inspiration is the only inspiration. The teacher's work is suggestion. This suggestion, in my case, has taken three forms. I add examples illustrating them. The verses in each case came to me exactly as quoted.

1. Verses from a suggested title—*A Dirge for Baldr*:

- (1) Baldr is gone from us
Baldr, Baldr
Baldr come back to us
Baldr! Baldr.
Best of all the Gods
Why have you gone from us
And left us all grieving now
Baldr, Baldr?
- (2) Killed by a traitor God
Lok, the Accuser
Killed by the fatal bough
Baldr, Baldr.
Best of all the Gods
Why have you gone from us?
And left us all grieving now
Baldr, Baldr.

2. The first two lines of a real poem, unknown to the children, were given:

- (1) What was he doing, the great God Pan,
Down in the reeds by the river?
Tell what he was doing? Why, who can
Down in the reeds by the river?
- (2) Perhaps he was talking to mermaids fair
Down in the reeds by the river—
Come up from the sea to see him there,
Down in the reeds by the river.
- (3) Or playing his pipes to the creatures round,
Down in the reeds by the river;
For all creatures came to hear the sound,
Down in the reeds by the river.
- (4) We shall never know, for go who dare,
Down in the reeds by the river?
Pan only knows what happens there,
Down in the reeds by the river.

3. The children had learnt *Fairy Bread*, by R. L. S., and the suggestion was that they should write a reply to the invitation:

A Reply to the Witch's Invitation in "Fairy Bread."

Mother witch, I will not come
Up to your retiring room;
Other children eat your bread,
Then, are charmed to sleep
By your stories; and, 'tis said,
Wrapt in slumbers deep,
They forget their friends so dear,
And only long more tales to hear.

Collective work, too, has its value. These thirty children have written a scene in blank verse on the death of Baldr. The subject was chosen as the result of reading Matthew

Arnold's *Baldr Dead*. They built up the story and action of the scene orally, and wrote down in their notebooks the order of events. The outline was now ready; the form had next to be chosen. We spent about fifteen minutes examining Shakespeare's medium in *Julius Caesar*. They saw each line had ten feet and five beats, and that the first beat came on the second foot; also that a line could be divided between two speakers. They were told this was blank verse. For home work they took any part they liked of the arranged scene—e.g. where Lok tempts Hod to join in the sport—and this they put into dramatic form, with blank verse as the medium. I chose the best lines in each part, and wrote them out together as a connected whole. The following speech is typical of the scene. It is spoken by the god Tyr to his assembled brother gods, who are idling in the hall:—

Tyr. The day is hot and all the earth is still—
Too hot, indeed, to jump or run or hunt;
All Asgard streets are silent as the night,
For all the Gods have drawn their shady blinds
To keep the burning heat of day without.
Someone suggest a mild and pleasant game,
Our hands away from idleness to keep;
We're tired of idling here upon the ground,
Now brothers, speak your mind and name a game!

V. *Individual Reading*.—The great work here is to see that the child has plenty of good books among which she can browse. Each child in this form has her own textbooks, but most of these she must read for herself. Why should *Westward Ho!* for example, be read in class? It will be read just as well, and with much greater interest and appreciation, if read individually. We also have a form library, which is changed every term, and this puts about a hundred books within the reach of every child throughout the year.

In conclusion, ask the children what books they have "done" in class, and their answer will disappoint you, but ask them what books they have read for *themselves*, and what they think about them, and I think their answers may be taken as the justification of this article and these ideas.

"TESS" ON THE KINEMA.

By S. P. B. MAIS.

HE was a shrewd critic who laid it down as a law that the test of a masterpiece lay in its adaptability to translation. *Don Quixote* has been rendered into every European language and still remains supreme; the Russian novels in English still retain all their essential greatness; Dante can transport us to his *Paradiso* and *Inferno* even through the medium of Carey's verses just as much as if he had himself written in our own tongue.

But there has since arisen a leveller of all writing, where Marie Corelli can meet Shakespeare on equal terms, and Sir Walter Scott claim no higher place than Agnes and Egerton Castle or the author of *The Murder in the Red Barn*. The Kinema is the Red-hot Socialist of Letters. All delicacy and refinement of style, all shades and subtleties of character-drawing are removed, the bare plot-making and incidents are kept and thrown into the limelight. The effect of such treatment on such a writer as Thomas Hardy passes belief.

I have just undergone the experience of seeing *Tess of the D'Urbervilles* screened in a country town in Hardy's own part of Wessex.

We were shown, to begin with, life in Tess's cottage with the drunken father and mother. Tess herself was appalling. All through the play one could not help feeling that no Angel Clare, no Alec D'Urberville would ever have looked twice at such a woebegone slattern. We were next introduced to the parson (of course comic) who discovered the lineage of the D'Urbervilles, and given a picture of Tess's father and mother full of their new found dignity in being the descendants of so great a family; this was followed by the Maypole scene, in which

a large bevy of beauties (such as could never have been found in any one village in the world) are engaged; among whom Tess stands out as the only ugly one. Three travel-stained pedestrians on a walking-tour apparently think otherwise, for one of them (by far the least interesting: Angel Clare, of course) leaps into the ring and carries her off. An explanation in big type follows to the effect "that had Angel only carried off Tess for good at this point, the whole terrible tragedy would have been averted." This statement caused the audience to sink back into their chairs and chew sweets in comfort; the applause and hisses, indignation and the producing of handkerchiefs was to come after; all was well! They were quite ready for Alec D'Urberville when he appeared in immaculate flannels; he was too well dressed to be anything but the villain. We were allowed to see Tess gradually become more and more harassed by his "odious attentions," followed by her disgrace, her nameless baby lying almost dead in the cottage bedroom. Very graphically and in full detail is the baptism of "Sorrow" portrayed; neither are we spared the harrowing finish of the last act in the child's history when Tess buries it in a forsaken corner of the churchyard in the dead of night.

The audience now began to feel that it was getting quite enough gloom for its money (it obviously didn't know it's Thomas Hardy); luckily, however, Talbothays Farm soon came on the screen. The merry milkmaids, the Froom river flowing placidly along the bottom of the meadows, the cattle grazing, or being driven up into the byre, immediately captivated our villagers. This they really understood, and were ready to appreciate; this was a slice of home life. They hugged themselves with delight; imagined themselves there with Marion and Izz; almost mimicked the conversation that was going on in the kitchen; and were transported with glee at the love-making of Angel and Tess. They were frankly bored with the scenes in Angel's home at the vicarage at Emminster, for the old Parson Clare was not in the least funny, but astonishingly like a real clergyman; they didn't want to see a drawing room; they wanted to see the cows milked—to see the whole routine of life on the farm. Certainly this was the most satisfactory part of the story; for the moment we could forget the impending doom, and just watch the beauties of this lovely rural Wessex scene unravel themselves before our eyes. Gradually, however, we are torn away from the pastoral side, and made to realize the ebb and flow of the passions at play. We see Tess desperately in the toils, asking her mother whether she ought to reveal her past; we see her in her supreme moment of self-abnegation, writing the letter which was to test her whole life; we even see her putting the letter under the door of Angel's room, and watch it (with horror!) as it goes *under* the carpet, and consequently never reaches him. We are thrilled indeed when we see her the next morning waiting for Angel to come down to decide her fate—he, of course, all unwitting.

We almost forget the repulsiveness of both the actors in this dramatic scene; the preparations for the wedding gave the audience a chance to display a good deal of quite unaccountable ribaldry, which was quickly dispelled when they witnessed Tess's recovery of the lost letter on the very day she is married. All the rest of that day she tries to get Angel to read it and in the end she is forced to listen to pictures of his own past; innocently, on hearing his, she tells him hers and the effect is stupendous; his antics sent the audience into roars of laughter; the more frantic he became the more they laughed, and when he walks in his sleep, dreams that Tess is dead, carries her downstairs and places candles at her head and her hands across her body, most of the people in the hall were almost hysterical with joy. Angel's conduct seemed to be outrageous; his thrusting of notes into Tess's hands next morning and abrupt leaving of her, intolerable.

We are now carried to Brazil with Angel and see him on a bed of sickness, unable (as ever) to receive any of the letters which Tess sends to him; she, meanwhile, having again found work at Flintcomb Ash; the villain (to the great joy of the audience) at this dangerous moment reappears and, of course, makes overtures which are treated with contumely

until tragedy upon tragedy, in the shape of her people's death, and consequent poverty and being turned out into the streets, provides Hardy and the kinema man with a setting after their own hearts.

In the ruined abbey, with the moonlight pouring through, we find Tess asleep by the vault of the ancient family of D'Urbervilles, while all her household goods, brothers and sisters are lying about outside . . . to her comes Alec . . . proposes that she shall go and live with him, and, beaten to her last post, she assents.

A most ornate drawing-room in Alec's house is the next scene; enter Alec in evening dress at tea-time, outrageously drunk . . . he tries to kiss the maid, goes out of the room . . . only to permit of the long-lost wanderer from Brazil to enter and learn the horrible truth from Tess. He staggers out of the room aghast. Alec re-enters, is almost beside himself with merriment at the thought that Angel has returned, and retires to bed, whereupon Tess picks up a convenient knife and follows him intent upon murder.

For some reason unknown Angel re-enters, and, on being told the truth, persuades Tess to escape, and some time after, somehow, Angel and Tess find themselves at Stonehenge . . . a wonderfully convenient setting for a kinema film, and future ages, unaware of the anachronism, will probably claim that Hardy placed his final catastrophe there because of the kinema. It made a most realistic finish to see the beaters quietly creep up in the dawn to the slab of stone on which Tess and Angel slept.

A crimson sky, swiftly passing clouds, the black flag over the Winchester prison, and the film is over and the wheel ceases, the lights go up and we file out into the muddy streets.

CONFERENCE AT SWANWICK: TEACHERS' CHRISTIAN UNION.

THE first Conference of what has been known as the Empire Guild of Teachers, now renamed the Teachers' Christian Union, was held at Swanwick, Derbyshire, on April 25, 26, 27, and 28. The Conference was based on the two following aims:—(1) The promotion of a closer fellowship between teachers, in varying types of schools, with each other and with social workers, and of a wider recognition of the identity of the aims underlying the work of both; (2) the clearer understanding and reconciliation of the often contrasted purposes of vocational and liberal, primary and secondary, individual and social, secular and religious education. The line of discussion throughout fell under two heads: (a) religion and vocation, and (b) social reform through education.

On looking back on the Conference, in the light of its two aims, certain characteristics stand out very prominently. The most important, perhaps, was the real spirit of unity of aim which could be felt from the beginning between all the members. About 250 people, representing various types of social work, were there, and their main purpose seemed to be to find mutual agreement of principles and their own varying parts in carrying these out. Social institutions represented were the Churches (both Free and Established), the Universities (including the Workers' Educational Association), settlements, social organizations for distributing labour, training colleges, public schools, secondary schools, and elementary schools. The last type was in the minority, owing partly to the fact that the N.U.T. Conference was being held simultaneously at Buxton, and partly because the elementary-school teachers' Easter holiday is very short. It is interesting to notice that this is, perhaps, the first time the teacher has been thus publicly recognized as essentially and primarily a social worker.

A second characteristic of the spirit of the Conference was the universal desire to ignore all differences in creed between members of the Christian Church, and to emphasize re-

semblances. This desire was very evident in the papers read, and in the discussion which followed, in the case of both Churchmen and Nonconformists. It was especially prominent in the discussion on religious instruction in schools and training colleges, opened by Miss Mercier, of Leeds.

A third important point, which became a conviction arising out of the various discussions, was the need to know very thoroughly the social conditions of the school and its general background, and to begin there and lead up to a more general ideal by the various paths possible in each individual case, instead of the more general plan of treating each school in the same way. Here co-operation between teachers and social workers would be very necessary.

A fourth point grew out of the others: it became more and more evident that education for citizenship is one of the aims of the future, and, from the difference of opinion with regard to methods, it could be seen that much experimental work in this direction has still to be done and many personal prejudices to be swept aside. In this connexion the continuation of the education of greater masses of the nation was constantly insisted upon, either by raising the leaving age of the elementary school to sixteen, or by continuation schools, which should form part of the *day's work*, and not be added to the evening of the weary child worker.

The program of the Conference was as follows:—

April 26.—Education and Religion, by the Very Rev. T. B. Strong, Dean of Christ Church, Oxford; Private and Public Duty, by Miss E. E. C. Jones, Girton College; the Spiritual Ideal of Education, by the Rev. W. Temple, President of the Workers' Educational Association.

April 27.—National and International Citizenship, by the Rev. E. W. Barnes, Master of the Temple; Practical Expressions of Citizenship—Municipal, National, and International, by J. St. George Heath, Warden of Toynbee Hall; Elementary Education—Success or Failure? by Miss Cleghorn; The Student Christian Movement and its Contribution to Education, by the Rev. Tissington Tatlow; Social Reform through Education—the point of view of the Working Classes, by George Shann.

April 28.—Citizenship—Ideals in Schools and Training Colleges, by Miss M. L. V. Hughes; Some Opportunities of Social Service, by Eustace Charlton; Religious Instruction in Elementary Training Colleges, by Miss Mercier, Vice-Principal of the City of Leeds Training College; The Young Women's Christian Association as a Field for Social Service, by Miss Irene Cox. Mr. A. L. Smith, of Balliol College, who was to have spoken, was unfortunately prevented from being present.

Arrangements have been made to hold a second Conference, at the same time and place, next year. A book of the first Conference, containing either complete papers or in some cases the substance of papers read, will be ready shortly, and may be had from the Secretary, Miss W. M. Mowll, 26 George Street, Hanover Square, London, W.

THE IMPORTANCE OF THE STUDY OF INTERNATIONAL RELATIONS.

AN APPEAL TO TEACHERS.

By PERCY ALDEN, M.P.

THE aim of the Council for the Study of International Relations is to promote the impartial study of the social, economic, and ethical problems arising out of the War, and that aim cannot be fulfilled without the co-operation of those who are specially engaged in the work of education. To the teachers of the country may I make a personal appeal for help?

Mr. H. G. Wells has aptly said that the pacifist has been too much concerned with "weak little grumbles against the existence of war"—in fact, with the negative, rather than with the positive, aspect of international relations. The ultimate responsibility for the present War is to be traced not only to Foreign Offices, kings, and statesmen, but also

to the ignorance and indifference of the mass of the peoples of the belligerent nations to anything but home affairs. This apathy of the public towards international questions has been rudely dispelled, and there is a widespread interest in these problems and a demand for stimulus and guidance. The desideratum of the moment is a decisive victory for the Allies, but this in itself, however complete, will not ensure a permanent peace. All it can do is to bring us more quickly to the settlement, and whether the conditions of the future will make for peace or war in Europe will depend on the kind of settlement effected. But the origins of war are far deeper than mere external relations, and the wisest of settlements will not of itself secure a stable and lasting peace; that can only come by a radical change in public opinion. There is still a large section of the nation which fails to realize the nature of the issues involved, the strength of the forces arrayed against us, and the inner meaning of the struggle. Moreover, if when peace is declared we are to put an end to the intolerable condition of an armed Europe, the public must think out clearly the great problems that have been raised by this War, and be fully prepared for the settlement. The present crisis has forced upon the British democracy a sense of great new responsibilities, both in thought and action.

This War has made Britain realize, in a degree hitherto unknown, that she was, after all, a part of Europe, and her well-being depended on her international relations. There was a general feeling of bewilderment at the suddenness with which the tragedy had fallen upon us, a general desire to secure that, if it were possible, such a tragedy should not recur, and anxiety to understand the conditions which determine international relations. As soon, however, as the student begins seriously to investigate these subjects, he finds he has embarked upon a study of immense range and complexity: he is involved in problems of diplomacy, international law, the rights of nationality, economic relations between States. The great difficulty he has to face is the dearth of suitable literature, of books that are free from bias and that deal with international relations as a phase in human life. The tendency is, when faced with these difficulties, either to surrender all effort to understand and solve them or merely to read such literature as emphasizes his own predilections. Hitherto so-called "democratic" opinion on foreign politics has been mostly a matter "of haphazard shibboleths which habitually broke down in face of knowledge and experience brought against them. In reality there has been no such thing as a coherent and responsible democratic policy on international relations." It is our business to create such a policy, and the Council for the Study of International Relations, of which Viscount Bryce is President, is primarily concerned with this rectification of thought. As its name implies it is educational, not political, and, with the conviction that the final power rests with an educated democracy, it has undertaken the task of providing a more widespread education in international relations than has hitherto been attempted. The Council proposes, by means of study circles, to assist people to understand something of the issues raised by the War, the master ideas which lie at the foundation of our national life, the history of Europe, the philosophies behind policies, and the economic and ethical problems which the War will bequeath to the world. It aims at promoting the true study of these questions, not the mere ventilation of preconceived ideas on international affairs.

There is no real lack of literature, but the great difficulty for the student is that of selection. Many of the books published since the outbreak of war are unreliable, and what is wanted is literature that the student can use with absolute confidence that he is getting hard facts, and that any conclusions drawn from these facts are drawn by men of sound and sober judgment. This is the sphere of the Council for the Study of International Relations. Many of the members of the Council have, of course, clearly defined views on international affairs, but they believe that the permanent solution of these problems can only be advanced by impartial study,

and to further this end they are willing to co-operate with men of divergent views. The objects of the Council are to form groups for the purposes of reading, to outline courses of study, to recommend books on the various subjects connected with international relations, and endeavour in every way to direct into fruitful channels the energy and enthusiasm of the students—in fact, “to create that informed opinion that alone can save Europe from perpetual strife.”

A mere glance at the Near East is sufficient to convince one of the complexity of the problems that confront the student. The immediate cause of the War was an incident which apparently affected only Austria and Serbia. Yet the real truth was that we had to deal with the Austro-German-Russian policy and its endless ramifications in the Balkan States. It is no simple matter to place responsibility in fair measure upon the mixed nationalities and religions to be found within or near the frontiers of Austria-Hungary, the complex of Germans, Magyars, Croats, Serbians, Slovenes, Ruthenians, Italians, Czechs, Slovaks, and Poles. Then there is the old question of the annexation of Bosnia-Herzegovina and the intrigues of the second Balkan War, which in turn takes us to the Turkish invasion and the emergence of the independent Balkan nations from Turkish supremacy. And this leads up to the whole question of Austrian and Russian policy in relation to the Slav States and the question of Constantinople.

Here is a complex of problems that will arise in any attempt to study systematically the origins of the War, and the Council is anxious to do all in its power to make the pathway of the student as easy as possible. For this purpose a Board of Studies has been appointed to give expert advice on such questions. Amongst the men who have consented to help are W. C. Adams, M.A.; Henry Clay, M.A.; G. Lowes Dickinson, M.A.; G. P. Gooch, M.A.; A. J. Grant, M.A.; A. D. Lindsay, M.A.; Ramsay Muir, M.A.; A. L. Smith, M.A. Apart altogether from the general study of politics, economics, and law, there is room for a great development in the education of public opinion. Knowledge is the only effective factor in moulding such public opinion, and therefore the more we spread information in all classes of society, the more we remove the ignorance of other nations which is so fruitful a cause of mischief, the more likely we are to create the conditions of a permanent peace when the time comes to sheath the sword. The first step for the nations of Europe, if ever better relations are to exist, is to study and understand one another. If the Council (1 Central Buildings, Tothill Street, S.W.; Sec., Arthur Greenwood, M.A.) can assist teachers in this important work, it will have succeeded in the object for which it was established.

EDUCATIONAL AGENCIES.

WE lately received from an eminent head master a letter taking us to task for admitting the advertisements of certain educational agents. The letter, though in no sense private, was marked, apparently as an afterthought, “not for publication,” and we might allow the matter to rest there, but it raises such important issues that we determined to investigate the case and invite those who are concerned to formulate their charges against these agencies.

Let us admit at starting that the business presents a happy hunting ground for quacks and impostors, and that the head masters and head mistresses are fully justified in their attempt to limit the operations of irresponsible amateurs by means of joint agencies and University Boards of Employment. Let us further admit that the proprietors and editor of a journal are accountable for the advertisements that appear in its columns, but it is clear that only a general censorship can be required of them. Bogus companies, quack nostrums, pornographic books, if known as such, will be rigidly excluded, but it is obviously impossible for any

journal, however carefully conducted, to vouch for the *bona fides* and trustworthiness of every new firm of agents that sends in an advertisement. Only by their fruits can we know them, and all that *The Journal of Education* can boast is, that whenever an educational society or agency has been detected in fraud or imposture its advertisements have been refused.

The gravamen of our correspondent's complaint is that *The Journal* should have accepted the advertisement of an agent who, on the strength of information picked up in tout-ing for purchasers of photographs of schools, professes to recommend schools to parents, and to obtain pupils for masters and mistresses. The particular firm in question is new to us, and if, on inquiry, the charge is established, the peccant advertisement will not appear again. But there are other long established and well accredited agents who make the same profession, and it is in their behalf that we would plead. If an evil—like competitive examinations—they are a necessary evil; and, though head masters may bar them, like the astrologers in ancient Rome, they will continue to be employed, at least by the weaker brethren. Resolutions may be passed by Conferences declaring it unprofessional conduct either to advertise a school or to accept the services of an agent in obtaining pupils; but what guarantee have we that they will be followed even by the six hundred members of the two Conferences? We are still far off from being a profession to take rank with the other learned professions, and we must wait another three years before even the moderate requirements of the Teachers' Registration Council come into force. Of the children of the middle classes, half are still educated in private schools, and of private schools there is absolutely no pretence at inspection. Anyone, whatever his antecedents, is at liberty to put a brass plate on his door with “The College for Young Gentlemen” or “Young Ladies' Academy,” and, except the Sanitary Inspector, no one will interfere with the private venturer. We need not point out how different are the conditions of things either in France or Germany. That was done half a century ago by Matthew Arnold in his *Schools of the Continent*.

Into the records of one of the agencies whose proceedings have been questioned we have taken the pains to inquire. We find that the United Kingdom is carefully mapped out into districts, and of the schools in each district careful records are preserved. The correspondence of the present year shows that parents from every quarter of the globe seek advice as to where to place their sons and daughters. An officer summoned to join his regiment in India requires a school for two boys, aged nine and ten, in a bracing climate not on the sea coast; a widow, unversed in educational matters, inquires where she can place two daughters, aged fourteen and fifteen, at a cost of £100 a year, to enable them to earn their living by the time they are eighteen; a father consults as to where to send his boy, who is at a public school and “doing no good there.” More to the point are grateful letters from parents who have profited by the agents' advice. It is clear that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence.

THE following candidates gained the Gold and Silver Medals offered by the Associated Board of the R.A.M. and the R.C.M. for the highest and second highest Honours marks respectively in the Advanced and Intermediate Grades of the Local Centre Examinations in the March-April period of this year, the competition being open to all candidates in the British Isles:—Advanced Grade, Gold Medal—Florence A. M. Oliver, Hereford Centre, pianoforte; Advanced Grade, Silver Medal—Stanley Kaye, Sheffield Centre, pianoforte; Intermediate Grade, Gold Medal—Cicely Newborn, Guildford Centre, pianoforte; Silver Medal—Marjorie M. Beerling, Margate Centre, violin.

THE WAR AND GIRLS' EDUCATION: ONE ASPECT.

The Winning of War.

TO those of us who have not been wholly occupied with practical work connected with the War, and have thus had time to ponder over the amazing happenings of the last eighteen months, many factors in our national life and character have been revealed with striking clarity which during the long years of peace had escaped our notice or had been consciously disregarded. The virtues of courage, self-sacrifice, loyalty, and disciplined co-operation among all classes for the common good, so seldom used as levers in civil life, have been displayed with a passion that would seem to indicate the burning and almost universal desire of mankind for an opportunity to practise them. Men in their millions have volunteered for active service, knowing full well the cost; women, with none of the glamour and comradeship that "off to the Front" means, have sent their best beloved and for the sake of honour and duty have borne the terrible anxiety, the separation and, in many cases, the actual privation which a war entails. Nobly has the nation borne its awful ordeal; and the future historian will record with admiration a fact unique in the world's records—in the greatest War in modern times, one of the combatants, the British Empire, rallied to its support a voluntary Army of over five million men.

Yet, if the war has shown the nation's magnificent virtues, it has also made us aware of its failings. Lack of organization, want of method and thoroughness and forethought in all departments of life—in the State and in the home—these have been glaringly apparent. Waste in the feeding of the recruits, waste in the feeding of the family; money carelessly spent on drink and on pleasure and on dress; neglect of the children by their natural protectors, the mothers, and by those who with leisure and knowledge at their disposal had here in the case of babies an ample field for the exercise of their peculiar womanly qualities. The manly man sees his duty in the armed protection of his country, the womanly woman in the preservation of that country's children.

Education for Peace.

"It must be part of the education of the ordinary citizen to recognize an opportunity for service in a life of honourable industry, in a life of creation rather than in a life of destruction, in the arts of peace rather than in the arts of war" (Sir Oliver Lodge, January 3, 1916). These admirable words bring us back to fundamental principles. What is the main object of girls' education? A few years ago many educationists would have probably said "to prepare them for earning a living." To-day, in spite of the fact that thousands and thousands of girls are forced by the necessities of war to enter the industrial struggle, some of the best thinkers feel that, as the conservation of the family is now more than ever woman's supreme task and her most valuable contribution to the nation's welfare, she must during her school years be specially prepared for her high calling.

Too long have we neglected in the schools these subjects which are essential to all classes, and in their place have forced upon our girls those which can only be usefully learnt as the superstructure after the foundation has been firmly laid. Hygiene and the laws of health, housewifery, cookery, and mothercraft must be learnt by all. "In the education of girls," to quote again from Sir Oliver Lodge, "were we giving sufficient attention to home management? Surely no education could be more vital than a knowledge of how to deal with infants, how to preserve them from premature death, and bring up the citizens of the future in health and strength." The War, by depleting the manhood of England, of rich and poor alike in ruthless fashion, has set an enhanced value on the infants *in esse* and on those about to be born. Now is, indeed, the time appointed for teaching every young girl the elements of the arts of peace, the management of the home, the feeding and care of the young, the

preservation of health, economic cookery. Domestic work, at its best both an art and science, at its worst sordid drudgery, has been despised by a whole generation of women. If this sorely tried nation is to rise nobly from the catastrophe which has befallen it, the women of the Empire must play a great and leading part in its reconstruction.

Extension of the School Age.

There is no doubt that the War has emphasized in the minds of thoughtful men and women the urgent need for a longer period of education. Girls, like boys—but that is another story—leave the elementary schools just at an age when they need and respond to guidance, and when they would be able to appreciate those subjects of study which help to make happy homes and healthy human beings. If, as it is hoped, the school-leaving age will be raised to fifteen, at least half of this extra year might well be spent by all pupils in concentrating largely on the domestic arts—not, of course, to the exclusion of other subjects.

A distinction must, of course, be made in the curriculum between those who will remain at school till seventeen and eighteen and those who must leave at fifteen and either earn their living at once or prepare for so doing. But there is no reason why "secondary" education should not include every variety of education for pupils over twelve years of age or so, nor why pupils of all social ranks should not be taught together, and thus break down the barrier between class and class which is so much stronger in this country than on the Continent. Probably the War that has so greatly democratized the Army may in time influence the schools in the same direction.

The first six months of the year fourteen to fifteen, in the case of those pupils leaving at the latter age, might be devoted to a thorough training in housewifery, this term to include the elements of what the head of a household, however small and humble, requires to know if she is to perform her duties satisfactorily. This would not necessarily mean the exclusion of all other subjects. Indeed, it is essential that for those who must leave school at fifteen some kind of training in the choice of books and in civics should be given. The reading of good English novels and the training of taste in art, literature, and—dare I say it?—dress, should be obligatory in all schools.

There is no need to dwell on the importance of the study of civics, for now that women are working in all trades and professions, side by side with men, it is more than ever necessary that they should understand the constitutional government of the State and Empire and the duties and responsibilities of the citizen. The last six months might profitably be spent in vocational work.

Discipline and Service the Watchwords.

Throughout the whole school period the training of character, rather than the acquirement of knowledge, should be the key-note. This, however, is practically impossible while classes of forty to sixty still exist. It is the urgent duty of all who desire to raise the standard of national character in this country to press for the reduction of these monstrous classes. It is a farce to talk of "educating" children *en bloc*—it can't be done. They can be dragooned into quietude, but no true discipline is possible. Yet probably the most valuable asset a pupil can acquire while at school is *self-discipline*, the want of which has been the worst feature in our modern life. Self-discipline and the desire to serve go a very long way towards the making of the ideal citizen.

War has in striking fashion called forth these two noble qualities among thousands of men and women in whom hitherto they were dormant. It remains for peace to indicate how they may be employed permanently in the service of the State and of humanity.

F. B. Low.

IN a large Girls' High School the number of girls taking German has dropped from 120 to 40.

SAFE NOVELS.

- (1) *The Mammoth*. By STANLEY PORTAL HYATT. (Werner Laurie.) (2) *As it Chanced*. By H. B. MARRIOTT WATSON. (Methuen.) (3) *The Yeoman Adventurer*. By GEORGE W. GOUGH. (Methuen.)

These books all belong to the very numerous class which we will call "incidental fiction." Its characteristic is that whatever the theme—historical romance, sentiment, sensation, modern intrigue—the interest lies solely in incident, the psychological interest being nil. The fiction is encouraged that all reverses come from villains, that faith of lovers is shaken only by intrigues external to themselves, that good fortune in the end awaits the hero, and that rascals get what they deserve in this life. One pleasing characteristic of such fiction is the ease with which undesirable characters are disposed of when their undesirableness is no longer essential to the plot. Mr. Marriott Watson attempts a deeper note in some of his tales, but a motive whose interest could only be psychological is still treated on the incidental method, and the result is an incongruity, the characters remain inanimate, events shock, but do not move. Ninety-nine per cent. of our plays present, of course, a close parallel to this type of fiction. The public which visits one reads the other. No doubt the public does not really believe in either, but is content to be vaguely stimulated, safely shocked, and mildly amused.

Oblomov. By IVAN GONCHAROV. Translated from the Russian by C. J. HOGARTH. (6s. Allen & Unwin.)

Oblomov was published (simultaneously in Russian and German) in 1858, and it is surprising that so popular a romance by an author who is rightly acclaimed at home the forerunner of Tourguénief and Tolstoy should have up till now found no English translator. Like Tolstoy's *War and Peace*, with which it is almost contemporary, *Oblomov* is a romance rather than a novel—a series of panoramic scenes, loosely connected, with little attempt to weld them into an artistic whole. Most of the characters pass like shadows in a kinema, but the hero stands out as *magni nominis umbra*, and, as Mr. Maurice Baring tells us, is no less familiar to a Russian than Tartuffe to a Frenchman or Pecksniff to an English reader. In a lesser degree we realize Scholtz, the faithful German comrade of his early days, Olga, the girl who, if any mortal power could, would have cured him of his apathy, and Zakhar, the old henchman, faithful to the end. The radical defect of the book is that we have to take on trust the innate nobility of the hero, revealed only by the devotion of all who come in contact with him when he is a man who has lost all powers of will and action. In this case the half is not greater than the whole, and we cannot congratulate the translator on his omissions, of which no warning is given to the reader.

CORRESPONDENCE.

"M. PAUL SABATIER."

To the Editor of the Journal of Education.

SIR,—Some of your readers may have shared my own confusion in reading an earlier issue of *The Journal*, wherein Mr. Gosse is reported as quoting "M. Paul Sabatier" in a sense very different from that of the lectures at Bedford College last autumn. There are, unfortunately, two distinguished Frenchmen who have an equal right to the name, one the author of *La Vie de St. François d'Assise*, *Les Modernistes*, *L'Orientation religieuse de la France actuelle* (published in English as *France To-day; Its Religious Orientation*), and the Bedford College lectures published as *A Frenchman's Thoughts on the War*; the other Professor of Chemistry at Toulouse and a Nobel Prizeman. I understand that the disturbing view quoted by Mr. Gosse is that of the Toulouse professor. It is emphatically opposed by the biographer of St. Francis. In his Bedford College lectures he said: "Germany, once crushed on the field of battle, will need to relearn everything. In this task we must give her our brotherly help." The italics are mine.—Yours faithfully,

HENRY BRYAN BINNS (translator of *France To-day*).
Crockham Hill, Edenbridge, Kent.
Easter Sunday, 1916.

THE ASSOCIATION OF SCIENCE TEACHERS.

To the Editor of *The Journal of Education*.

DEAR SIR,—In the April number of *The Journal of Education* there is a note criticizing the so-called "ready-made syllabuses"

which have been drawn up by the Association of Science Teachers. I quite agree with my critic that such syllabuses as he describes should be condemned, as individual schools have individual requirements; also, every teacher should have sufficient individuality to draw up his or her own scheme of work.

The syllabuses drawn up by the Association of Science Teachers were not meant for publication, but for discussion by its members, so as to give some suggestions as to the work which might be required for examinations at the ages of sixteen and eighteen. We understand that such examinations are being considered by the Board of Education.—Yours faithfully,

R. STERN,

Hon. Secretary of A.S.T.

4 Birchington Road, West Hampstead, N.W.

May 25, 1916.

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

Dr. Snedden, Massachusetts Commissioner of Education—who goes, if we are rightly informed, to Columbia University as professor—writes ably in the *School Review* (XXIV, 3) on "New Problems in Secondary Education." His final and general thesis is this: "All education is tending to become scientific, to become a field of applied science, as are already medicine, war, navigation, agriculture, metal working, and the like. But efficiency of action in any field of applied science is possible only on the basis of clearly defined aims. Right methods and sound testing of results are practicable only as they are consciously and specifically based upon clearly defined and carefully tested aims. To prove itself capable of developing, in accordance with scientific standards and principles, education must, in all its phases, formulate and study its new problems of aim." If we bring aims and the means by which we are attempting to realize them under scrutiny, we shall find many defects. For example, secondary education aims at producing the socially and personally efficient adult—efficient in respect of *living* no less than in *making a living*. The lesson how to live is got painfully without a knowledge of the fundamental principles of psychology. The secondary school should give, in some form, this knowledge, and also training in the application of it to the interpretation and control of the personal and social affairs of life.

Kansas, rich in grain and cattle, is concerned for education as well as for the amassing of wealth. It is to Kansas that are due the Silent Reading Tests, described in the *Journal of Educational Psychology* (VII, 2), which probe the power of a child to get meaning from the printed page. Kansas, again, is interested in orthography, and the Senate of its University has declared, in a formal resolution, "that the present spelling of English is irrational and confusing, that it involves much waste of time, and that it would be well if the principal English-speaking peoples could agree upon such modifications as would eliminate the worst features of the present system without radically transforming it." But the Senate does not consider that agreement as to reform has yet been reached, and desires the appointment of an international committee to determine the necessary changes. We welcome the suggestion that Britain should be consulted. Kansas has its State Board of Education issuing annual Reports, and the second of these bears witness to much educational activity. It tells us that women advisers, "assisting girls with counsel and directing their social energies, have been found serviceable in all the State institutions of education." The Board is about to arrange a series of lectures for women students by a woman to enable them to understand themselves and their life relations. It is pleasant to learn also from the Report that Kansas pays much attention to music as "a home-building, home-saving, civilizing influence."

A medical writer in *Educational Administration and Supervision* (ii, 3) treats of the problem of speech defects in public schools. We take from him a hint upon the subject of stuttering. A certain "professor," we are told, has been travelling about the United States, both persuading superintendents to form classes of stutters in the public schools and advertising in the newspapers for private pupils. A little improvement in the patients becoming apparent, he obtains testimonials, collects his fees, and departs. Presently it is clear that no cure has been effected. A mother with 500 dol. in

the bank wrote to a "School for Stammerers" in the West with respect to a treatment for her son, a child of six. She was induced by the "School" to pay 100 dols. a month for three months, whilst the remaining 200 dols. were spent for the journey, &c. Upon the return of the child no improvement in his speech could be discovered. The mother's money gone, she went to a medical expert for an opinion. A physical examination, followed by a careful mental examination and speech tests, showed that the boy's case was an incurable one of congenital disease. Not until medical experts have been consulted is it safe to rely on the speech expert, even if his methods be sound and his purpose honourable.

FRANCE.

"Grave as are the events of the day," says a recent ministerial circular, "they must not cause us to neglect certain steps, the utility of which, if not immediate, will be manifested in the future. The War over, the school of the nation will have to accomplish a work more important than any that it has done in the past. Its task will be to quicken and increase the intellectual and moral development of the country. That it may perform this task efficaciously we may properly, even now, seek means of vivifying instruction, and of utilizing all the resources that science puts at our disposal." The particular means that the Minister of Public Instruction, writing thus, has in view is the rational use of cinematography. The kinema, he tells us, satisfies the natural delight of the child in the image, and, enabling us to submit the thing to the eye whilst we suggest the idea of the thing to the mind, it facilitates the work of the intelligence and enlarges the domain of experience. A strong *Commission extra-parlementaire* is nominated to study methods of making the employment of the kinematograph general in the various branches of instruction, the Minister himself—M. Paul Painlevé—being President of it, and M. Steeg, the illustrious Senator, one of the Vice-Presidents.

The War has not changed, and will not change, the attitude of the Catholic Church to co-education, which war has in some places compelled. At Serres (Hautes-Alpes), for example, the pupils of a boys' class and of a girls' class were combined, owing to the fewness of rooms available, in a mixed course. The lay authorities stated that the arrangement had produced no ill effects, and had even been favourable to study. "To study? it may be so," comments the clerical *Bulletin de la Société générale d'Education* (XLVII, 1). "But to the moral formation of each of the two sexes co-education can be only hurtful, and the system, even as an expedient and a measure imposed by temporary difficulties, has always found in the Church, guardian of the virtue and the innocence of youth, a resolute adversary." It will be understood that we are reporting objectively. We remark, however, that pedagogues of all sorts agree that there are unsolved problems in connexion with co-education. To solve them or to pronounce them insoluble we need experiment—the mode of inquiry which the Church, acting within her rights, opposes.

In July 1915, the Ecole de Commerce of Montpellier asked the Ministry of Commerce—or may we say Board of Trade?—to sanction the participation of girls in higher commercial studies. The permission sought was granted, and since October 1915 there have been seven girls—five received from the girls' *lycée* and two on passing the entrance examination—studying in the Montpellier Ecole de Commerce. With injurious results? The men students have become more courteous, have ceased to smoke in the corridors, have cleansed their language. The Schools of Commerce at Alger, Bordeaux, Dijon, Le Havre, Nancy, Rouen, and Toulouse have also, as a consequence of the Minister's sanction, admitted women; at some other towns (Lyon, Marseille, and Paris, for example) the same course has not yet been taken. The concession to women is an effect of the extension of the vocational movement. For the girl there is vocation (distinct from the old Catholic vocation) as well as for the boy; it calls in vain if there be no training for it. As for commerce, it is sixty years since a German, Gustav Freytag, in *Soll und Haben*, revealed it as a land of romance; it is the Germans who to-day are unconsciously widening for women the gates of entrance to that land. With intelligent study commerce grows to mean something more than a mere trafficking in goods.

A French inspector laments that in his Department (Drôme), since the beginning of the War, the teaching and the practice of singing have been neglected in a large number of schools. Many primary teachers, men and women, he says, have been grievously stricken. But they should not let themselves be depressed; rather they must be examples of energy. Nor should the home protest against singing in the school whilst father and brothers are exposed to peril. For

singing is not the utterance of gaiety only; men sing whenever the mind is exalted—at patriotic ceremonies, in places of worship, over the guns. Let the children sing daily—the windows wide open, so that the fresh air may flow in and the strains be heard outside—the *Marseillaise* or the *Chant du Départ*, the words of which, dating from 1792, express with striking exactness the situation of France in 1915. Or let them raise their voices in the *Brabançonne*, in the English National Anthem, and in the Russian. Let them practise assiduously also the common school songs: *Où t'en vas tu soldat de France*, *Martyrs sacrés*, *Chanson d'Alsace*, *Les Vaillants du temps jadis*, *Les trois couleurs*, &c. The French inspector is right; the brave heart as well as the light heart utters itself in song. Let both French and English children sing!

QUEENSLAND.

When is compulsory education not compulsory? It is a question on which our Board of Education, if it had leisure, could collect some instructive figures. In Queensland, as the local *Education Journal* (xxi, 12) regrets, the Compulsory Education Law has many loopholes of escape. An ingenious parent, unless he is foolish enough to be openly defiant, can generally evade all penalties for the non-attendance of his child at school. If the teacher follows up the absentee persistently, he may reap nothing but a harvest of trouble for himself. The application for "exemption" is a favourite device of a greedy father. The child is put to work in the long vacation; when school begins, it is protested that he has become indispensable. Were we writing of England, and not of Queensland, we could say more.

UGANDA.

An "Imperial Conference Paper" with which we dealt recently treats of Uganda as well as of East Africa. The Protectorate, as enlarged in July 1896, has an area of about 121,500 square miles, being between British East Africa on the east and Belgian Congo on the west; between the Sudan on the north and German East Africa and Lake Victoria on the south. It is the newest of new countries, for it was only in 1862 that Captain Speke, the first European to visit the Kingdom of Buganda, arrived. To the King, or "Kabaka," of Buganda the title of "His Highness" is accorded, and he has rights and privileges determined by treaty. The population, as calculated on March 31, 1914, was:—

Europeans (men)	761
Europeans (women)	256
Asiatics	3,651
Africans (estimated)	2,904,454

Total 2,909,122

Education is wholly in the hands of the Mission Societies, and the section of the "Conference Paper" relating to Uganda is made up of the reports of (i) the Church Missionary Society, (ii) the White Fathers (French Catholic), and (iii) the Mill Hill Mission (Catholic).

The Church Missionary Society has gone to work very systematically. There is a constituted Church of Uganda, with a Bishop and a Diocesan Council, whilst to control education a Board of Education is chosen, consisting of five European missionaries and four native members, with the Bishop as Chairman. The principles of the Board are to produce not only well trained clergymen and teachers—the teacher's is recognized as a high calling—but also upright traders, clerks, interpreters, and, above all, chiefs; to subordinate book knowledge to education by and to labour; and, as a practical policy, to make the schools self-supporting. The medium of instruction is always the vernacular (some language of Bantu origin); but at higher grade schools English is taught. Several village schools are under the church "teacher," an evangelist whose main business is to prepare candidates for baptism; other villages have "pupil-teachers": whilst larger places have more highly organized schools under a schoolmaster trained at the Normal School. At certain mission stations there are higher grade (Anglo-vernacular) schools for boys. The Government grants seem to be inadequate; the Normal School, for example, receives only £100 a year towards upkeep and the pay of assistants.

The White Fathers give teaching to the youth of the country (ii) the White Fathers. (i) in rural and central primary schools, (ii) in high schools, normal schools, and seminaries. In the primary schools religious and secular instruction are closely united; a candidate is not, as a rule, admitted to baptism unless he can read, and baptized children follow a course of instruction as a preparation for the reception of the Sacraments. Owing to these conditions a large number of

children learn to read. Writing is taught in a four years' course at all the Mission stations and at other centres of population. But—it is a remarkable fact—writing is, in general, withheld from girls who work in Uganda upon the soil. "Exception to this rule is made (1) in the case of wives and girls in a comfortable social position, who have, or will have, servants to cultivate their gardens for them; (2) in the case of women who propose to take up the work of teaching. When a girl of ordinary social condition, obliged to work to gain her livelihood, begins to handle the pen, experience shows that she very soon gets disgusted with the hoe. The pen is useless as a means of gaining a living for a woman; the girls who can write, if they are low born, become dissatisfied with their lowly position, make a show of pedantry, and very often, alas! give themselves up to prostitution. It is in order to avoid this calamity that the White Fathers do not, as a rule, teach writing to women." Whether this withholding be justified or not, the Fathers are doing much good work. Among the institutions controlled by them are Normal Schools, one for men, one for women teachers, and a special school (St. Mary's) for the teaching of English, attended principally by the sons of chiefs.

The work of the Mill Hill Mission is carried on for natives only in the Upper Nile Vicariate, in 309 village schools, 19 mission station schools, 2 convent schools, and 2 high schools. The building of a village school is only a thatched hut of wattle and daub. Near it the native teacher has his beehive-shaped dwelling. Every morning he calls his pupils together by beating a special tattoo on a little drum. The children in the village schools learn the alphabet and to repeat some prayers and the Catechism; they are then transferred to mission station schools, where, under European supervisors, more serious, if still elementary, education can be got. The two convent schools are in charge of Franciscan nuns from St. Mary's Abbey, Mill Hill. Of the two high schools, one is a boarding school for the sons of chiefs, the other is for poorer boys; the education in both is such as to fit for clerkships or for employment as interpreter. The mission seeks to stimulate also, so far as is possible, a love of manual labour.

(III) Mill Hill Mission.

UNIVERSITIES AND SCHOOLS.

SCOTLAND.

The news of the sudden death of Prof. Allan Menzies has caused universal regret. He was a student of St. Andrews in the days of the College Hall, and among his contemporaries were Andrew Lang and others who afterwards achieved distinction. After sixteen years' service in a county parish, he returned to St. Andrews in 1889 as Professor of Divinity and Biblical Criticism. He was the author of valuable books on the history of religion and on the Gospel of St. Mark, and he was editor of the *Review of Theology and Philosophy*. An admirable scholar, simple and direct in speech and writing, great of heart and rich in humour, he was beloved by his students and by all who knew him, and his passing is a heavy loss to his University.

St. Andrews.

The new draft Ordinance regarding preliminary examinations, which has been the subject of deliberation between the Universities for several years, was considered at the spring meeting of the General Council and at the May meeting of the University Court. The General Council, by a majority, passed a resolution that a representation should be made to the University Court that the Ordinance should not be proceeded with, mainly on the ground that the Ordinance should not be completed until it has been ascertained whether the Scotch Education Department will co-operate in the conduct of the examinations. At the meeting of the University Court it was pointed out that the Ordinance had already been completed and approved by the Court, and it was resolved to inform the General Council that the question of proceeding further with it would rest with the Privy Council. It should also be noted that the Ordinance itself makes provision for co-operation with the Education Department, if the Department is willing to confer on the question.

Glasgow.

Dr. Ludwig Becker, Professor of Astronomy in the University, has been granted leave of absence from his University duties, in consequence of a suggestion from the Secretary for Scotland that he should relinquish the occupation and control of the Observatory. Prof. Becker, who was appointed by the Crown in 1893, holds his commission for life, and he became a naturalized British subject when he was quite a youth. The only charge made against him

is that he was born in Germany, but there has been for some time an ignorant press campaign against him, of which many of the citizens of Glasgow are ashamed.

On April 28, Mr. Hughes, Prime Minister of Australia, visited the University and received the honorary degree of LL.D. The same degree is to be conferred on Emeritus Prof. Ferguson at the Graduation in June. The University was also visited in April by the party of French Senators and Deputies who were at that time travelling in England and Scotland. They were received by the University authorities, along with the Franco-Scottish Society, and addresses were given in French and English on the relations between the two countries and their Universities. A similar visit was paid to the University on May 15 by the delegates from the Council of the Russian Empire and the Duma, the Russian Society of Scotland being associated with the University in their reception. The Principal welcomed the delegates in Russian, French, and English, and Prof. Vassiliev replied in English.

The number of men students who matriculated in Medicine for the summer term is 51, compared with 70 last summer. Practically all of them are under military age. The number of new women students in Medicine is 20, compared with 10 a year ago. The total number of women students in Medicine is now 207.

The late Lady Kelvin has bequeathed to the University £5,000 and all the decorations and medals conferred on Lord Kelvin. The money bequest is to be applied by the Senate for promoting research and teaching in physical science in connexion with the Natural Philosophy Chair, which Lord Kelvin occupied from 1846 to 1899. Mrs. Martin has given to the University the scientific property of her late husband, Mr. Charles H. G. Martin, Demonstrator in the Natural History Department of the University, who fell at Ypres a year ago. Mr. Martin was one of the most promising of the younger zoologists, and his collection is of great value for purposes of research, especially with reference to the protozoa of the soil.

At the spring meeting of the General Council a proposal was discussed to ask the University Court to consider (1) the recognition of an appropriate school certificate as the normal channel of entrance to the University in any Faculty—the University to reserve power to demand proof of proficiency in any subject before admitting to a class in that subject; (2) the institution of a degree in Divinity, which, like M.B. and B.L., should not involve the possession of an Arts degree, but should be recognized by the Church as qualifying the holder to be taken on trial for licence. The proposal with regard to a uniform entrance certificate was adopted, but the second proposal was rejected by a majority.

Aberdeen.

The Curators of Patronage have appointed Sir James Alfred Ewing, K.C.B., Director of Naval Education since 1903, to be Principal of the University, in succession to the late Sir William Turner, K.C.B. The new Principal is a native of Dundee and a graduate in Arts of Edinburgh University. He was for five years Professor of Mechanical Engineering in the University of Tokio, Japan, and he afterwards held the Chair of Engineering at University College, Dundee, and the Chair of Mechanism and Applied Mechanics at Cambridge. He was Rede Lecturer at Cambridge in 1904, and he has received several honorary degrees as well as other marks of distinction. He is the author of numerous books and papers on scientific subjects, especially on magnetism and the physics of metals and on engineering.

Edinburgh.

The death of Emeritus Prof. Sir Alexander R. Simpson, M.D., LL.D., as the result of a motor-car accident in darkened streets, has caused much regret in the University. He was a nephew of Sir James J. Simpson, celebrated for his introduction of chloroform as an anæsthetic, and he succeeded him in the Chair of Midwifery at Edinburgh. For thirty-five years he was a successful teacher of his subject, and he was held in high esteem and affection by his colleagues and students.

The University has also suffered a great loss in the premature death of Mr. William R. Hardie, Professor of Humanity since 1895. He graduated M.A. with Honours in 1879, being the most distinguished man of his time in the Arts Faculty. Afterwards he had a remarkable career at Balliol, winning the Ireland and Hertford, the Gaisford prizes for Greek verse and prose, the Latin verse prize and the Craven and Derby Scholarships. For eleven years he was a Fellow and Tutor of Balliol, where, as afterwards in Edinburgh, he was an excellent teacher as well as a brilliant scholar.

The General Council, at its meeting in April, approved the Draft Ordinance instituting a degree of Bachelor of Education. The original Draft Ordinance was withdrawn, and, after conference with Glasgow University, it has been reissued in a modified form. The regulations for the University Diploma in Education

have been embodied in the Ordinance, and the examination for the Diploma now becomes the first of two examinations for the degree. A course of two years is now required for the degree, in addition to the minimum number of years required for degrees in Arts or Science, and the courses and papers for the final examination must be of an Honours standard. As the result of this last provision the new degree becomes analogous to the degree of B.Sc., and those who obtain it will be qualified to proceed at a later date to a Doctorate in Letters, Philosophy, or Science. Glasgow University is preparing an Ordinance on similar lines. These modifications have very much raised the value of the degree as compared with that of the degree indicated in the original Draft Ordinance.

The delegates from the Russian Imperial Council and Duma visited the University on May 16, and were received by the members of the University Court and the Senators. Mr. Hughes, the Prime Minister of Australia, also visited the University and received the honorary degree of LL.D.

The draft scheme for the proposed Union of Teachers is being considered by the various branches of the Educational Institute and other associations of teachers. It is being generally approved; but, in many branches of the Institute, it is suggested that the proposal to give to the secondary teachers a fourth of the representation on the proposed Council should either be reconsidered or should be accepted only as a temporary provision.

Union of Teachers.

IRELAND.

Educational work, like every other department of civic life, has been somewhat disorganized by the unhappy events which took place in Dublin during Easter week. The Dublin schools all gave an extra week's holiday and did not resume work till the middle of May—and possibly some of the younger folk may not have considered the disturbances an unmixed evil. On April 19 Trinity College and University College both wound up the spring term by holding meetings for conferring degrees. The Easter vacation, however, turned out an arduous and anxious time for Trinity, though its students were disbanded. On Easter Monday, when the insurrection broke out, some thirty members of the Officers' Training Corps mustered as a garrison and held the fort, aided by sundry volunteers, till they were reinforced by the military on the following Wednesday. The College forms an important strategic position, commanding as it does three of the principal thoroughfares of the city, and with its façade projecting considerably beyond the buildings on the same side of Westmoreland Street and Sackville Street to the north; and from the roof of this front building a constant fusillade was directed on Wednesday and the following days against the main posts occupied by the insurrectionists north of the river. It was no doubt owing to the part played by the College and its garrison that the south side of the city escaped so well from the consequences of the rising and its public buildings did not share the fate of so many lying further north. The College itself sustained no damage except for a few bullet marks, scarcely noticeable, on its façade. The ambulance corps did its share during the troubles. On May 13 a review was held in the College Park by General Sir John Maxwell, who inspected the Officers' Training Corps of the University, as well as that of the Royal College of Surgeons and several other training and ambulance corps, and thanked the Provost and the officers and men of the Corps for the services they had recently rendered. Mr. Asquith, who had then arrived in Dublin, was present, but did not respond to calls for a speech. At a meeting of some of the principal property owners and traders of Dublin, held a few days later, a resolution of thanks was passed to the Officers' Training Corps, and a committee was formed to raise subscriptions for a lasting memorial in the University of their services, to take the form of a cup or medals or a scholarship, as might be hereafter decided.

Mr. Edward H. Taylor, F.R.C.S., has been appointed to the Regius Professorship of Surgery, left vacant by the death of the late Sir Charles Ball.

The Irish National Teachers' Organization opened its annual Congress in Cork on April 25. The President, Mr. George O'Callaghan, in his address dwelt mainly on the drawbacks by which primary education in this country is hampered, and complained that many valuable suggestions made by the Viceregal Commission of Inquiry a few years ago had been treated as waste paper. He suggested that it would be well for the National Board to fix a maximum school day, as they have already fixed a minimum one. School hours, indeed, whether in secondary or in primary schools, are a matter which calls for reform in this country. Meantime, Irish school-children have some reason to be thankful for the Daylight Saving Bill, which enables them to get out of school earlier and have more of the bright part of the day for their own devices.

Questions put to the Chief Secretary in the House of Commons in the latter part of April on the subject of manual instruction and medical treatment in primary schools elicited the information that the National Education Commissioners have at present no funds available for manual instruction and that the scheme for medical treatment drafted in the summer of 1914 must remain in abeyance for lack of funds. In the meantime, the Roman Catholic Working Boys' Technical Aid Association is doing good work in Dublin by holding evening classes for working boys, to prepare them for entrance to the trade and technical schools of the city, and save them from the impasse in which so many juvenile workers find themselves about the age of fifteen or sixteen, when their employment comes to an end and they are left unfitted for any calling.

One recent piece of legislation which we may welcome is the Provision of Meals (Ireland) Amendment Act, which raises the rate for feeding necessitous school children from 3d. in the £ (the amount fixed by the Act of 1914) to a penny. The former rate was found insufficient to give anything like effective aid, though it did something, as many as 5,238 children having benefited by it in the city of Dublin during last winter. The Act, it may be added, contains safeguards against allowing parents to neglect their responsibilities in the maintenance of their children.

The Teis Ceoil (or Annual Musical Festival and Competitions), which was to have been held in Dublin during the week May 8-13, has been indefinitely postponed owing to the recent disturbances. The Alexandra College Guild had fixed its annual Conference for May 13, but, for the same cause, it was impossible to hold it.

Now that we are passing through a change in the government of Ireland and are soon to have a new Chief Secretary, it is timely to recall the debt which Irish education owes to Mr. Birrell during his nine years of office. Mr. Birrell has always been sympathetic with the aims of Irish educationists, and during his time many important changes and reforms have been carried out in our educational system, chief among them the settlement of the University question—a settlement which might not have been so successful and worked so harmoniously but for his personal influence and efforts and the £40,000 grant for secondary education. Those, too, who are interested in the movement for the recognition of the Irish language and of distinctively national elements in Irish education, will recall that he has always shown a certain sympathy with that movement, and did not fail to see that it had a legitimate place, and might be made a force of value, in the education of the country.

An Experiment in Educational Self-Government, by James H. Simpson (Liverpool, H. Young, 1s. net) is a noteworthy sign of the times. That an assistant master in a great public school should have been encouraged by his head master to make it on his own form, and to publish the results, would before the War have been hardly credible. Briefly, Mr. Simpson has applied at Rugby the lesson that he learnt by visits to the "Little Commonwealth." So far it seems to have proved a complete success, and our only criticism is that it needed a combination of many qualities to make it, and that a year is too brief a period for a trial. A form is too shifting a unit, and the passive resistance of other members of the staff would upset the best laid plans; but it was well worth making and well worth recording.

THE forty-second Annual General Meeting of the Froebel Society was held at University College, Gower Street, on Thursday evening, when the incoming President, the Rev. Lionel Ford, Head Master of Harrow School, presided and delivered his address on the subject of "Personality in Teaching." The outgoing President, Lady St. Helier, was unfortunately unable through illness to be present, but the President was supported by Mr. C. G. Montefiore (Chairman of the Council), Miss Alice Woods, Miss E. R. Murray, Sir John Kirk, Mr. T. W. Phillips (of the Board of Education), Mr. T. R. Ablett, and other well known educationists. Early in the afternoon a private meeting was held at the Society's Offices, attended by representatives of the Branches. By resolution an important addition was made to the title of the Society, which henceforth is to be known as the "Froebel Society and Junior Schools Association."

A CONFERENCE will be held at Caxton Hall on Friday, June 2, at 4.45 p.m., to consider the recommendations of the Royal Commission on Venereal Diseases. The discussion will be opened by Miss Norah March, and several leading educationists have promised to speak.

It is hoped that another Conference on the Teaching of English will be arranged at Stratford-on-Avon from August 2 to 7. Sir Sidney Lee is again acting as Chairman of the Conference Committee.

PRIZE COMPETITIONS.

The winner of the Translation Prize for March is Allen H. Powles, Esq., 11 Newnham Terrace, Cambridge.

The Translation Prize for April is awarded to "Bion," but between "Bion," *μηδὲν ἄγαν*, and "Senex" there was little to choose.

Quamquam hic quidem tyrannus ipse iudicavit quam esset beatus. Nam cum quidam ex eius adstantatoribus, Damocles, commemoraret in sermone copias eius, opes, maiestatem dominatus, rerum abundantiam, magnificentiam aedium regiarum, negaretque unquam beatiorem quemquam fuisse: "Visne igitur," inquit, "O Damocle, quoniam te haec vita delectat, ipse eandem degustare et fortunam experiri meam?" Cum se ille cupere dixisset, collocari iussit hominem in aureo lecto strato pulcherrimo textili stragulo, magnificis operibus picto, abacosque complures ornavit argento auroque caelato. Tum ad mensam eximia forma pueros delectos iussit consistere eosque nutum illius intuentes diligenter ministrare. Aderant unguenta, coronae; incendebantur odores; mensae exquisitissimis epulis exstruebantur. Fortunatus sibi Damocles videbatur. In hoc medio apparatu fulgentem gladium e lacunari saeta equina aptum demitti iussit, ut impenderet illius beati cervicibus. Itaque nec pulchros illos ministratores aspicebat nec plenum artis argentum nec manum porrigebat in mensam; iam ipsae defluebant coronae: denique exoravit tyrannum ut abire liceret, quod iam beatus nollet esse. Satisne videtur declarasse Dionysius nihil esse ei beatum cui semper aliqui terror impendat.

By "BION."

This Tyrant, indeed, has left us his own verdict on his happiness. For once, when one of his flatterers, a certain Damocles, was expatiating upon his armies, his wealth, the greatness of his power, his vast storehouses, and the grandeur of his palaces, maintaining that there had never been a happier man: "Well, Damocles," said he, "if this is your idea of a happy life, will you taste and try this good fortune of mine?"

And when Damocles said he would gladly do so, Dionysius ordered him to be installed upon a golden couch with a beautifully woven coverlet embroidered with exquisite designs, and surrounded by sideboards adorned with chased silver and gold. He then ordered youths chosen for their good looks to wait upon him and to be at his beck and call. Unguents and garlands were provided, perfumes were burned, tables were spread with the costliest delicacies. Damocles thought he was in luck's way.

But in the midst of all this splendour Dionysius had a shining sword let down from the ceiling by a horse-hair so as to hang over the head of that happy man. From that moment Damocles no longer heeded the handsome youths or the cunningly wrought plate; no longer helped himself to the dainties on the table, the garlands began to drop from his head, and at last he was fain to implore the Tyrant to let him go, for he had no more ambition to be happy.

Plainly, Dionysius meant to say that there is no happiness for one who is always in a state of apprehension.

We classify the 67 versions received as follows:—

First Class.—Senex, V.I.X., Buttercluck, Ardeonaig, Bion, Shax, *μηδὲν ἄγαν*.

Second Class.—A.D., Menevia, Aldus, Monica, A.W.Z., Audax, Acris, Fabius, Borealis, Swinford, Gothicus, Culex, J.E.M., C.M.B., Lyme Regis, S.J.A.L., Claudia, Bia, Chris, B.V.T.

Third Class.—Corncrake, D.M.K., Tilbury, Insanus, Cunc-tator, M.M.H., H.G., Decima, A.J.C., Esperanto, Nona, Agnus, Ben Edar, Hermes, M.B.S., Spes, Namur, Allah.

Fourth Class.—Neapolis, Pearl, Ray the Rat, Sic vos, Dion, Sixth Form, Plancus, E.O., Trenches, Mascot, Puella, Vino, Hospes, Q.R., Samur, Old Fogey, Colomba, Simia, A.N., Oiles, Medico, Iser.

An old contributor has kindly pointed out that the passage from Cicero was set some twenty-five or more years ago, and, on seeking the old files of *The Journal*, we discovered it in November 1886. There were 279 competitors, and the prize was awarded to the Rev. H. A. Dalton, a Winchester Master. The Prize Editor must crave pardon for his lapse of memory, and repeat his opening comments, which are equally applicable to-day. "Cicero is an admirable *raconteur*, and the story of Damocles is so simply told that, though the finer shades may be blurred, it is hardly possible to miss the main drift. Yet the Latin period differs so widely from the English that almost every sentence requires to be recast for the translation to read like a passage of genuine English prose."

(Continued on page 336.)

Mr. John Murray

A PUBLIC SCHOOL IN WAR-TIME.

By S. P. B. MAIS. Crown 8vo, 3s. 6d. net.

This is an attempt to put on record in a series of nineteen short sketches, the many ways in which War has affected the outlook of the youth of to-day. We all recognize that life can never be the same again, and of no side of life is this more surely true than of the Public Schools.

PATRIOTIC POETRY, GREEK AND ENGLISH.

An Address written for the 500th Anniversary of Agincourt. By Professor W. RHYS ROBERTS, Litt.D. With Notes and References and Four Illustrations. 3s. 6d. net.

AN INTRODUCTORY HISTORY OF FRANCE to the Beginning of the XXth Century.

Revised and brought up to date by the addition of Two new Chapters by R. B. LATTIMER, M.A. With Map and Illustrations. 2s. 6d.

This book in its original form was called "Little Arthur's History of France"; but it is not so juvenile as its title would seem to imply. It is suited to readers of fourteen or fifteen years of age.

NEW EDITION, THOROUGHLY REVISED AND RESET.

GEOMETRY. An Elementary Treatise on the Theory and Practice of the Science.

By S. O. ANDREW, M.A. Revised by the AUTHOR and R. WYKE BAYLISS, M.A. 3s.

Having in view the regulations of the Oxford and Cambridge Local, the London Matriculation, the Board of Education, and other Examinations.

London: GEORGE C. HARRAP & CO. 2 & 3 Portsmouth St. Kingsway W.C.

1. "But (if we have any doubt) the Tyrant himself has provided us with an estimate of his happiness."

2. "It happened one day that a courtier, Damocles by name, was expatiating on the resources and affluence of his master . . . when the King broke in." *Nam* is obviously superfluous.

3. "You seem enamoured of my life, Damocles. Would you care to have a taste of it?" *Vis* must be distinguished from *cupere*. "The offer was greedily accepted."

4. *Picto*, of tapestry or rush work, and *abaci* are the movable side-tables or console tables.

5. *Iam ipsae defluebant coronae*: "Its very chaplets faded and drooped."

6. *Denique exoravit*: "So at last in tears he obtained permission to depart, declaring that such a happy life was not for him."

The Translation Prize for May is awarded to "Gothicus."

Je vous écris d'Anvers, cher Louis, c'est tout vous dire ; je suis en pleine Flandre, à même les cathédrales, les Rubens et les Van Dyck. C'est un admirable pays.

Hier j'étais au haut de la flèche de cette merveilleuse cathédrale, et je pensais à vous. Je pense à vous toutes les fois qu'une chose contient un tableau ou une pensée.

Je voyais, du même regard, devant moi la mer et Flessingue à vingt-deux lieues, à gauche la Flandre et les tours de Gand, à droite la Hollande et la flèche de Bréda, derrière moi le Brabant et le clocher de Malines ; puis l'Escaut, large et brillant au soleil, et, entre la mer et l'Escaut, les polders inondés, une prairie de cinq lieues de tour changée en lac, à droite une autre prairie toute verte et scintillante de maisons blanches ; à mes pieds les quelques toits de la tête de Flandre bloqués par l'eau ; sous moi Anvers, qui est, au dix-neuvième siècle, comme était Paris au seizième, un amas magnifique d'églises et d'hôtels, de toits taillés, de pignons contournés, de clochers carrés et pointus, avec mille accidents de tourelles et de façades étranges ; de grosses vieilles maisons amusantes, qui sont la Boucherie, qui sont la Draperie, qui sont la Bourse ; un devant d'hôtel de ville qui ressemble à une architecture de Paul Véronèse, un portail d'église qui ressemble à un fond de Rubens et qui est de Rubens ; mille voiles sur l'Escaut ; dans un coin du paysage le chemin de fer où disparaissait un convoi de wagons, près du chemin de fer une grande étoile de gazon couchée à plat sur le sol qui est la citadelle, enfin au-dessus

de tout cela un ciel de nuages déchiquetés comme dans Albert Dürer avec un beau rayon de pluie qui tombait au loin ; voilà ce que je voyais hier, en regrettant que vous ne le vissiez pas.

By "GOTHICUS."

I am writing to you from Antwerp, my dear Louis ; I need say no more. Here I am, in the very heart of Flanders, within reach of the cathedrals and the masterpieces of Rubens and Van Dyck. It is a delightful country.

Yesterday I ascended the tower of this wonderful cathedral, and I thought of you. I always think of you when anything is worth seeing, or worth dreaming about.

I could see at a glance, directly in front of me, the sea, and Flushing twenty-two leagues away ; on the left, Flanders and the towers of Bréda ; behind me, Brabant and the clock-tower of Malines ; then the Scheldt, broad and sparkling in the sun ; and between the sea and the river, the flooded polders, an area of grass-land, five leagues in circumference, turned into a lake ; on the right, another broad stretch of green pasture-land, with its white houses glistening in the sunlight ; at my feet, the few scattered house-tops of Tête de Flandre, intercepted by the river ; immediately beneath me Antwerp, which, in the nineteenth century, is what Paris was in the sixteenth, a magnificent collection of churches and stately houses, of much-divided roofs, and curiously shaped gable-ends, of square and pointed clock-towers ; with hundreds of turrets of all shapes and sizes, and quaint house-fronts ; solidly built and interesting old public buildings, such as the Meat Market, the Cloth Hall, and the Exchange ; an hôtel-de-ville façade, resembling an architectural study by Paul Veronese ; a church portal, like one of Rubens' backgrounds, and actually his own work ; hundreds of sails on the Scheldt ; in a corner of the landscape the railway, along which a train was gradually passing out of sight ; near the railway a large star-shaped, level plateau of grass, upon which stands the citadel ; and then, above all this, an Albert Dürer sky of ragged clouds, with brilliant shafts of sunlight streaming through a rain-cloud in the distance. This is what I saw yesterday, and I much regret that you could not see it with me.

We classify the 116 versions received as follows :—

First Class.—Gothicus, Anne, Bia, Teucer, Athos, Sirach, Just home on Leave, Ex humilibus excelsior.

(Continued on page 338.)

Bacon's Maps of the Moment

3 School Wall Maps indispensable at the present time in the School following the Geography of the War, but none the less useful for general work. Being in contour layer colouring, they are not affected politically, and WILL NOT BE OUT OF DATE WHEN THE WAR IS OVER.

Contour Map of the Mediterranean Lands

Scale, 64 miles to 1 in. Size, 76 by 40 in. Covers all the Eurasian areas affected by the War. Extends from Petrograd (N.) to Red Sea (S.), British Isles and Canary Islands (W.) to Persian Gulf (E.). Both ancient and modern names are given, physical features are graphically shown in colour, so that it is useful for Classical, Scripture, or Modern Geography. PRICE 16s.

Contour Map of the Near and Middle East

Scale, 95 miles to 1 in. Size, 40 by 30 in. Extends from Rome (W.) to Kabul (E.), Astrakan (N.) to Gulf of Aden (S.). Ancient and modern names. Includes The Balkans, Asia Minor, Mesopotamia, and Egypt, and a large scale Inset Map of Palestine. Routes of Alexander the Great, Pompey, and St. Paul are shown. Unrivalled for teaching Scripture Geography. PRICE 7s. 6d.

Contour Map of the Seine and Rhine Basins

Scale, 16 miles to 1 in. Size, 30 by 40 in. A Wall Map specially prepared for Schools to illustrate military operations in the Western War Area. Extends from Kiel (N.) to Lake Geneva (S.), London (W.) to Lake Constance (E.). Principal Railways, Canals, and Steamship Routes shown. PRICE 7s. 6d.

These may be had mounted on cloth, rollers, and varnished ; or cloth, out-to-fold, with metal eyelets, at prices quoted.

Full particulars of above, and of our other new publications, sent on receipt of a post card.

Fourth Class.—Laurence, Sarmia, D. Dunbar, A. Tickey, K.H.B., Télémaque, Pangloss, Ann, M.Q., Anzac, Arishmell, A. Fry, Leander Corncrake, Goldsmith, Mayfield, Boetius, Pen, Eugène, A.B., Brenda.

Fifth Class.—Undine, Victor, V.H., Summer, Lar, Phil, Poilu, Lips, Aura, Once More, Par, G.G., Rub, H.F., Herga, Girlie, Mona, D.M.

The letter of Victor Hugo to Louis Boulanger was in one respect an unfair test, as it involved a knowledge of Antwerp not easy to be "got up" without consulting guide-books difficult to procure in these hard times. Not to recognize the *Tête de Flandre*, the fort and village of S. Anne on the further side of the Scheldt, was a venial error, but it is obvious that all the names must be anglicized. But the difficulty for which the passage was set was to turn a long epistolary paragraph of some forty lines into literary English: to steer between the stilted guide-book and the style of Mr. Jingle. An English writer would certainly not content himself with commas and semi-colons.

C'est tout vous dire: "and to you I need say nothing more." His friend knows Antwerp. *A même* was generally slurred or mis-rendered. It is the familiar *boire à même les bouteilles*: "in the very centre of cathedrals," &c. "I was on the top of the spire," &c., for "I climbed," is absurd. *Une chose contient*: "I see something which makes a picture or presents a new idea." *Polders*, recognized by English dictionaries, should, of course, be retained. *Une prairie*: "a piece of meadowland five leagues round." *Une autre prairie*: "another meadow, but this one green, and dotted with houses of dazzling white." *Comme était Paris*: "a sixteenth-century Paris surviving to the present times." Only a few were caught by *hôtel*, "mansions." *Accidents de tourelles*: "un-

expected turrets." *Amusantes*: "quaint." *Qui sont*: "here the guildhall of the Fleshers, there of the Drapers, and there the Exchange," or a simple dash would suffice. *Fond de Rubens*: "a background in a Rubens, and actually designed by Rubens." *Une grande étoile*: "a star-shaped green which looked as if it had been laid on level, marked the site of the citadel." *Enfin au-dessus*: "and over all the landscape was a sky of ragged clouds, with a gleam of falling rain in the distance."

AN OMNIUM GATHERUM PAPER.

Prizes to the amount of Two Guineas are offered for the best answers.

1. Identify, with brief comments, the following quotations:—
 - (a) "The grand old fortifying classical curriculum."
 - (b) "What is a Communist? One who has yearnings For equal divisions of unequal earnings. Idler or burglar or both, he is willing To fork out his penny and pocket your shilling."
 - (c) "The dissent of dissidence."
 - (d) "Perverse studet qui examinibus studet."
 - (e) "We must leave no Giotto by the sheepfolds."
 - (f) "Russian is far more difficult than Greek and far more useful."
 - (g) "The drilled dull lesson forced down word by word In my reluctant youth."
 - (h) "Que messieurs les assassins commencent."
 - (i) "An unmixed Democracy is an unmixed evil."
 - (j) "Best fight on well, for we taught him."
 - (k) "Shakespeare unlocked his heart."
2. Give, with derivation and meaning, six neologisms or new words that we owe to the present War.
3. An epigram in any language on Daylight Saving.
4. "Conscription": An article of 200 words or under for a new English Cyclopædia.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by June 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Posts Wanted.

Prepaid rate: 30 words, 2s.; each 10 words after, 6d. (Use of Office address, 1s. extra.) For latest time for receiving these announcements see front page.

Posts Vacant—continued.**ADMINISTRATIVE COUNTY OF
LONDON.****THE LONDON COUNTY**

COUNCIL invites applications for the position of ASSISTANT EXAMINERS in connexion with the award of the Council's Junior County Scholarships. The general Examination will be held on 4th November, 1916, and the alternative Examination on 1st December, 1916. The preliminary work of Assistant Examiners is to be completed by 9th November, 1916. Assistant Examiners will work under the general direction of a Chief Examiner; they will be required to mark the candidates' answers, to attend Examiners' meetings, and to make a report on the work of the candidates they examine. They will not be required to set the questions. The examination is of an elementary character, consisting of two 1½-hour papers—one in arithmetic and one in English—worked by boys and girls between ten and eleven years of age. The fee payable is 50 guineas inclusive for persons who are able to devote their whole time to the work for the necessary period, and 25 guineas inclusive for persons appointed as "part-time" Assistant Examiners.

A whole-time Examiner will, as a rule, be required to mark the papers (Arithmetic and English) of about 1,200 candidates, and half-time Examiners the papers of about half this number.

Examiners must not be closely related to, or directly benefited by, the success of any candidate taking the examination. Examiners will have no claim upon the Council either for work or payment in the event of its being found that their services are not required. Teachers engaged in London Elementary Schools are ineligible.

Applications must be on forms to be obtained by sending a stamped addressed foolscap envelope to the EDUCATION OFFICER, London County Council, Education Offices, Victoria Embankment, W.C., to whom they must be returned by 11 a.m. on Saturday, 10th June, 1916. Every communication must be marked "G" on the envelope.

Canvassing, either directly or indirectly, will disqualify an applicant.

JAMES BIRD,

Clerk of the London County Council.

Education Offices, Victoria Embankment, W.C.

THE THREE-YEAR COURSE IN A SECONDARY SCHOOL: A PARTIAL SOLUTION.

By PROF. W. PHILLIPS.

THE question of providing a three-year course in a secondary school that will be profitable for those pupils who leave at the end of that period, and suitable for the others who stay on in order to prepare for a school-leaving or matriculation examination, is in itself very important, and becomes increasingly so when we come to consider the wisdom or otherwise of instituting higher elementary schools, also to provide three-year courses. Further, more, the question bears directly on some of the suggestions regarding subjects of study contained in the Board of Education Circular 849 on Examinations in Secondary Schools, which seems already to have influenced the new regulations for Local Examinations issued by the Universities of Oxford and Cambridge.

Mr. Owen Owen, the late Chief Inspector to the Central Welsh Board for Intermediate Education, devoted a large portion of his final report (November 1915) to the consideration of the course of instruction in the intermediate schools. Needless to say, it contains suggestions of the highest importance, especially concerning the question now under consideration.

In view of the fact [Mr. Owen writes] that a school period of eight years is recognized for the purpose of the Parliamentary grant to Secondary Schools, it should be assumed that a normal course of instruction extending over a period of not less than six years should be provided, and it may be observed that provision is made for such a course of instruction in the Welsh Schools. The normal course leading up to the Senior Certificate Examination extends over a period of not less than four years, and under the Regulations of the Board the post-senior course leading up to the Honours Certificate Examination extends over a period of two years.

He points out that a scheme for the amalgamation of the Higher and Honours stages has been recently suggested, which provides for one post-senior examination instead of two. But, as Mr. Owen goes on to indicate:

The proposals which deal with the post-senior course should be considered in their relations to the entire course of instruction. In considering a complete course it would be well to arrange definitely for (1) a three years' course leading up to the Junior Examination, and (2) a further three years' course leading up to the new Higher Certificate Examination. . . .

Although the average length of the period during which pupils remain at school is gradually improving, it must be observed that a considerable number of pupils are withdrawn from school within the first three years. The problem is to organize the course leading up to the Junior Examination in such a way as to serve the double purpose of providing the best possible training for those pupils who will not remain in school beyond the second or third year, and also for those pupils who will remain in school for the entire course. In view of economy and efficiency it is important that the double object should be attained by means of one and the same course.

There cannot, I imagine, be any doubt as to the reasonableness of Mr. Owen's advice. What, then, is the main cause which makes it difficult for the secondary schools in Wales, as elsewhere, to provide a course of study that will be profitable for those who mean to stay at school only for three years, or, wishing to do so, fail to make sufficient progress to justify parents in retaining them there, as well as for the clever or better-circumstanced pupils who, at the outset, decide upon a school course of at least four years in length? It may, with some confidence, be said that it lies in the nature of some of the subjects taught in these schools, especially in two or three subjects to which, perhaps, unduly great importance is still attached by many leaders of educational opinion.

The number of subjects recognized by the various Boards, such as the Central Welsh Board and the Oxford and Cam-

bridge Boards, as suitable to be taught in secondary schools is very large, and wide liberty is permitted to individual schools in making a choice among them. For instance, in the Regulations for the Oxford Local Examinations to be held in 1917 and 1918, there are twenty-four main subjects in which senior candidates may be examined; these are arranged in four divisions—viz., English subjects, Languages, Science and Mathematics, Other Subjects. Before a certificate is granted a candidate must pass in English, one language, and a subject taken from the group of Science and Mathematics. Now, so far as many of these subjects are concerned, it is easy to prepare a scheme of work which can be completed in three years, and be, *at that point*, as valuable for the pupil who then leaves school as for the one who proceeds to a further course of instruction. Among such subjects may be mentioned Scripture knowledge, English language and literature, history, arithmetic, Welsh (for the Welsh child or for one who has had previous instruction in that language), elementary science, elementary biology, geography, shorthand, music, drawing, hygiene, laundry work, &c. But what about an ancient language, like Latin or Greek; algebra and theoretical geometry; a modern foreign language like French; or a science like chemistry?

If a parent, at the time of entering his child at a secondary school, states that he wishes him to be prepared for a Senior Examination, and to take in that examination subjects which will be accepted by a University as equivalent to the Matriculation Examination, then the head teacher provides instruction to this pupil almost from the beginning in mathematics and very often in Latin. If the parent is, as is often the case, undecided concerning the period for which he intends maintaining the child at school, or as to the trade or profession he wishes him to follow on leaving it, the head teacher finds himself in a difficult position. If he assumes that the pupil will leave at the end of the third year, he can omit Latin and mathematics from the pupil's scheme of study. Should this assumption subsequently turn out incorrect, and the pupil wish to stay on to take the Matriculation Examination, the situation becomes serious. How to teach sufficient Latin and mathematics to a pupil of no more than average ability in one or two years, so as to enable him to pass the examination just named? It is very difficult to do this. Is there a way out? Shall we, in order to be sure that the clever pupil may not find his way to the University blocked, teach Latin and mathematics to all; or shall we, in order to secure the greatest good for the greatest number, omit these two subjects from the earlier part of everyone's course, and concentrate attention on the topics for which a strong three-year scheme can be prepared?

I assume that it is impossible to prepare a three-year course in Latin that will be profitable as another of similar length, say, in English or history or geography or drawing. I do not, however, hold that this is of necessity true with regard to mathematics. I would, nevertheless, maintain that much of the algebra and theoretical geometry contained in the syllabus for the Junior Examinations, *if not carried further*, is of little advantage to anybody. Indeed, I would say the same (with the reservation just made) about the parts of these subjects required for the Senior Matriculation Examinations. Fortunately, these mathematical syllabuses can easily be made more practical, as has already been done in more than one type of post-elementary school. We can consequently assume that it is quite practicable to draw up a scheme of work in mathematics which will be profitable for the pupil leaving at the end of the third year, and which can then, in a logical way, be extended for those staying on at school for one or more years, and be at the same time a useful foundation for University courses in mathematics. It may be, however, that the latter would have, to some extent, to be redrafted. After all, the scheme of instruction in the secondary schools is intended for very many pupils who do not intend going on to a higher place of learning. However, there is good reason to believe the ultimate effect on University as well as school of making mathematical teaching more practical would be beneficial. I may be

allowed to add one more remark on the teaching of algebra and theoretical geometry in the secondary schools—namely, that, although I should deplore any serious reduction in the number of pupils taking mathematics (of a practical kind), I fail to find any sufficient reason for closing and barring the doors of a University in the face of a candidate simply because he or she has not studied that one subject. This is a special hardship for girls.

I have still to consider the question whether it is possible to prepare such a three-year course of study in a foreign language or in a science (such as chemistry or botany or agriculture) as will justify us in entering a child upon it, although we were at the outset sure that he or she would not carry it further in school or University. I must confess that I find it difficult to answer this. I am, however, inclined to say that a three-year course in French or German does not ordinarily produce results as definite and beneficial as can be got from giving the time bestowed on one of them to a more intensive study of English literature or to drawing or music or (say, for girls) cookery. (It must be remembered that the inclusion of French or German means the exclusion of another subject, and sometimes it is an important one like those just mentioned which is omitted.) I should feel less hesitation about including a foreign language if I knew it was taught in an intensive fashion by the conversational method. But, whether it were introduced into the curriculum or not, if such subjects as English literature, history, arithmetic, elementary science or elementary biology, or both, geography, music, drawing, and one or two domestic subjects for girls were well taught, one could confidently assert that the foundations of a liberal education were being laid. Concerning the place to be given in a three-year course to a science, I shall content myself with stating briefly that I think it is fairly easy to prepare a scheme and make the scientific instruction so practical as to be of considerable benefit to the majority.

It is, I believe, generally admitted that the difficulty experienced by secondary schools in arranging definitely for a three-year course for those who do not intend or are unfit to stay or to take a School-leaving or Matriculation Examination led to the institution of the higher elementary school. On the whole, secondary schools had until recently failed to make this kind of provision. This was due partly to traditional considerations, but chiefly to the fact that their curriculum must in some essential respects be determined by University requirements. Many secondary schools still feel themselves placed in the invidious position of failing *either* to prepare their abler pupils for University work *or* to make suitable provision for the large number who leave school before coming within sight of an examination equivalent to matriculation.

Let us for a moment consider those marks that are said to characterize a higher elementary school. They are noted in Chapter VI of the *Elementary School Code*. We shall at present concern ourselves with two of them—namely, the length of the course they are intended to provide and the nature of their curriculum. Concerning the first, it is stipulated (see Article 38b) that "the school must be organized to give a three years' course of instruction." In certain exceptional cases, pupils may remain for a further year. As to the second point, it is laid down (see Article 38d) that "the curriculum must have for its object the development of the education given in the ordinary public elementary school and the provision of special instruction bearing on the future occupations of the scholars, whether boys or girls. A curriculum will not be approved unless it provides, together with this special instruction, a progressive course of study in the English language and literature, in elementary mathematics, and in history and geography. Drawing and manual work for boys, and domestic subjects for girls must be included in every case as part of the general or special instruction."

It will be noted that the Board of Education makes a demand that the higher elementary school shall supply special instruction bearing on the future occupations of the scholars, whether boys or girls. This is more definite than the recom-

mentation on this point made by the Consultative Committee upon Higher Elementary Schools in its report published in 1906. It may be thought by some that such a vocational demand as this could not be made upon secondary schools. The answer is that many secondary schools are already meeting it. The Central Welsh Board, for instance, holds examinations for commercial and technical certificates, and subjects bearing upon the future occupations of the scholars are included in its General Regulations and Examination Schedules. There is here, then, no clear line of difference between the two types of schools we are considering.

Both the Consultative Committee and the Board of Education consider Latin as quite outside the purview of the higher elementary course; it is not discussed by the former or included by the latter in Article 38*d* quoted above. Elementary mathematics must, however, be taught, but the Committee wished that the instruction in that subject should be as practical as possible. No foreign language is considered an essential part of the curriculum. That does not mean it cannot be introduced into certain schools. Furthermore, the Committee recommended that "the scientific part of the curriculum should include instruction in elementary natural science," but not necessarily in the form of chemistry or physics. The subject is, however, not expressly included in or excluded from the list given in Article 38*d*.

The curriculum suggested by this Committee and the Board of Education for a three-year course in higher elementary schools has obviously much to recommend it, and at many of these institutions excellent work is being done. But, unfortunately, no provision is made by which able pupils may continue their studies up to the matriculation stage; they are thus cut off from a University training unless they are transferred to another school. In this respect the higher elementary school is a *cul de sac*. It must further be remembered that the Board of Education have declared that the preparation of scholars in such a school for an outside examination, unless it be of a technical character and for admission to some local trade or industry, is inconsistent with the object of that institution. (Letter to the L.C.C., June 1908.)

In the failure, therefore, of many of our secondary schools to make the right kind of provision for those who do not stay in them for more than three years, and in the fact that our higher elementary schools are not permitted to prepare for a matriculation examination, lie two important problems that await solution. I suggest the following:—

(1) Let the list of *compulsory* subjects in the various matriculation examinations be reduced: in particular, Latin and mathematics should no longer be demanded except from those candidates who purpose studying these subjects, or others in which a knowledge of them is essential, at the University.

(2) Let all secondary schools provide a three-year course on lines similar to those indicated above; this will be comparatively easy when the requirements for admission to the various Universities are made not less high, but less narrow. The senior and post-senior courses could still be retained in full vigour.

(3) Let the County Authorities cease building higher elementary schools. There will be no need for special schools to provide three-year courses if the secondary schools arrange to do the work, and, if they do, we shall not in future see able pupils hampered in the prosecution of a full matriculation course of study by the fact that they proceeded to a higher elementary instead of to a secondary school.

TEACHERS' REGISTRATION COUNCIL. THE PROGRESS OF THE REGISTER.

THE work of the Teachers' Registration Council has been hampered by the War, but certain progress has been made towards the building up of a comprehensive Register of qualified teachers. A summary of the figures may be of interest. The Register was opened at the end of November 1913. During the first year there were 4,527 applications. The second year brought an addition of 7,981, making a total up to November 1915 of 12,508. Since the latter date—i.e. up to and including May 11—there have been received 5,124 applications, making a total of 17,632.

The arithmetical progression indicated in these totals is encouraging, but, when it is remembered that there are at least 120,000 teachers eligible for registration, it is evident that the Council has a heavy task to accomplish before it can claim to have secured the unification of the teaching profession.

The analysis of applications received is as follows:—

ANALYSIS OF APPLICATIONS.			
GROUPS.	MEN.	WOMEN.	TOTALS.
University	203	25	228
Elementary:			
Heads	1,116	1,938	9,412
Assistants	1,613	4,745

Blind	11	20	31
Training of Tea- chers	104	187	291
Private Teachers ...	7	12	19
			17,632

It will be seen that the members of the Council, each of whom is elected as the representative of an association of teachers, have constituencies of widely different sizes, but it should be added that some associations have registered practically all their members. Their policy might be adopted with advantage by all the associations, since it is difficult for the Council to approach teachers directly without the risk of seeming to push its wares. On the other hand, a certain amount of advertisement and publicity seems to be required, for quite recently a teacher, when questioned, said that the Registration Council had something to do with keeping school registers! As an example of what can be done by the efforts of a group of teachers, it may be mentioned that the London Teachers' Association has carried out a scheme for registering its members, with the result that over 2,500 applied and were accepted. In view of the fact that the Registration Council was formed at the express wish of teachers acting through their associations, it is not too much to say that these associations are virtually pledged to support the Council by urging their members to become registered. Resolutions passed by conferences and annual meetings are of little service unless they are followed by systematic effort.

The formation of a comprehensive Register is the chief task of the Council, but other important duties have been undertaken. At the request of the Board of Education a report has been prepared on the Draft Introduction to the forthcoming new edition of the *Suggestions to Teachers*. Returns were obtained also from Local Education Authori-

ties which enabled the Council to issue a statement on the practice of retrenchment in education. A record is being prepared of teachers who have been killed or wounded or have received military distinction during the war. The first official Register is in the printer's hands, and it is hoped that it will be ready for publication in the course of the month.

Arising directly from the Council's work of framing a Register is the task of considering the examinations taken by teachers, particularly in what are called "specialist subjects." A number of committees have been formed to consider and report on the existing examinations. In this work the Council has secured the help of some of the most eminent teachers in the various branches concerned.

REVIEWS AND MINOR NOTICES.

Anthropomorphism and Science. A Study of the Development of Ejective Cognition in the Individual and the Race. By OLIVE A. WHEELER, M.Sc. (5s. *Allen & Unwin*.)

It is hardly too much to say that if anyone who had studied philosophy twenty years ago, having dropped it in the interval, were curious to know where it had got to at the present date, he could not do better than read Miss Wheeler's present volume. Her essay, which is the result of her work as a Research Fellow of the University of Wales, is described by herself as "a study of the development of ejective cognition in the individual and the race," and less accurately by the publisher's boy as "a study of genetic psychology, conducted with a view to solving the problem of the relation that exists between the theological and scientific interpretations of the world." We are further told by the latter that "the work should appeal to all those who are interested in the problem of the apparent opposition between the auxiliary concepts of Science and Theology." So it does appeal, but if it were a study in genetic psychology only, it could hardly have that interest. According to Aristotle, the essence of a thing is what it is when its genesis is complete. And it is with our complete modern consciousness (at least, as far as it has got towards completeness) that Miss Wheeler mainly deals.

But what, our philosophical Rip van Winkle might ask, is this new slang of "ejective cognition"? What new observations or hypotheses justify such an addition to our

vocabulary? for nothing else can justify it. Miss Wheeler's book gives us the answer. The term was originally Clifford's, and he explains that "the inferred existence of *your* feelings, of objective groupings of them similar to those among *my* feelings, and of a subjective order in many respects analogous to my own—these inferred existences are in the very act of inference *thrown out* of my consciousness, recognized as outside of it, as not being a part of me."

In ordinary language, I "read" my own conscious experience into another than myself. And Miss Wheeler gives sufficient reason for using the word of Clifford's coinage in preference to the more obvious term "projection," because the latter has a separate and distinct function of the mind to express—namely, the construction of sense impressions into objects. Now one science, that of psychology, is wholly and entirely "ejective." It all rests on the inference, so plain to common sense and yet so difficult to prove logically, that there are other minds similar to my own. Miss Wheeler's task has been to discover how far this "ejective" element exists in the other sciences, which are generally considered by their professors to be wholly free from anthropomorphism. Her conclusion is that the mechanical sciences, though they "transcend" in some respects the data which they co-ordinate, yet are free from any ejective element; but all the rest, from physics and chemistry up to biology and theological philosophy (if that is to be classed as a science), are ejective in an ascending degree. Her examination of these respective branches of science is, perhaps, the most interesting and important part of the book. It is, perhaps, strange that it has not been usually noticed how anthropomorphic—nay, in some cases, how mythical (witness the description of matter as "a dark, inert, rigid, and absolutely passive substance")—are the terms of these sciences. "Force" or "energy," both of them highly anthropomorphic concepts, are the chief currency of the modern physicist. The chemist, who would repudiate Empedocles' description of atoms as having love and hatred for one another, yet speaks of their "affinity," more in the sense of exercising a mutual attraction than of likeness. What can this term denote if not

The desire of the moth for the star,
Of the day for the morrow?

It is, in short, either ejective or meaningless.

Biology, Miss Wheeler thinks, is establishing a valid claim to be autonomous—i.e. not resolvable into physical and chemical categories. In this department she derives much support from M. Bergson, a debt which, as she acknowledges in her preface, is more especially due to his personal supervision of her studies. Indeed, she has very happily absorbed the more certainly established conclusions of the Bergsonian philosophy. Perhaps the conclusion of which she makes best use is that the conception of cause as power issues from the inner mental life, while that of cause as necessary connexion can only apply to the world of spatial relations, where alone identical causes can be found. Now just as we often attribute power to external things by a process of ejection, so also we are apt to look for necessary connexion in our mental states, which we regard as though spatially distinct by the converse process to which Miss Wheeler prefers to apply the term "introlation." These processes, naturally, are equally valid or invalid. "If ejection is a device for gaining a synthetic view, introlation is also a device for obtaining an analytic view." Miss Wheeler, though she quotes Wordsworth's "Daffodils," does not observe that the poet employs *both* processes. He not only personifies Nature (as also does every man of science in his more eloquent moments), but he also illustrates himself by natural similitudes, both processes perhaps having more literal truth than he usually supposes. Anyhow, both processes are decidedly relative—they are limited, that is to say, to the particular object in view. Here is, perhaps, the point where our Rip van Winkle will feel himself again at home. Perhaps it is characteristic of modern tendencies that Miss Wheeler has no reference to Hegel, though many to Kant. But, surely, here comes in the need for and justifica-

tion of the Hegelian dialectic. Neither of our alternative explanations of the Universe—the mechanistic and the anthropomorphic—is absolute; it represents only one aspect of the whole.

What, then, is Miss Wheeler's solution, or what has she contributed towards a solution of "the problem of the relation that exists between the theological and scientific interpretations of the world"? She has first stated the problem clearly and in the light of the history of philosophy; she has then justified logically the method of analogy by which thought of an ejective nature proceeds. (This section, perhaps, contains some weakness. To criticize it would take more space, but we would suggest to the reader to consider carefully the formal argument on page 93, with its assumption that infinity = certainty. Does it not rather represent indeterminateness?) She has then shown us genetically the history of ejective thought, from the savage, who interprets all Nature, organic and inorganic alike, "animistically," as though endowed with a mind and consciousness like his own—in some cases might we not say "higher than his own," otherwise how can we explain the passage from mere totemism to the actual worship of animals?—to our own attempts to interpret the consciousness of animals and the life of plants. She is even ambitious to be able to enter into these latter with something near exactitude by abstracting certain elements of our own consciousness—perhaps an over-ambitious project, for is not Bergson right in holding that mental states are interpenetrative? From this it follows that abstraction is even more difficult in the mental than in the external worlds. The union of A, the vegetative, in us with B, the conscious, and C, the self-conscious, may result not in A B C, but in A^c B^c C. It is all coloured with self-consciousness, and students of educational psychology are aware of the similar difficulty, which some consider an impossibility, of detaching "faculties." But to return. The ejection of the modern intelligence is discriminate. It sees in the attraction of the iron for the magnet something anthropomorphic—a force, but a third force. In animals it sees a real purpose—the anticipation of an end, but not a consciously apprehended end.

The whole Universe, in the same way, may be interpreted teleologically as embodying purpose, so far as it can be regarded as a real whole—not a chance conglomeration of things like a slag-heap. What remains beyond Miss Wheeler's inquiry is the detailed examination of the ejective process in theology. It will present this puzzle: that the religious consciousness creates rather than finds its values, and assigns them to things in virtue not only of their relation to the world of known things, but of a more comprehensive scheme of reality which it seems to grasp intuitively, for the other-worldly element in religion undoubtedly predominates. Possibly it also does so in art.

In conclusion, by way of apology for this lengthy account of a book which must be read to be appreciated (for its value lies largely in its details of illustration and proof), it may be added that a distinguished English philosopher said recently to the present writer: "Philosophy is really going ahead now. People have ceased to sit and criticize each other." Nothing could better show the truth of his remark than the present work, which incidentally justifies fully the practice of awarding Research Fellowships in Philosophy.

William Pitt and the Great War. By J. HOLLAND ROSE, Litt.D. (7s. 6d. G. Bell.)

This volume, the companion of that on *Pitt and National Revival*, reviewed in our March issue, has received the same generous treatment, reappearing in a cheaper, though unabridged, form. It continues the record of Pitt's work for England from the gathering of the storm of war with France to his death, and, marked by the same exhaustive research and firm grasp of European politics as its predecessor, is an invaluable guide in many difficult places. It is not a history of military or naval exploits. Readers would consult it in vain for any accounts even of the most famous engagements, but it does deal, to some extent, with strategy, and

fully with the effect of battles on the progress of the war, with the diplomacy of Europe, and, above all, with the policy of Pitt, both in the direction of home affairs and as a War Minister. Here, too, as in the earlier of these volumes, we have such notices of his private life as can be gathered, and if they are few, that is because his life was wholly given to England. Broadly his work may be divided into his guidance of the nation in its struggle with a foreign foe and his efforts to force it to employ its full strength in that struggle, unsapped by sedition and unfettered by party or personal considerations.

In his first chapter, Dr. Holland Rose reviews the signs and causes of political discontent in England before the French declaration of war and Pitt's relation to them. He considers that discontent might, to some extent, have been prevented if Pitt had redressed obvious grievances by the repeal of the Test and Corporation Acts and a reform of Parliamentary representation. Unfortunately, he did not feel that his position was strong enough to provoke the ill-will of the Church, and so provided political dissenters with a grievance which may have strengthened their sympathy with the French revolutionary movement. That he acted mistakenly in discountenancing Parliamentary reform in 1790 is Dr. Rose's opinion, expressed moderately, and after taking count of his reason for doing so. Reform, however, was a far more disturbing question than would be gathered from this book, and it is possible that it was prudent not to raise it at that time, especially as the assertion that the interest of the nation in it was awaking seems fairly disputable. His refusal gave the Radicals another and more powerful battle cry against the Government. Clubs were formed, and some of them allied themselves closely with the Jacobins' Club and, inspired by Paine's *Rights of Man*, propagated doctrines subversive of society. Their seditious character caused widespread alarm and provoked the anger of the well-to-do classes. Later we are told how, while the country was at war, Radicals, though borrowing the watchword of reform, were in the main Republicans. Unanimity and peace at home were, and always must be, a prime necessity in time of war, and Pitt, with deep regret, found himself forced to enter on a policy of repression. Arrests were followed by trials which, in Scotland especially, were too often conducted unfairly, and sentences were pronounced which seem vindictive. Sympathy was aroused on behalf of the accused, and juries refused to convict. The attempt to organize a National Convention is justly held to have "threatened developments which might easily have become dangerous," and, to prevent that, Pitt took the safe course by stopping them at the outset by the suspension of Habeas Corpus. So far we agree with Dr. Rose, but we are taken aback by a remark that, in preference to earlier steps of repression, he should have trusted the loyalty of the mass of the nation to overbear the Jacobinical minority, and again, in the same connexion, that the majority was armed while the minority, though including desperate men, had but small stores of pikes. He cannot surely think that Pitt should have preferred to risk an outbreak of civil violence rather than repress sedition by criminal process. For the abuse of legal procedure Pitt was, as is observed here, only remotely responsible. With the unpatriotic efforts of the Opposition in Parliament to embarrass the Government, Dr. Rose has no sympathy, and he speaks with scorn of Fox's efforts to justify the French Jacobins alike before the war and during its course.

Towards France, Pitt and Grenville maintained, as long as it was possible, an attitude of strict neutrality; nor did any sign of friction arise until the proclamation against seditious writings, which, though an absolutely national matter, Chauvelin complained of as falsely attributing to France, then invading the Belgic provinces of Austria, a desire for conquest. Clearly and forcibly, Dr. Rose points out that the execution of Louis XVI was "in no sense the cause of the war"; that the war was forced upon Pitt by the aggressive decree against the sovereignty of Holland, "backed up, as it was, by the claim to support malcontents

in any land." International Law was violated and the doctrine of the "scrap of paper" was anticipated by the action of France as regards the Scheldt. England's security would be endangered by French domination over Holland, and even over the Belgic provinces. Security for herself was the object for which she fought under Pitt's guidance and later. The inherent weakness of the first Coalition against France is well pointed out. Each of the Allies sought its own ends, and Pitt's hopes were frustrated by the failure of Austria to help the common cause at critical moments and by the treachery of Berlin. So, too, selfishness and jealousy caused the failure of the second Coalition of 1799, from which Prussia stood aloof. Austria, in spite of British subsidies, withdrew the forces which should have ensured the success of the Russian campaign in Switzerland, and so ruined the plan of striking at Franche Comté during the absence of Bonaparte's army in Egypt. The Coalition broke up within a year, and was followed by a breach between England and Russia.

On the accusations brought against Pitt of wasting England's strength in operations of secondary importance, Dr. Rose has some well considered remarks, showing that, while it is certainly true that he attempted too much at once, each effort is in itself capable of defence, but that, unfortunately, owing to the conduct of her allies, England was called upon to take a far greater part in the Continental War, necessary for the attainment of her main object, than in the time of Pitt's father, who had used her forces in the conquest of the French colonies and in expeditions not always successful against the coasts of the enemy, while the main burden of the Continental War was borne by her ally. The call on her resources in men made by Pitt's minor expeditions was especially disastrous owing to the "piecemeal methods" of English recruiting, explained here and contrasted with Carnot's *levée en masse*, which opened the way for Bonaparte's victories.

The chapters on the Irish Rebellion and the Union are written in a spirit of fairness. As to the means taken to carry the Union in Ireland, we read that "these sordid bargainings cannot be said to amount to wholesale corruption," and Pitt's insistence on the immediate need of the measure in the face of the probability of invasion is shown to be fully justified. We note with interest that Dr. Rose discredits the story that Pitt spoke bitterly of Grenville's refusal to join his second administration on the ground that the alleged words were not such as so tolerant a man would have used in the circumstances. Arguments of that kind, however, are weak in themselves. Lord Eldon's authority is not despicable, and, with regard to Pitt's disposition, it may be urged that, as Dr. Rose notes in another place, he had some of the characteristics of the Grenvilles, his mother's family. "That proud man" had tried Pitt sorely by adopting a course, probably from more motives than one, disastrous alike to him and to the country. The end of the single-hearted Minister, whose dying thoughts dwelt on the hope that Prussia, though faithless before, would stand firm and send reinforcements to the British troops in Hanover, is told with pathos and dignity. It is pleasant to be able to say that Dr. Rose's two volumes on William Pitt seem to us to be not unworthy of the greatness of their subject.

The Book of Matriculations and Degrees. A Catalogue of those who have Matriculated or been admitted to any Degree in the University of Cambridge from 1544 to 1659. Compiled by JOHN VENN, Sc.D., President of Gonville and Caius College, and J. A. VENN, M.A., Trinity College. (£2. 5s. net. Cambridge University Press.)

The compilers of this important work point out that there should be three records of an undergraduate's name on admission—one in the College register, a second with the Registry on matriculation, and a third in the Matriculation books. On graduation as B.A. there should be a "supplicat" for each student from his College, a grace of the Senate for con-

ferring the degree, the publication of the lists, and the graduate's own signature to the "Three Articles." With similar records for higher degrees and fellowships, if all these records were complete, there might be as many as twenty records of a single name. But not only are many of these sources of information often lacking, but the varied spellings and mistakes present difficulties even in those which are extant. Thus, by careful collation and inference, it has been discovered by the compilers that "Dickinson" should be Pilkington; "Depys," Pepys; "Wiske," Withe; "Ledrich," Redrich, &c. They have identified Saundersburie with Sandsome; Battiston with Saltiston; Vewtibhat with Lewthwait; Queadman with Redman. Shortened forms of Christian names lead to the confusion of George and Gregory, Laurence and Lancelot.

The College Admission registers, which have already been edited, include the excellent work of Dr. Venn himself in his biographical edition of the Gonville and Caius College records; that of the late Prof. J. E. B. Mayor and Mr. R. F. Scott, of St. John's College; that of the late Dr. John Peile, of Christ's College; and that of Dr. T. A. Walker, of Peterhouse. These registers begin 1560, 1630, 1622, 1617 respectively, and thus none is available for the present volume from the beginning, in 1544. Trinity College register is in process of publication, edited by Mr. W. W. R. Ball and Mr. J. A. Venn, but it only starts from 1635, and the editors are dealing with the later years first. Other colleges have MS. registers, and all extant have been consulted for the present work. Besides the college registers, previous lists of graduates exist, particularly that of William Richardson, Master of Emmanuel 1736-1775, and that of Romilly (about the middle of the nineteenth century), both in MSS., and the printed lists of *Graduati*.

The task of the present compilers in collating all the registers and in correcting so many errors so as to place the whole course of each graduate in its chronological order, must have been extremely arduous. They add "many thousands of names" of Cambridge graduates hitherto unrecorded in print, and "lay several hundred phantom graduates who have haunted the catalogues of Richardson and Romilly." Questions such as that of the residence of Thomas Gresham at Cambridge cannot here be settled for us, because that is earlier than 1544. We look in vain for an entry as to Rudolph Zuinglius, grandson of the great Swiss reformer, who is reputed to have been admitted to St. John's College in 1571. On the other hand, when C. H. and T. Cooper, in *Athenae Cantabrigienses*, say of William Johnson, Dean of Kilkenny, 1559-1581, that he was educated at Cambridge, "but in which College we cannot ascertain: if he took a degree no record thereof is now discoverable," the future Dean might prove to be the William Johnson, of King's College, who matriculated 1551 and proceeded B.A. 1555-6—whose course is stated in the Messrs. Venn's book. In fact, every doubtful or vague reference in the *Dictionary of National Biography* (or elsewhere) to the dates of Cambridge men, should be tested by the records of this new book. It is a work of indefatigable industry which will continue to be of reference value for generations to come; nor is it likely that it will ever be superseded for the period 1544-1659. It would be valuable to supply slips containing notes of any inaccuracies discovered, to be inserted, say, every five years.

Gateways to Bookland. In 5 vols. (10d. to 1s. 7d. McDougall's Educational Co.)

This new series of Readers for young people is distinguished by its clear print and admirable illustrations. Perhaps the first two volumes will be the best appreciated, for the infants have been the most neglected. The stories are all old, but they have been retold so as to bring them within the comprehension of the youngest. The coloured frontispiece of Reynolds's "Fortune-teller" will captivate beginners, as will Gordon Browne's illustrations of "Rushy-coat." We cannot, however, approve the variants on the old nursery rhyme as "ungrateful chit" for "bold-faced jig."

In the second volume are longer stories, such as *The*

White Cat and *The Three Bears*, but we doubt whether children will appreciate the prose version of Macaulay's *Lays*. Children of eight, to our knowledge, have of their own accord not only read, but learnt by heart, Horatius.

Of the third volume there is less to be said. We have numerous adaptations from Malory, Hawthorne's *Wonder Book*, Lytton's *Last Days of Pompeii*, and Marryat's *Masterman Ready* and Hauff's *Caliph Stork*. To Chaucer's *Cock and the Fox*, Coleridge's *Ancient Mariner*, and *Alice in Wonderland* we take the same objection. Better to leave these masterpieces till children can read the originals or the full versions.

The fourth volume, entitled *Vistas of Romance*, is much better, as it gives at much greater length two stories from Morris's *Earthly Paradise*, a chapter from *Ivanhoe*, and one from *The Mill on the Floss*. Its poetry is hardly up to the mark.

We know not why the last volume, *Within the Gates*, begins with a prose version of Leigh Hunt's *King Robert of Sicily*, nor why it should end with an abbreviation of George Sand's *Consuelo*—a fine novel, but not easily intelligible apart from the context. Evelyn's *Great Fire of London*, Kingsley's *Westward Ho!* and Charles Reade's *Cloister and the Hearth* are much better adapted for extracts. But the young reader should be told who is the hero of Reade's masterpiece. This volume, too, is abundantly illustrated by Gordon Browne.

Our Debt to France. An Address to the Sydney University Union on Friday, September 24, 1915, by the Hon. W. A. HOLMAN, M.L.A., Premier of New South Wales. (Sydney: William Applegate Gullick, Government Printer.)

No apology is needed for drawing the attention of readers in the mother country to this eloquent and suggestive address, which was delivered at Sydney in September last by the Hon. W. A. Holman, Premier of New South Wales and leader of the Labour party in that colony. All Englishmen are profoundly sensible of the immeasurable debt of gratitude under which France has laid them and the world by her heroic resistance to the common enemy. But Mr. Holman intends, by the title of his address, something more than this. His main thesis is that in the revolt now in progress against what he calls the pretence or superstition of German superiority—not merely in military and political affairs, but in all departments of human activity and thought—the leadership in the movement of liberation has rested almost wholly with France. It has become a commonplace in this country to say that France has lately "found her soul again." The chief interest of Mr. Holman's discourse lies in his reasoned exposition of what this means and how it has come about. He begins with a vivid description, based upon personal experience, of the feeling with regard to Germany universally prevalent in England in the early eighties of the last century—he was himself born in London, and went out to Australia in 1888—a feeling of the overwhelming supremacy of the German intellect, as manifested in arms and in diplomacy, in philosophy, in science, and in every branch of learned and systematic inquiry. This impression was to a large extent due to "the enormous moral and material effect of the great German victories of 1864, 1866, and 1870," and it was believed that Germany "was successful because her thinking was so accurate and profound." Thomas Carlyle, with his worship of force and of material success, used his unequalled influence to impose this estimate of Germany and things German upon his fellow-countrymen. We were not aware, however, that Carlyle ever went so far as to say that "there was no philosophy to be found anywhere outside the German Universities." Germany's success in war no doubt contributed powerfully to the prestige of the nation generally, but it would be a mistake, we think, to make too much of her military prowess as a cause of the belief in her intellectual pre-eminence. That pre-eminence in many things was unquestionable, and had been achieved before the Bismarckian era. So long ago as 1867, J. R. Seeley, speaking, one may suppose, in a strain of humorous exaggeration, said that, "as a

rule, good books are in German." Most people would probably admit that there was some truth in such a statement with regard to German literature and learning in the first sixty or seventy years of the nineteenth century.

In the latter part of his lecture Mr. Holman traces the steps by which the "spiritual supremacy" of France has in recent times been asserted or recovered. Summing up "the intellectual history of France during the nineteenth century," he shows how, at the beginning of that century, there was "a brilliant scientific period . . . when some of the giants of the European scientific world were to be found in Paris"; how there followed an interval of comparative barrenness, coincident with the period of the Second Empire, during which, "with the exception of the one great and unrivalled name of Pasteur, there was no one Frenchman whom one would describe as in the front rank of the scientific world"; and how, "from the later eighties onwards," there has been in France a wonderful intellectual revival, producing a succession of eminent mathematicians, physicists, chemists, and biologists, whose methods of investigation have been marked by a spirit of independence and originality peculiarly their own. In the sphere of abstract philosophy, M. Bergson, even if he does not lead his readers to "any very definite or satisfying conclusions," at least deserves honour for his resolute "determination to face every problem from a new point of view."

In his concluding pages, Mr. Holman, speaking of the present War, mentions two interesting facts which are not, we fancy, generally known—first, that the introduction into the French Army of "the celebrated quick-firing gun, which has been so extraordinarily an important factor in the War," was due to Colonel Picquart, who reorganized the French artillery when Minister of War; and, secondly, that, by studying Napoleon's strategy, the French staff of the present day discovered a new "method of manœuvring," which has been put in practice against Germany, and has proved highly successful.

Report of the Commissioner of Education for the Year ended June 30, 1914. 2 vols. (Bureau of Education, U.S.A.)

We have nothing in this country that quite corresponds to this book. The second volume resembles, to some extent, certain of our Blue books: it is taken up exclusively with statistics, and is almost entirely concerned with the domestic educational matters of the United States. The first volume, however, has a much wider range, and practically covers the educational affairs of the world. The articles are of a general character, and correspond in a way to the special reports that our Board of Education used to issue in happier days. There is this difference, however, that they are shorter, and have further been all written in such a way as to have a certain bearing on educational problems as they occur under American conditions. Most of the articles in this issue are of the usual kind, dealing with education as found in the various quarters of the globe. But several have a topical interest in view of recent happenings in the States. For example, there is an article on School Surveys. One who is familiar with the American educational journals of late is well aware that there has been an epidemic in the past year or two of these surveys, and that much heart searching has arisen in consequence. A survey is the work of a commission appointed to look into the educational affairs of a district. The first commission of this kind was appointed in Chicago in 1897, but the first State Commission is that appointed by Massachusetts in 1905. Nearly thirty such State surveys are summarily dealt with quite satisfactorily, but any one who knows the States will feel that all has not been said here about the working of this system. It is rather startling to English readers to find a chapter in a government publication devoted to Educational Associations. This does for the States what the Annual Conference-week Report tries to do for our English Associations, though of course the American notices are necessarily much briefer. There is a particularly interesting chapter on Progress in Vocational Education. The Montessori Movement in America gets a chapter to itself. Here as usual the Montessorians are fortunate in getting an enthusiastic recorder. The chapter on the Trend of Civic Education is suggestive, though it would not make popular reading in certain administrative quarters here. The chapter on the wider use of school plant would tend to mollify our reactionary authorities, but we would not advise them to go on to the chapter on Libraries; it might be bad for their hearts to read what ought to be done in this direction. All who are interested in

education ought to be grateful to the Commissioner and his contributors, and to the United States Government for the generosity with which it distributes its valuable publications.

Annual Report of the Smithsonian Institution for 1914.
(Washington: Government Printing Office.)

The Smithsonian Institution was established by Congress some seventy years ago, and one of its fundamental objects is "the increase of knowledge" interpreted in a wide sense. To illustrate this it may be mentioned that provision is made by the Institution for a system of meteorological observations for solving the problems of American storms; for exploration in descriptive natural history; and for geological, mathematical, and topographical surveys; for the solution of experimental problems, and the publication of the results; for statistical inquiries on physical, moral, and political subjects; and for historical and ethnological research. The work carried out under its auspices has been and is of the greatest value. It is interesting at the present time to note that the third Secretary of the Institution, the late Prof. Langley, whose name is so well known in connexion with his researches on the sun, was the first man to design and build a model aeroplane which could be successfully propelled by its own power, and this was as long ago as 1896. Two years later the construction of a larger man-carrying machine was begun, but it was not completed until 1903, and then, unfortunately, it was badly damaged in the act of being launched. Owing to lack of further financial aid, Langley was unable to proceed with his work, and he died four years later. In 1914 Mr. Curtis suggested that he would like to try this 1903 plane, and it was therefore repaired, provided with floats, and successful flights were carried out by Mr. Curtis as pilot over Lake Keuka. A most interesting article, illustrated with a number of photographs of the Langley aeroplane in flight, gives an account of this pioneer machine and its behaviour under test. In addition to the reports on the activities of the various sections of the Institution there is a valuable collection of papers covering a wide range of subjects, and providing the reader with the results of recent investigations in many directions. Many of these papers are beautifully illustrated, and the whole volume is full of interest.

The Carthaginian. By FRANK TAYLOR. (2s. 6d. net. Murray.)

There is an honest and fine spirit in Mr. Taylor's verse that, perhaps, strikes the reader more than any very marked dramatic gift or originality of metre. The play is concerned with Hannibal's closing years and his death in the kingdom of Bithynia. It is a fine theme, and the play is finely conceived; yet there is a bareness about it that gives one a sense that far more complexity should have gone to make up the final simplicity, if the figures are to live and move for us, and stir us deeply. Very occasionally, from a lack of skill in handling and sureness of touch, a tragic scene borders on comedy—e.g. when the Princess Lysandra retires into the house to give Hannibal time to drink the poison, and comes back with his armour for him to put on, the incident induces a smile when we should be at our gravest. Perhaps one of the most dramatic touches, though but slight, comes near the opening, when the old King asks Lysandra, anxiously, of his young son:

"But where is Prusias?"

Lysandra. "Chained to the soldier, hanging on his lips.
Thou knowest Prusias?"

We choose one passage to quote from the play—not that it is the best that could be picked from the book, but because it is typical and because some of the lines are curiously applicable to the present moment, though Mr. Taylor died in 1913. It is Lysandra speaking to those who wish the downfall of Hannibal:

"Though we be so small a state,
Nay, but because we are so small a state,
We are more jealous of our honour than
The proudest Empire; for when little states,
Which always are supposed to bow to fear,
Yield but one point of honour, they yield all.
Give Rome to-day thy captain of the host,
Give Rome to-day the guest who trusts thy faith,
To-morrow Rome will send to fetch thy Crown.
His doom will be the doom of thee and thine,
His shame will be thy shame, his agony
Thy people's; for the grave of Hannibal
Will be Bithynia's grave, and for them twain
This one, eternal epilogue will stand—
'So small a State betrayed so great a man.'"

Gods and Heroes; or, Greek Fairy Tales. By P. C. SANDS.
(Gill.)

This little book will serve very well for a children's first reading book in the mythology of Greece and Rome. We think, however, that some of the illustrations need a few words of explanation—e.g. there is a reconstruction of the "Temples and Statues on the Acro-

polis," which is described simply as "Photo. W. A. Mansell & Co." The little drawings signed "E. F." are not good enough; in fact, the travesty of Pan, on page 31, nearly made us condemn the book unread.

Le Livre Bleu. Par E. MAGÉE. (2s. Blackie.)

This volume forms the supplement to that excellent First French Book *Le Livre Rouge*, and carries the beginner by means of conversations and adapted anecdotes in French to the end of the regular conjugations. The pupil is left to form rules for himself, and these are stated, or rather indicated, in a few pregnant words. There is no attempt in the text to indicate pronunciation, and this is left entirely to the teacher. Otherwise the method is wholly modern. The pictures, evidently by various artists, differ greatly in quality. The frontispiece of the Tommy in France receiving a lesson in French pronunciation from three young professors is first-rate, and so is that of Marshal Saxe and the blacksmith; but with the infants and the counterpane on page 52 and the farm (page 88) something has gone wrong in the process of reproduction, and in none of the three is there any flavour of the soil.

Ce que disent les livres. By EMILE FAGUET. Edited by H. N. ADAIR. (Cambridge University Press.)

M. Faguet's mind is typically French, clear, logical, and eminently sane. At the same time he has a fine literary taste. If boys and girls are to read *about* books instead of reading the books themselves they can hardly do better than study these eight extracts from his lectures. The professor's method is to take a small portion of a great writer's work, or simply a passage from it, and examine it in detail, so as to discover its spirit, get the full meaning from its language, or show how it is an example of the writer's art. Mr. Adair is quite justified in claiming that the volume is an admirable example of the *lecture explicative*. Exercises, which include questions on or connected with the subject-matter as well as questions in grammar and passages for translation into French, are appended. The former set are intended to stimulate thought rather than demand reproduction. The editing is done on Direct Method lines, but there is a French-English vocabulary.

"Marlborough's Self-taught Series."—*Russian Self Taught.* By C. A. THIMM and J. MARSHALL, M.A. Fifth Edition, revised. (2s. Marlborough.)

This little work contains a most useful vocabulary of all the words likely to be of use to the student in his daily life. The pronunciation of each Russian word, according to the idea of the authors, is set down opposite the column containing the Russian. But this scheme of pronunciation should be revised in a future edition, for it seems faulty in several respects. Why should the sound of *a* in "father" be represented, as it is in this scheme, by *ar*, especially when we are told that the *r* sound is trilled? Then the sound of the Russian symbol for *ui* is represented by *wi* as in "wisdom." As a matter of fact, this sound is an intermediate one between "boil" and "bile," and should be learned from a native Russian, but its difficulty should not be ignored. Then the Russian *e* should be represented in English by *ye*: *Molniya* ("lightning") is faced by *mōlnstetyah*, which seems incomprehensible. *Syēver*, "the North," is said to be pronounced as *say'vehr*. The *y* sound should be inserted before *v*. The dialogues will be found useful, and are well chosen.

Stories from German History, from Ancient Times to the Year 1648. By FLORENCE ASTON. (Harrap.)

This book provides very pleasant reading for young people, and would be a good introduction to the more formal study of European history. We like especially the story of the first Rudolph of Habsburg and the account of Martin Luther, including his delightful promise of heaven to his little dog: "Fear not, Hānslein; thou, too, shalt have a little golden tail." There are an index of names and 17 full-page illustrations. The book would make a welcome present or school prize.

Letters from High Altitudes. By Lord DUFFERIN. With an Introduction by R. W. MACAN, D.Lit., and Notes by F. A. CAVENAGH. (2s. 6d. Oxford University Press.)

This is a reprint from the *World's Classics*, with the addition of notes, which seem intended for use in schools, and explain the allusions that ran so readily from the writer's pen. The added matter seems scarcely worth the added eighteen-pence of price, though any reprint of such a delightful book of travel is welcome.

The Cathedrals of Great Britain: their History and Architecture. By P. H. DITCHFIELD, M.A., F.S.A., &c. With Numerous Illustrations. New and Revised Edition. (5s. Dent.)

We heartily welcome this new edition of a most useful book. The author, the Rev. P. H. Ditchfield, has enlarged it by including the cathedral churches of bishoprics founded since the publication of the last edition, and has revised it by taking note of all im-

portant works of repair and adornment, and of any new light thrown on the history of the church he describes. For the benefit of those who are not yet acquainted with his book, it may be well to state that, after a brief general sketch of English church architecture, he treats separately each cathedral church, along with the collegiate church of Westminster and Beverley Minster, beginning with a sketch of its history, and then taking the reader, as a guide might take a visitor, first round the exterior, and then through the interior, of the building, ending with lists of its dimensions and principal building dates. In these days when we are debarred from foreign travel, it is well to remember that a holiday may be spent pleasantly in visiting some of our own noble cathedrals, and it will be spent profitably if we take Mr. Ditchfield's book with us and use it. In a small space it contains a vast amount of valuable matter, and its handy size renders it especially acceptable as a travelling companion. One note we may perhaps add to his account of Gloucester Cathedral. He speaks of "the carrels and studies of the monks" in the cloisters, and his explanation in that place is perfectly correct, but we may observe that "carrel," or "karol," has a wider signification, and means any small place in a church, enclosed with a partition or screen. It occurs sometimes in the descriptions of other than monastic buildings. The book is well furnished with plans and other illustrations, both useful and ornamental.

Elementary Geometry. Vol. II. By W. E. PATERSON, M.A., B.Sc., and E. O. TAYLOR, B.A., B.Sc. (1s. 8d. Clarendon Press.)

Those who are already acquainted with the first volume of this little work on elementary geometry will welcome the appearance of its successor. The latter deals with the geometry of the Circle and of Similar Figures in an interesting and attractive manner, and, in the hands of an able teacher, the course laid down should provide the necessary material for a valuable training in the subjects to be studied. The complete work covers the ground limited by Stage III of the recommendations of the Board of Education Circular 711. The discussion of the segments of a line on page 180 would bear revision, and the pupil would gain by an introduction at this point to the fundamental principle of *sense* in the measurement of lines and other geometrical quantities.

Mathematical Papers. For admission into the Royal Military Academy and the Royal Military College. Edited by R. M. MILNE, M.A., Assistant Master Royal Naval College, Dartmouth, late Instructor in Mathematics at the Royal Military Academy, Woolwich. (6s. Macmillan.)

The compilation is certain to be one of great value to candidates for the Army entrance examinations, more especially as it is issued not only as a single volume of question papers (1906-15) but also in pamphlet form in connexion with the July 1914 and subsequent examinations. Except in the case of the first, each pamphlet contains the questions for two successive competitive examinations, and is to be obtained for 1s. net. The answers to the questions are given. Mr. Milne is to be congratulated on having conceived so useful a plan as that of collecting and publishing this series of question papers with the results of the problems set.

Marlborough and other Poems. By CHARLES HAMILTON SORLEY. (3s. 6d. net. Cambridge University Press.)

This is, in some respects, an ideal biography published within a few months of the author's death, and "without flowers." As such it will appeal to Old Marlburians and to a wider circle. A single paragraph gives the biography. A son of the Cambridge professor, he entered Marlborough in his fourteenth year, whence he gained, in December 1913, a scholarship at University College, Oxford. After leaving school he spent six months in Germany, returning home on the outbreak of war. In August 1914 he was gazetted Second Lieutenant in the 7th (Service) Battalion of the Suffolk Regiment, and was promoted to a captaincy in the following August. On October 13, 1915, he was killed in action on the Western Front. The poems, some sixty-six in number, are given in chronological order, many reprinted from the *Marlburian* exactly as they stood. They are rough and jingling, but they ring true. He loved the old school, he remembered his *Odyssey* in the trenches, and, above all, he remembered the Wiltshire Downs and Barbury Camp, "was at his happiest in shorts, and got not many good reports." It is an honest face, with clear eyes and resolute chin that looks out at us from the frontispiece.

The Cambridge Book of Poetry for Children. Edited by KENNETH GRAHAME. In Two Parts. (Each 1s. net. Cambridge University Press.)

To many children, and to most lovers of children, Mr. Kenneth Grahame is known as the author of *The Golden Age*, but in his child's anthology, he has attempted a higher flight. There is, perhaps the best of all, William Allingham's *Child's Garland*, an anthology by a poet, and those two volumes by a lover of children,

Mary Woods. But Mr. Grahame is nothing if not original, and in his first volume he gives us a selection ranging from nursery jingles like "Matthew, Mark, Luke, and John" (in a version new to us) up to Macaulay's *Horatius*, which is given entire. Herrick, Blake, and W. B. Rands have four poems each, and of the remaining authors nearly one half are unfamiliar. The second part follows more conventional lines. We have in extracts such adult poems as Wordsworth's great ode, Keats's "Ode to Autumn," Shelley's "Skylark," and his "Ode to the West Wind." We cannot help thinking that either too much or too little is explained. The child will resent finding interspersed remarks intended for the teacher, and the child who needs to be told that a "buccaneer" is a pirate is not likely to know the meaning of "anomes and clari-golds." To one who has not read his Browning, the extract from *How it Strikes a Contemporary*, entitled "The Soldier Relieved," will be barely intelligible. We are far from maintaining that all poems intended for children should lie within their comprehension or be explained. We remember too well how much that charmed us in childish days simply by its melody and mystic force of words came back in riper age with double power when the full meaning was grasped. But we hold none the less that the bulk of poetry intended for children should bear its meaning on the face of it, and that the ballad or simple lyrical romance is the kind of poetry that appeals to most children. The great odes of Shelley and Keats are not for them.

The Elder Brother. By JOHN FLETCHER. Edited by W. H. DRAPER. (Cambridge University Press.)

Fletcher's comedy is reprinted for the benefit of masters who are tired of Bottom the Weaver, Tony Lumpkin, and Bob Acres on speech-day platforms. The play is not strikingly dramatic; indeed there is not one really good scene, but there are life and character. The two best personages are the middle-aged man, Lewis, and his brother Miramont. The former is a fine old John Bull in his contempt for learning. The editor thinks that it may be some recommendation to the play that the scene is laid in France, but as a matter of fact the tone is purely English, and the only notes of local colour are the references to the Universities of Paris and Louvain, with one mention of the vine. To schoolmasters it ought to be a much greater recommendation that it is the scholar who gets the girl, but, we are bound to add, he has to transform himself into a fighting man to do it. The book is excellently printed, and adorned with Fletcher's portrait and his father's coat-of-arms.

Keats: Odes, Lyrics, and Sonnets. Edited by M. (ROBERTSON) HILLS. (3s. 6d. Clarendon Press.)

The elucidations of Keats required by Greekless boys and girls are supplied in a simple form in this edition. The notes give also many references to Keats's life and letters. The selection is good, except for the inclusion of the two inferior sonnets, the *Nile* and the *Human Seasons*. Some of the editor's criticisms ought to excite discussion rather than secure immediate assent in the classroom. Here are four questions: Was Shakespeare ever the greatest influence in Keats's poetic life? Is the picture of Bacchus in the *Ode to Sorrow* merely a translation into words of Titian's "Bacchus and Ariadne"? Does the *Ode to Autumn* in any sense "reconcile the principle of life and beauty"? Did Keats "attain to the serenity which he had been seeking," or is the ode only the product of a mood? There is an unfortunate misprint in the song *In a Dream-nighted December*, ever being put in the last line for *never*. In the preceding line our editor has *steel*, a word which has frequently been oddly misprinted *steal*. The sonnet, *O that a week could be an age*, she holds, probably rightly, was addressed to James Rice.

Lyrical Forms in English. By NORMAN HEPPLE. Second Edition. (2s. 6d. net.) (1) *Selections from Keats*; (2) *Selections from Shelley*. By A. H. THOMPSON, M.A., F.S.A. (Each 2s. net. Cambridge University Press.)

Mr. Hepple's volume is dedicated to his sixth form pupils, past and present, whilst Mr. Thompson sets out to provide for the needs of "the student"; but Mr. Hepple's work is the more scholarly. We cannot agree with him that "every poem in the collection is of the highest quality," and we think some of his remarks need amplification before they can be accepted. But the collection is of a high order, and it and the prefaces should be of the greatest help in making the school study of literature alive and stimulating. We welcome this second edition.

We cannot feel that the Shelley and Keats volumes ought to be welcome to students. The student ought not to have selected passages of *Hyperion* to read. Even the most general reader might have been given the opening of the poem, instead of being plunged into it at line 72, and having twelve of the opening lines quoted in the notes. Nor have the introduction or notes grip enough to be more than pleasantly suggestive. To take two points only in the

(Continued on page 362.)

BOOKS BOUGHT AT GOOD PRICES.

Keats volume. The significance of the *Odes* as a stage in the development of Keats's whole philosophy and outlook upon life is not hinted at, nor, again, the equal significance of *The Fall of Hyperion*. This latter is merely mentioned, along with *Cap and Bells*, as showing melancholy evidence of declining strength. It seems strange in the Shelley volume to include Archy's song from *Charles I* when so much that is characteristic and beautiful is omitted. All these books are excellently got up—the binding is good, the pages pleasant to eye and touch. But why is Keats's *Bright Star* cut in two, the first four lines appearing on one page, the rest on a page otherwise blank?

Six Plays by Contemporaries of Shakespeare. Edited by C. B. WHEELER. (1s. net. Humphrey Milford.)

Dekker's *Shoemaker's Holiday*, Webster's *The White Devil*, Massinger's *A New Way to Pay Old Debts*, and *The Knight of the Burning Pestle* and *Philaster* by Beaumont and Fletcher make up a welcome volume in "The World's Classics" series. The editor has chosen well, and confined his notes to explanations of obsolete words given at the foot of the page.

SCIENCE.

Qualitative and Volumetric Analysis. By W. M. HOOTON. (3s. net. Arnold.)

This book covers the usual course in analysis which is worked through for an Intermediate Examination in Science or for scholarship purposes. A few useful hints are provided for the detection of acid radicals in mixtures where ordinary methods are likely to fail—as, for example, when a carbonate and a sulphite or a nitrate and a bromide occur together. The reactions of some of the rarer metallic ions and less common acid radicals, together with tests for some commonly occurring organic acids, are also given. We have noticed a few misprints, such as "ammomium" on page 1, and "26 c.c." on page 10 should obviously be 25 c.c. We can recommend the book as a useful and reliable laboratory companion.

The Moon considered as Planet, a World, and a Satellite. By J. NASMYTH and J. CARPENTER. (2s. 6d. net. Murray.)

The moon is always a fascinating object of study, particularly because its relative nearness to the earth enables one to examine its surface features with an ease and certainty offered by no other celestial body. This new edition of an old and famous book is a marvellous production for half a crown. It consists of more than three hundred pages of beautifully printed letterpress and an abundance of splendid whole-page plates. It is written in a pleasant and flowing style, and is well adapted to meet the requirements of the reader who may not be equipped with much scientific knowledge. For the sake of accuracy the use of the word "force" where "energy" is plainly meant should have been avoided (Chapter II). We strongly recommend the book to all who are interested in astronomy. A copy should be found in every school library.

A Treatise on Electricity. By F. B. PIDDUCK. (14s. net. Cambridge University Press.)

In this work the author has succeeded very happily in combining the mathematical and experimental sides of the subject, and, by assuming that the student already possesses a good working knowledge of the elements of electricity, he has been able to devote more space to recent developments along various lines of inquiry. It is very definitely a book for senior students, to whom it should be of great value, for it contains much information relative to recent work which is not easily to be found in collected form. The book opens with a short mathematical introduction, and then proceeds to deal with permanent magnetism, electrostatics, electric currents and their magnetic effects, thermoelectricity, induced magnetism, and induction of currents. The remaining half of the volume is given up to the consideration of special subjects—viz. applied electricity, electrolysis, electric oscillations, conduction of electricity through gases, radioactivity, and the theory of electrons. The printing and diagrams are both excellent, and the book can be strongly recommended for advanced students.

Electrical Apparatus Making for Beginners. By A. V. BALLHATCHET. (2s. net. Percival Marshall.)

Amateur mechanics who wish to make for themselves a variety of simple electrical instruments, such as cells, galvanometers, bells, motors, telephones, and induction coils, cannot do better than get this book and follow out its instructions, which represent the actual experiences of the author. The methods adopted entail the use of only the most readily obtained materials, a minimum of tools, and manual skill which any handy person will possess or soon acquire. The text is clearly worded and well printed and illustrated. On page 139 it would be better to suggest that a brass object, rather than an iron key, should be selected as the article to be electrocoppered. On page 145 we notice that the ampere is stated to be the unit of quantity; it is the unit of current.

BELL'S RECENT TEXTBOOKS.

MATHEMATICS.

The Marchioness of SALISBURY.

Principal:

Miss M. H. MEADE, B.A. (Moral Sciences Tripos).

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics,
Stockholm).

The College was opened in 1885, and was the first
of its kind in England. Students are prepared to be
teachers of Scientific Physical Education on Ling's
Swedish System. The Course extends over two
years. It includes the study of Anatomy, Physiology,
Theory of Education; the Theory and Practice of
Gymnastics, Massage and Medical Gymnastics,
Dancing and Outdoor Games. Students practise
teaching in schools in the neighbourhood. The College
stands in its own ground of 15 acres, in a beautiful
and healthy locality close to Dartford Heath.

The demand for mistresses of physical training
holding the Diploma of this College is at present far
in excess of the supply.

The course begins in September. Further par-
ticulars may be obtained on application to the
SECRETARY.

FRANK H. GELLING, Hon. Secretary.

ADVERTISEMENT and other matter for **AUGUST** issue should reach the office by **July 22nd**. Urgent Notices of Posts Vacant and Wanted can be received up to **July 25th** (first post).

SOUTHPORT PHYSICAL TRAINING COLLEGE.

Beautifully situated near the Sea in healthy surroundings.

President:

Admiral Lord CHARLES BERESFORD, K.C.B., M.P.

Principals:

A. ALEXANDER, F.R.G.S.; MRS. ALEXANDER.

The Staff consists of Medical Lecturers and experienced teachers in every branch of Physical Training, including a Swedish Mistress from the Royal Gymnastic Institute, Stockholm.

GIRLS of good education are trained as scientific teachers of Physical Training to qualify them for appointments as Gymnastics, Games, and Health Mistresses in schools and colleges. The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Play-Ground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

The Senate Edition.

"La Guerre," Vol. II.

A French Reader, compiled from articles upon the European War selected from the leading French Newspapers. With Notes on Idioms by TAYLOR DYSON, M.A. 10d.

The subject matter of this Reader, from its retaining interest, leads the student unconsciously to a better knowledge of modern French construction. Many of the articles are of a conversational nature, and of the greatest value as supplying a means of acquiring a fuller vocabulary and a better knowledge of the subtleties of the language. Volume I is in use at all the great Public Schools.

CONTANSEAU'S POCKET FRENCH DICTIONARY.

NEW AND REVISED EDITION. JUST PUBLISHED. Demy 16mo. Price 2s. net.

A POCKET DICTIONARY OF THE FRENCH AND ENGLISH LANGUAGES.

By LÉON CONTANSEAU.

Not only has the Dictionary undergone a thorough revision, but the work has been completed in many ways. Thus, a great many new scientific words have been added. Naval and Military terms will be found in great numbers, special attention being given to all that concerns Aviation; also land, ocean, and submarine warfare.

Some new words that have only come into current usage since the year 1914 will nevertheless be found in both languages. No pains have been spared in consulting prominent men of the day, so as to ensure correctness and enhance the value of the work, which will be found to maintain its old standard of excellence for all English and French words of common parlance, &c.

*. * Special Edition for Travellers and Pocket use, bound in Leather tuck, price 4s. net.

EXERCISES, separately. With answers, 3s; without answers, 2s 6d

"To those who are acquainted with the excellent textbooks on Algebra and Geometry with which Mr Godfrey's name is associated, this book will need little recommendation. . . . We have brief clear comments serving as introductions to carefully chosen exercises dealing with all the matter required for a complete school course. A welcome feature is the large, clear type—extra large in the earlier chapters, the readers of which will be mainly the junior students. . . . We can cordially recommend it to all teachers of the subject, and congratulate the authors on the production of an admirable textbook."—*Education*

"One of the best Arithmetic books we have seen. The type is excellent, conforming, as it does, to the standards laid down by the British Association Committee. . . . Free use is made of concrete examples, and the treatment, which is careful and sound without being laboured, should appeal to all."—*Times*

"This is one of the best Arithmetic books we have seen. . . . We believe that most teachers will welcome the prominence given to questions on Area and Volume and to 'Unitary Method.' . . . A special feature of the book is the excellent printing. We recommend the book to the notice of all teachers, and feel confident that it will have a very wide circulation."—*The A.M.A.*

Messrs. RIVINGTONS' LIST

ELEMENTARY LATIN PROSE EXERCISES.

By the Rev. A. E. HILLARD, D.D., High Master of St. Paul's School, and C. G. BOTTING, M.A., Assistant Master at St. Paul's School. Crown 8vo. 2s. 6d.

A Latin Version. 3s. 6d. net, postage 2d. Direct from the Publishers only to authenticated Teachers.

This book is designed as a complete introduction to North and Hillard's Latin Prose Composition, and may be used from the time when Latin is begun. The Vocabulary is kept small, so that there is constant practice in the inflection of the same words, and these are mainly such words as are met with when Caesar is begun. All that is exceptional in Accidence is carefully avoided.

LATIN PROSE COMPOSITION. For the use of Middle

Forms of Schools. By M. A. NORTH, M.A., Assistant Master at Clifton College, and the Rev. A. E. HILLARD, D.D., High Master of St. Paul's School, Authors of "Greek Prose Composition." Crown 8vo. 3s. 6d.

A Latin Version. 6s. net, postage 2d. Direct from the Publishers only to authenticated Teachers.

"Altogether this is one of the best books on Latin Prose Composition that we have yet come across. We strongly recommend it."—*Saturday Review*.
"Schoolmasters will do well to look at this volume very carefully."—*Guardian*.

ADDITIONAL LATIN EXERCISES.

By the Rev. A. E. HILLARD, D.D., and C. G. BOTTING, M.A. Crown 8vo. 2s. 6d. [Just published.]

The Authors of "North and Hillard's Latin Prose Composition" (see above), have had requests from several quarters to add to the number of Exercises; and so, while they do not consider it advisable or necessary to add to the original book, this book of "Additional Latin Exercises" is intended to meet the needs of those desiring a larger number of Exercises. These Exercises are parallel in all respects to the A and B series in the "Latin Prose Composition." Each Exercise is assigned by heading to its proper place in "North and Hillard's Latin Prose Composition," and in each Exercise the Construction and Vocabulary required are only such as have been applied before in the corresponding place in "North and Hillard's Latin Prose."

A Latin Version. 4s. net, postage 2d. Direct from the Publishers only to authenticated Teachers.

FIRST LATIN LESSONS. By C. M. DIX, M.A.,

Head Master of Longbridge Place Preparatory School, and Latin and Greek Lecturer in the Birmingham and Midland Institute. Crown 8vo. 2s.

The aim of this book is to teach elementary Latin by means of easy but carefully graduated Stories, Conversations, and incidents from Roman history, and by English Exercises based on the Latin text. The book has been made interesting and stimulating by variety of subject matter and by a Roman atmosphere. The portion of Grammar illustrated in a "Lesson" is indicated at the head of that lesson, and is printed in full at the head of the corresponding English Exercise. The colloquies at the end of many of the lessons are intended for viva voce drill, and can be supplemented by the teacher.

RIVINGTONS' GRADED FIRST LATIN BOOKS.

A new and modern set of six cheap books for beginners in Latin—Containing Latin into English and English into Latin Lessons with Grammar and Accidence, and a Latin-English and an English-Latin Vocabulary.

Books I, II, III, IV, and V. 1s. each net. Book VI. [In the press.]

Book I. 1s. net. Comprises the 1st, 2nd, and 4th declensions of Nouns—the 2nd declension of Adjectives—personal and reflexive Pronouns—the Verb *sum* and the 1st and 2nd conjugations of Verbs (active, passive, and deponent), including the Imperative Mood.

Book II. 1s. net. 3rd and 5th declensions of Nouns—Adjectives, 3rd declension—relative and interrogative Pronouns—comparison of Adjectives and Adverbs and 3rd conjugation of Verbs (as before)—some irregular Verbs—Pres. Infinitive Mood.

Book III. 1s. net. Revision of the five declensions of Nouns—Pronouns (continued)—Verbs in *io* (as before)—detective, frequentative, and inceptive Verbs—use of various cases.

"The three books combined cover all the ordinary grammar necessary. They are thoroughly workmanlike little volumes, and will be found very useful."—*Scottish Class Teacher*.

By the end of **Book III** a learner should know all the Nouns, Pronouns, Adjectives, Verbs, Adverbs, Prepositions, co-ordinate Conjunctions, and most common uses of Cases.

Book IV. 1s. net. Is confined mainly to the use of the Infinitive Mood in *oratio obliqua*, and to the Ablative absolute construction.

Book V. 1s. net. The Subjunctive Mood in all its uses, both dependent and independent. [Just published.]

Book VI. Supines, Gerund, Gerundive, and construction of *quoniam*, *quominus*, verbs of fearing, &c. [In the press.]

Books IV-VI are confined mainly to the Dependent Sentence and uses of the Infinitive Mood.

FLORIAN'S FRENCH COURSE.

FIRST FRENCH COURSE. By A. R. FLORIAN, M.A., Head Master of the Priory County School, Shrewsbury, Author of "A First Book of German Oral Teaching." Crown 8vo. With Illustrations. 2s. 6d.

Each Lesson is followed by a *Questionnaire*, a *Grammatical Section*, and Exercises for Oral and Written work. The author has kept steadily in mind the average pupil, and has made the Lessons as simple as possible. At the end of the book the Grammar, in English, and carefully graded, is gathered together in a separate section. The *Grammatical Terminology* is based on the Interim Report of the Joint Committee. Other features of the book are Special Vocabulary for each Lesson, a French-English Vocabulary, Reproduction Exercises in a separate section, and preliminary Pronunciation Reading Lessons.

The first Twenty-eight Lessons and their Special Vocabularies of "First French Course" Phonetically Transcribed.

By A. R. FLORIAN, M.A. Crown 8vo. 1s. 4d. net.

SECOND FRENCH COURSE. The text consisting of extracts from "Les Mousquetaires," specially adapted and forming a complete narrative. With *Questionnaires*, Grammar, Exercises, and a complete Grammatical Section and Vocabulary.

By A. R. FLORIAN, M.A. Crown 8vo. 2s. 6d.

The Second French Course continues on the same lines as the First Course, but it has been thought desirable to bare the work on a continuous story.

The above books have been placed on the London County Council's requisition list for Senior Departments of Public Elementary Schools.

FLORIAN'S FRENCH GRAMMATICAL READERS.

Series A.—With Vocabularies, 1s. 6d. each.

Le Blocus, par ERCKMANN-CHATRIAN.

L'Évasion d'Edmond Dantès, par ALEXANDRE DUMAS.

L'Homme à l'Oreille Cassée, par EDMOND ABOUT.

Series B.—Without Vocabularies, 1s. 6d. each; or with Vocabularies, 2s. each.

Nouvelles Génévoises, RODOLPHE TOFFER.

Le Capitaine Pamphile, par ALEXANDRE DUMAS.

Contes Choisis.

* Vocabulary to each now included, but these three Volumes will be supplied without Vocabularies unless otherwise ordered.

These Readers are issued in two series each containing 30 lessons, consisting of about 60 pages of Text in Series A, and about 70 pages of Text in Series B; the lesson being immediately followed by a *Questionnaire* and Grammatical Section in French. At the end of the books come Exercises and Grammar in French, and in Series A, a French-English Vocabulary. Series A can, if desired, be used directly after the First French Course. In Series B French notes are added, as well as a Vocabulary.

Each of the two series has a definite scheme of grammatical instruction, though the same order is not necessarily observed in each book.

The *Examiner's Reports*, 1916, on the Cambridge Local Examinations in French suggest that candidates would do well to offer a book as a basis of conversation, and the book, it is stated, should be a prose work by a modern author. Florian's Readers are just such books, and great attention is paid in them to the conversational side of French teaching. The books are of convenient length and interesting contents. Teachers might well give a trial to these Readers, which are specially designed to counteract the tendency to treat grammar as a subject apart, a tendency referred to in the Report. "The general impression . . . was that mechanical rules had been acquired somewhat at the expense of practice in the living language."

The use of the same author's Unseens and Passages for Translation into French—Junior and Senior—would certainly go far to overcome the "surprisingly limited vocabulary" of which the Examiners complain.

PASSAGES FOR TRANSLATION INTO FRENCH.

Selected by A. R. FLORIAN, M.A. In Two Books. Crown 8vo.

JUNIOR PASSAGES. 1s. 6d. This Course leads up to such examinations as the Oxford and Cambridge Junior Locals.

A Key, 5s. net, postage 2d., direct from the Publishers only to authenticated Teachers.

SENIOR PASSAGES. 2s. This Course forms a fitting preparation for the Oxford and Cambridge Locals, London University and other Matriculation Examinations, Civil Service Examinations, Oxford and Cambridge Higher Certificates, and other examinations of an advanced character.

A Key, 5s. net, postage 2d., direct from the Publishers only to authenticated Teachers.

FRENCH UNSEENS.

OCCASIONAL NOTES.

WE can add nothing to the splendid tribute paid to our lost leader by Lord Derby in the House of Lords and by Mr. Asquith in the Commons. Mr. Asquith, after two years of daily intercourse, spoke of him as a great and dominating personality—great even more as an administrator in Egypt and at home than as a soldier in the Soudan and South Africa. "Few men that I have known had less reason to shrink from submitting their lives to the pure eyes and perfect witness of all-judging Jove." No great man has ever less courted popularity or shown more indifference to the "broad rumour" of party politicians, and it was with a modest diffidence that he accepted his last great office of State. Like Wellington, he had his faults and foibles, but they are now forgotten. He had few intimate friends, but these clung to him through good and through evil report.

Lofty designs must close in like effects:

Loftily lying,

Leave him—still loftier than the world suspects,
Living and dying.

KITCHENER'S death makes us cast our eyes over the twenty-two months of War and take stock of what we have done. The first feeling is a sense of the steadfast courage and unselfish devotion of our Ministers and leaders, the second a sense of the abounding patriotism and spirit of sacrifice that has been shown, both at home and even more in our colonies and dependencies. Make what allowance you will for other motives—love

The Lesson of
the War.

of adventure, desire to escape from a dull sedentary life, and so forth—the enlistment of five millions of men still remains a response to the call of duty such as the world has never seen on such a scale. For the response, it must always be remembered, was made by nations the invasion of whose soil was only a remote possibility. This fact argues surely a high degree of intelligence, as well as of national sentiment. One can hardly imagine an uneducated England springing to arms because Belgium was attacked. The efforts of France in 1792, of Prussia in 1813, of America in 1860–5, are comparable to ours, but in these cases the country itself had to be saved from a foreign or internal enemy. How unnecessary seems the demand that we should teach patriotism in the schools—at least, patriotism in the narrow sense of readiness to fight! If Nature can do as well as this, had we not better leave it to Nature? There seems little need to stimulate the fighting spirit. Rather it is the spirit of foresight, of plain living and high thinking that needs fostering.

A REVIEW of Kitchener's life raises once more the question why the great public schools have produced so little first-rate military capacity, seeing that the classes from which their boys are drawn had for many generations a virtual monopoly of the Army. A glance at the roll of soldiers who have won most distinction in the field since the beginning of the nineteenth century gives remarkable results. Moore was educated abroad from the age of ten. Wellington, it is true, was for a short time at Eton, but most of his training was gained at military schools on the continent. His most capable subordinates, Beresford, Hill, Graham, Cranford, and Cotton were educated privately, or at small schools, though the last named was at Westminster for a short time, but, be it noted, as a day-boy. Of the men of the Mutiny, Havelock was at Charterhouse, but Outram and Colin Campbell were educated in Scotland and Nicholson in Ireland. None of the Napiers was a public-school man. Of recent and contemporary army leaders, Roberts was an Etonian, but Wolseley was brought up in Ireland. Lord French entered the Navy at an early age, and Kitchener was educated partly by private tutors and partly at Geneva. It would thus appear that the only genuine public-school men who have reached the first rank as commanders during the last century and a quarter are Havelock and Roberts. The fact is the more curious because the public schools may fairly boast that they have furnished our forces with the most competent of their subalterns. It may possibly be said that formerly boys entered the Army so early that the schools had no real chance to fashion them. The existence of Addiscombe and Haileybury, too, must not be forgotten. If such be the explanation, it will be the more interesting to see who comes to the front in this War. Clifton can claim Sir Douglas Haig and General Birdwood; Smith Dorrien is a Harrovian, and Ian Hamilton was at Wellington College.

THE scientists have had a good innings; the business men have through the Associated Chamber of Commerce formulated their demand that all education should be subordinated to the production of competent employes. The classicists too have had a say, but the Humanists as a whole have so far been dumb dogs. We are glad to hear

The Defence of
the Humanities.

that there is some prospect of this silence being broken. The Historical Association set the ball rolling, and an important conference of representatives of various associations has revealed a general unanimity of view. It is time the public was reminded that the business of the schools is the training of boys and girls for life, not merely for the workshop or the counting-house. No hostility to science was shown and the need for more of it was freely recognized. We hope the movement will take definite form, and not be content with a mere waving of the humanistic flag. What is wanted is a concordat between the scientist and the humanist, on the nature and the amount of their diverse studies which ought to be included in the varied curricula of our schools.

THE Conference of Head Mistresses that met this year at Wycombe Abbey was exceptional, and, delightful as it was if regarded as a summer gathering of

Dr. Barnes on
Careers
for Women.

distinguished teachers, we cannot help contrasting it with last year's meeting at Walthamstow, and expressing a hope that it will not be taken as a precedent.

The Master of the Temple was invited to give the opening address, and, as far as we have observed, his paper was the only part of the proceedings that the daily and weekly press have deigned to notice. As is natural, he spoke of the women he had known, not of schoolgirls, whom he had neither taught nor examined, but he emphasized one aspect of women's education that High-school mistresses have not yet fully laid to heart. High schools were a late development, and they were naturally modelled in the first instance on secondary schools for boys. While boldly denouncing any artificial barriers to the careers of women in any of the learned professions, he held that their chief vocation is, and in spite of the War must still be, motherhood, and that their training must so far differ from that of men. We would he had gone a step further and advocated such changes in the conditions on which degrees are conferred by his own University and Oxford as would encourage this differentiation. For the rest the address seemed adapted rather for a Church Congress than a gathering of undenominational teachers. He spoke as if all his hearers were Churchwomen, and first among the professions to be opened to women he put that of Deaconess—a new order of service to be established in every large urban parish, with a vocation, status, and stipend as definite as that of the vicar. By whom these should be appointed and paid he did not discuss. Further, he held that there was, and would be increasingly, by reason of the War, an excess of trained women teachers. Scholastic agencies tell another story, and the evidence from the United States, which offers the nearest analogy to England, is all the other way.

IN his article in the *Nineteenth Century* Mr. A. C. Benson gives expression once more to the ideas on education which have been long associated with his name. Our curriculum needs revising to suit modern needs; the theory that boys who learn Latin and Greek at school can easily pick up a knowledge of modern life afterwards has broken down. Education has been too much sacrificed to the culture of a few specialists, "an aristocratic ideal little fitted for democratic times." The basis of the new curriculum must be English, at least one modern language, geography, history, science, ele-

Mr. A. C. Benson
on Education.

mentary mathematics, and Scripture. His suggestion of teaching science by means of "popular lectures illustrated by experiments" attracts us as little as does any method in which the teacher says and the pupils hear the lesson. To geography he would give a very high place. He desires to see it develop into a study of the industries and commerce of the world—something about iron foundries, printing presses, steam ploughs, shipyards, and so forth. Of a knowledge of the social and political conditions of nations, however, he says nothing. He thinks we devote ourselves too exclusively to cultivating clearness and exactness of thought, and think too little of fostering imagination and the acquirement of knowledge. Mr. Benson's views are large and liberal, but there is a certain suggestion of flabbiness about his new model.

MR. BENSON'S weakness as a prophet lies in the narrowness of his experience. He has known, as boy and master, one school only, and that a school which has always had a reputation for efficiently teaching none but its clever boys. He is, in fact, the victim of a peculiarly vicious system of pedagogical inbreeding. The result of this narrowness is shown in his remarks in the *Nineteenth Century* on history as a school study. He is rather pessimistic about its possibilities. As a boy he was compelled to read Freeman's *General Sketch*, certainly a very bad beginning. As a master he tried many experiments, but apparently was not very well satisfied with the results of any of them. The most his boys got, he thinks, was "some comprehension of the drift of affairs," "an inkling of the growth of political movements." The only thing in which boys are interested are the biographies of great men, but in real history economics and social conditions play the largest part. His statement may be true of the Eton boy, who naturally cares little about the annals of the poor; it certainly is not true of all boys and girls. Teachers with the requisite knowledge and power of exposition find it easy to interest children in the Manor System, the Peasant Revolt, the Life of Monasteries, and the Industrial Revolution. Again, history teaching may well begin with romance, but it need not end there. You may start with Frederick and end with the study of the economic and social condition of Prussia. As for comprehension—well, each of us must understand of history, as of science, as much as he can. An imperfect understanding is much better than none, and certainly it is all that most of us, young or old, will ever attain to. With Mr. Benson's doctrine that history has no direct practical bearing on life we have no space to deal, and must content ourselves for the moment with a categorical negative—unless, indeed, by "practical" he means "money-making."

MR. BENSON does, however, put his finger on one great difficulty in giving young people a true view of history, a difficulty which has been well illustrated by recent occurrences. History, he says, really consists less of striking events than of slow movements and an enormous number of small, neutral-tinted occurrences, the real significance of which is hard for the pupil to understand. The grey predominates over the black and the white, yet it is on the black and white that we centre the attention of boys and girls. The result is seen in the

The Dull Side
of History.

constant expectation that we shall get black and white in this War, and the disappointment, that we get only grey. The battle of Horn Reef (if that is to be its name) disappointed us because it was not a decisive victory, but Admiral Henderson reminds us what a large number of naval battles have been indecisive. But that is the kind of thing that we were never taught at school, and thus we got a lop-sided idea of naval history. We learnt all about the Nile and Trafalgar, but we never learnt that for one Trafalgar there have been ten Horn Reefs.

THE question of the relations between the L.C.C. and the aided schools, to which we alluded last month, has been brought prominently forward by a letter from Mr. G. L. Bruce in the *Times Educational Supplement*. Mr. Bruce states that the Council have decided to discontinue the grant to the James Allen School, Dulwich, and the Spital Square School, Spitalfields, because the Governors have declined to comply with the instructions of the Council about reduction in expenditure. It is not that the Governors reject the view of the Council that economy is necessary; they only claim the right to decide what form it is best for the interests of the school that economy should take. The amount at issue in one case is £50; the Governors wish to save it in one way, the Council in another way, and that the particular way which they have prescribed for all schools alike, regardless of varying circumstances. To judge of the case fairly, it must be remembered that the Council's subsidy is not, strictly speaking, a grant-in-aid at all, but is payment for the education of the County scholars. Though nobody denies that where the Council pays £20 a head for 150 scholars the financial gain to the school is considerable, as the cost of education per head diminishes as the numbers grow larger, or that the Governors are making some sacrifice in refusing to bow the knee to the County Council, we heartily applaud their action, and trust their example will be followed by other Governing Bodies. United resistance to the demands of the Council bureaucracy could hardly fail to produce some effect upon this petty dictation.

WE regret the action of the County Council for many reasons, not the least of which is that we believe their policy will tend to weaken the position of Local Authorities. We have no desire that that should happen, because it would certainly lead to the strengthening of the Central Authority. If local influence decreases, central influence—in other words the power of the Board of Education—will increase; and the very last thing that we want to see in England is an all-powerful Government Department, ruling education through officials and inspectors. The system of checks and balances we believe to be as valuable in the administration of schools as in the general government of the country.

THE Memorial of the Professors of the Imperial College of Science and Technology did well to speak of the confusion of aim which prevails on the modern side of most public schools, but when they contrast it with the concentration of aim at Osborne and Dartmouth it has to be remembered that these two institutions give vocational training pure and simple, an impossible

limitation for a school. The most important point the Professors make is the need of a great increase in the opportunities for a clever boy to get a training in science at colleges and Universities. As things are at present, most of our budding scientists have to begin earning their living at sixteen. The Professors suggest that what is wanted is a large number of Government scholarships to carry them on to places of higher education. Half a million a year, they think, would be needed for the purpose. Another quarter of a million is required for increasing the salaries of the junior staffs and endowing research fellowships. Three-quarters of a million for scientific and technical education ought to be a bagatelle to us, but we fear that it will be a mountain to the Treasury. Still, we have secured £40,000 this year for research, so we need not abandon all hope.

DR. UPCOTT, of Christ's Hospital, pleads in the *Times Supplement* for Latin and Greek without advanced composition, which he thinks is of small value except for the very select few who are likely to become pure scholars. If we understand him rightly, he would allow candidates for classical scholarships to offer science or mathematics in place of prose and verse. This would clearly entail some modification in the curriculum of public schools whose pupils proceed in any numbers to Oxford or Cambridge. But of boys and girls who intend to study subjects other than classics at a University, there are a very large number who need some Latin but need no composition. For the advanced study of English and modern languages, some knowledge of the Latin language and literature is essential. The student of history must be able to read medieval Latin. For the study of law and medicine a knowledge of the vocabulary of Latin is useful, though not indispensable. But in none of these cases is scholarship required. There is a very large field for Latin without composition. Most of what we have said applies in a minor degree to Greek.

THERE lies before us a report of the work that has been taken up since the beginning of the War by the pupils of a large girls' school, the name of which we do not mention, only because we have no doubt that the Old Girls of many another school have done as well. Many and varied are the departments of life into which these young ladies have found their way. Some are in banks, others are in hospitals, others again are *chauffeuses*, more are munition workers or are doing farm work. The War Office took nine girls straight from the school and are asking for more. All this is a very sound testimonial to the general wholesomeness of the education given in girls' schools.

CLASSES in Russian have been started at twenty-five centres in London, and provision for instruction in the language has been made at Manchester, Leeds, Bradford, Sheffield, and other places. We should like to ask the authorities in these towns what means have been taken to secure capable teachers or to test the competence of those who offer themselves as instructors. We do not raise these questions because we know anything to the prejudice of the teachers of Russian. We have no knowledge of them, but we know that education is still

The L.C.C. and the Aided Schools.

Classes without Composition.

General Ability.

Checks and Balances.

Memorial of the Imperial College of Science.

The Teaching of Russian.

the happy hunting ground of the incompetent amateur, that the teaching of modern languages has in the past suffered much at the hands of the *émigré* and the refugee, and that the number of English teachers of Russian must be extremely small. It will not do much good if a jerry-built structure of Russian be hastily run up. It will do a great deal of harm if young men and women acquire a distaste for languages through the incompetence of their instructors. It is strange that no one proposes to inquire into the efficiency of these teachers; but the fallacy that anyone who can speak a language can teach it still survives. It is quite as prejudicial to good teaching as the notion that you can teach a language without being able to speak it. These remarks do not apply to the recently founded Professorships of Russian in the Universities of Birmingham and Leeds.

IN view of the appointment of a Royal Commission we have, in addition to our regular Welsh letter, devoted considerable space to Welsh education reform, and we are pleased to observe that the leading article in the June number of *The Welsh Outlook* embodies the bulk of the article on "University Reform" that we published last month. In the same number there is a striking article by Sir Harry Reichel on "Culture v. Kultur." The Central Welsh Board, under the title of "To-day and To-morrow in Welsh Education," has issued a Referendum to Local Education Authorities containing an historical analysis of current problems with suggestions for their solution. The memoranda by the Chief Inspector on the place of Latin in the curriculum, the correlation of Examination and Inspection, and on Pension Schemes for Teachers will interest English no less than Welsh educationists.

LOCAL AUTHORITIES.

ONE of the resolutions passed by the Association of Head Teachers at Nottingham is to be applauded. It was moved: "That this Conference considers the recent alarming growth of juvenile crime cannot be dissociated from the growing prevalence of unrestricted attendance of school children at kinema shows, and earnestly appeals to the Government to promote legislation requiring licensing authorities (a) to restrict the attendance of children at such shows by fixing a time and age limit; (b) to exercise a stricter censorship over films which may be exhibited when school children are present, with the view of promoting the moral welfare of the young; and (c) to insist on a high standard of cleanliness and sanitation in the buildings, and veto the attendance of children excluded on medical grounds." The number of picture palaces in any large town, and in some small ones, is conclusive evidence of their popularity, and one of the speakers said they are rendering a great service to many of the poorer people of the nation. The chief objection is, especially as regards young children, that so many of the popular films represent entirely false values of life and conduct. If they are constantly observing the behaviour of criminals, fools, or lunatics, they will imitate them.

FARMERS cannot complain that those in authority have not displayed unremitting anxiety to supply them with any labour they may require at the present time. Women who are willing to work have been registered in all parts of the country, and to help with the hay harvest the boy scouts are ready to mobilize. The conditions of service agreed upon by one of the farmers' clubs and a boy scouts association provide that patrols of six scouts or more will be billeted on a farm in charge of a responsible leader for two or four weeks. The hours of labour are to be limited to an average of

seven each day, and no work to be done before breakfast. The farmer must pay railway fares and expenses of transit, provide suitable sleeping accommodation in barns or granaries, and three substantial meals each day. The scouts take their own blankets and sleeping kit.

A NEW form of compulsory War Saving is suggested by the Juvenile Advisory Committee of the Norwich Labour Exchange. The Committee is of opinion that, in order to prevent the growth of extravagant and harmful habits in the youth of both sexes, and, in view of the likelihood that the high rate of wages now received by them will not be continued after the War, it is desirable, while not interfering with the rate of wages, to limit the amount actually received by children under seventeen years of age. As a maximum the Committee suggests 10s. in the case of a youth living at home, and 15s. if living away from home, the balance to be invested on behalf of the employé in War Loan Stock.

To promote War Savings among children attending elementary schools in Northumberland, a scheme has been adopted which the President of the Board of Education has commended. "The men of the county," he says, "have done magnificently, not only in the field and at sea, but in the mines and workshops at home. I am sure the children will be eager to do their part also, and I think the Committee deserves credit for giving them direct opportunities of serving the nation in a practical way." During the month of May over £2,000 was saved in the elementary schools.

SCIENCE NOTES.

THE very interesting studies in the mental attitudes of children which were described by Dr. Kimmins in the latest issue of the *Journal of Experimental Pedagogy* confirm the prevalent opinion that girls are more subjective and boys more objective. The further and more debatable conclusion is reached that girls are more reflective. It may be granted that this was true so far as the tests went, and would probably be true for other cases where the subject-matter upon which the reflective has to work is of human or biological interest. Possibly boys would be found superior if the subject-matter were mechanical. The issue raised is of importance to science teachers; obviously it has a bearing upon the difference between science curricula and syllabuses for boys and those for girls. Is the choice of botany for girls and physics for boys based on sex-aptitude, on future responsibilities of the boys and girls, on mere tradition, or on the supply of teachers competent to deal with the subjects?

THE position of science in the great public schools forms the theme of many debates and much newspaper rhetoric. We hope real advance will result. This will happen if constructive work be taken in hand with wisdom, to which knowledge is the key. Dr. Garnett has the knowledge, and he addressed words of wisdom to the Association of Teachers in Technical Institutions at their meeting on June 17. He drew attention to the mistake of giving boys on the classical side, whose destination might be the Diplomatic Service, a slow course of detailed instruction in practical physics. To the future engineer it is worth while to spend considerable time on practising exercises on the weight-thermometer and its construction. The classical-form boy wants a different course, somewhat rapid and offering wide vistas and generalizations based on striking and simple lecture-demonstration. This is a problem which might well be discussed by the Public Schools Science Masters in view of the tide of opinion which is now setting strongly in favour of science for all boys.

ANOTHER educational reform, possibly the greatest in our days, will be effected by the universal training of the adolescent. From fourteen to seventeen or eighteen our boys and girls must be under skilled educational supervision and instruction. For the bulk of the people this will take the form of daytime continuation classes in schools or factories. What part of the instruction should be scientific (in the narrow sense of relating to chemistry, &c.)? In the trade continuation schools of Munich lessons are given in elementary hygiene, especially in relation to the workshop.

Further scientific instruction relates to the special trade, and we will instance the training of the baker's apprentice. Between fourteen and eighteen the apprentice acquires a knowledge of the chemical processes on which the trade is based. In the first year he learns the different kinds of grain, the diseases to which they are subject, how best to preserve it. He learns how to test flour, to detect foreign substances, and trace causes of contamination. In the second year he obtains a knowledge of milk, butter, margarine, &c., and of fuel. In the third year he receives scientific instruction in fermentation and the effects of heat. In the fourth year he studies various kinds of bread, and he himself makes chemical experiments and uses the microscope. It is evident that a course which is planned on such lines will broaden his outlook as a tradesman and make him adaptable to new developments in the industry.

IN his address to the N.U.T. Conference at Buxton, Mr. C. W. Crook referred to the place of science in primary schools. His allusion to present practice was somewhat caustic—"Much of the so-called Nature study now attempted gets no further scientifically than the stage of classification, and is rather destructive of Nature than instructive in scientific principles." His remedy appears to be the simplification of spelling and of weights and measures, thus obtaining more time for scientific teaching of hygiene, gardening and geometry, with some practical mensuration and simple physics. We may point out that Nature study itself may be infused with the scientific spirit, without destructiveness of Nature and the æsthetic spirit, by attention to function as well as structure. Prof. Miall showed how this should be done in his "Object Lessons from Nature." Morphology is a poor study for the adolescent unless structure be seen in its relation to the life of the organism.

THE large spot group which was of such interest to solar observers last month is again in view. A small telescope will suffice to project an image of the sun about four inches in diameter, when the spot group can be shown to a dozen pupils at a time. If the solar image is 100 mm. each millimetre corresponds to between eight and nine thousand miles, so that measurement of the dimensions of umbra and penumbra gives an interesting answer to the question: "Could the earth be enclosed in the vortex of incandescent gas which constitutes the spot?"

SCHOOL MUSIC IN THE LIGHT OF THE WAR.

THE evils which war brings in its train are so appalling that one is inclined to seize eagerly upon anything good which can be attributed even indirectly to its influence. Economic, moral, and spiritual stock-taking is for most of us a distasteful task, undertaken half-heartedly in times of peace; but, in such strenuous days as these, the duty simply dare not be shirked. National education cannot escape this scrutiny, and, so far, its pioneers have reason to be thankful that many of the results of their labours are such as to justify their belief in the power of education to call forth and develop those traits of character which are essential to the winning of a great war. One need not specify these, but, concerning one particular phase of education, there is enough evidence to show that we have failed lamentably. I refer to the fact that the so-called musical education which has been given to the millions of men in our new armies has utterly failed to produce such results as might reasonably have been expected at this juncture in our national existence. Read any accounts you like of the social life led by men on active service—provided they are not Englishmen—and what do you find? "The Russians, while awaiting the attacks of the enemy, were singing with perfect unanimity and precision some beautiful folk-songs"; "the Germans in the opposite trenches were evidently trained singers, for they had a fine choral concert every evening"; and so on. One need not labour this point: everybody has read dozens of similar statements. But what about our own men? Well, the Londoner, at any rate, requires no enlightenment on

this point. Observe that battalion marching to Waterloo Station! There is no band to inspire the men; this fact alone is enough to make one writhe. Now and then feeble attempts are made to start a song, but only a very few men seem to know anything more than the chorus, and even the words of that are only partly familiar. Consequently this musical performance soon fizzles out. Then someone else tries to enliven the march by whistling the fragment of a music-hall song, but, as this once more is known only to a few, it expires in a melancholy *pianissimo*. And so the procession wends its way in a depressing silence, not because the men do not want to sing, because there seems to be no song available which everybody knows, and Tommy, being by nature especially averse to making a fool of himself in a musical way, does not care to sing alone. Reports from the Front are not more encouraging. The men know many fragments of songs, which they sing till they are tired of them, and then "nothing of importance occurs." Apologists who are more acquainted with one or two specially musical regiments than they are with the Army as a whole, will criticize this pessimistic view, but there is no doubt that the statement made above is generally true. "Tipperary," a really good marching song, proved an antidote for a time to the musical apathy of the Army, but apparently its vogue is over.

Now, considering the paucity of the English soldier's musical repertory compared with that of all the other armies, is it not legitimate to doubt whether the vast expenditure of money and effort on teaching singing in boys' schools has been worth while? If music is not an outlet for the emotions—especially emotions such as are experienced by men engaged in deadly combat—what value does it possess? Of its worth as an inspiring, and often steady, influence there are no two opinions held by competent observers. One gladly admits that Tommy enjoys listening to the performance of a band or to vocal music sung by concert parties. Also that when he is confronted with music that he really *knows*, such as a favourite hymn, he is as sincerely affected by his performance as most of the soldiers of other nationalities. But he cannot be always singing hymns, although we are told that, to eke out his exiguous repertory, he is constrained frequently to indulge in garbled versions of hymns when on the march!

It is impossible to avoid the conclusion that if our musical education cannot show better results than this, then it is worth less than its advocates claim for it. It would be ungracious not to praise the devoted efforts of Dr. Walford Davies and others to atone for past deficiencies, but ought it to be necessary to improvise suddenly a system of elementary musical instruction for men who are supposed to have already received it? It is probable that this jeremiad will offend some idealists who contend that tangible results in education ought not to be looked for, but that, as far as music is concerned, we should be content to trust in "the refining influence of music on character," and so forth. Some of us are rather tired of platitudes of this nature; they are too often uttered as a cloak to hide aimless and sloppy teaching. Besides, tangible results are not incompatible with a high idea of the educational value of a subject.

Nearly all the men in our armies are supposed to have received musical instruction for some years, taught from a practical standpoint, the subject being included in the curriculum of all elementary, and in nearly all secondary and public schools; moreover, "practical music" generally means singing, and "singing" means singing songs. There must be some reason for the failure of this instruction to satisfy legitimate musical claims in a time like the present. The causes of failure are many, some obvious and others more obscure. Limitations of space preclude the mention of more than a few.

Firstly, music seems to be taught in schools rather on the principle of giving the children present employment—and perhaps enjoyment—instead of considering also the musical needs which will arise when they become adults. On this point one may be permitted to remark that if children leave school without knowing by heart a fair number of national

songs and without being able to read for themselves new vocal music of a reasonable degree of difficulty, then the musical instruction given in that school is inefficient, whether the children's "characters" have been "refined" by the instruction or not. To sing is to sing songs, and these cannot be sung satisfactorily until they are thoroughly known. As regards the other point, would any school-master out of Bedlam pretend that he had taught literature if, instead of teaching children to read, he merely made them repeat after him, parrot-fashion, some passages in prose or verse?

Some attempts have been made half-heartedly by the authorities to ensure that all schools in the country should agree to teach the same national songs, more or less, so that there will be at least a few songs which everybody will know thoroughly. For some reason or other this procedure has not been insisted upon with sufficient emphasis. If the lamentable conditions described at the beginning of this article are to be altered, no other course seems possible but that the Board of Education should boldly demand that certain prescribed national songs should be learnt by heart—words and music—by the scholars in all schools under their control. "Prussianism!" do you say? Well, even that has a few virtues amongst its many vices.

Secondly, music does not seem to be taken seriously by many Educational Authorities. They merely dally with the subject; they think that on *a priori* grounds it ought to be included in the curriculum, and that is the extent of their interest in the matter. Now few subjects afford such facilities for frittering away valuable time as music. If any results worth mentioning are to be attained, the subject must be taught systematically by competent teachers, with a constant regard to the end in view. This is not necessarily a plea for more time to be given to the subject, but for a better use of the time allotted. During the period when a boy's voice is "breaking" he has to give up singing, and, although even at this stage useful musical work could be done, one might condone a cessation of musical instruction at this stage if more thorough work could be done in the earlier years of school life. It is between the ages of five and twelve that the child is most susceptible to musical impressions which will last.

It is to be hoped that every head master will take an early opportunity of reviewing the musical instruction given in his school from the standpoint of the possible usefulness of this instruction to the boy in after life. I am quite ready to admit that in many schools very beautiful singing has been and can be heard, but, judging from the difficulty experienced in getting young people to take a practical interest in any form of choral music when they have left school, there seems to be something lacking. The remedy is well worth seeking for.

It need hardly be said that the foregoing remarks apply chiefly to boys' schools. Music teaching in girls' schools is carried on under more favourable conditions, as a rule, and more satisfactory results are achieved. Nevertheless, there seems to be no valid reason yet advanced for the notion prevalent to a greater degree in England than probably anywhere else, that, while music is a subject which every girl ought to study, the boy should look on it as an "extra," or at least as a subject which need not be bothered about over-much.

R. T. WHITE.

THE BRADFIELD GREEK PLAY.—Midsummer Day was celebrated this year by the performance of selections from *A Midsummer Night's Dream*. The music and acting, we are informed, were admirable, but we cannot help recalling the keen delight with which in old days we witnessed the masterpieces of Greek tragedy delivered entire in the original in the same place under the inspiration and guidance of the second founder of Bradfield (as Thring was of Uppingham), Dr. H. B. Gray, and we hope that with the decline of Greek studies in English schools that most informative and inspiring of school *prolusions* has not departed. To name the theatre "Gray Pit" is but a barren honour to the founder.

THE WINTER OF OUR DISCONTENT.

SCHOOL had been dismissed two hours ago. The classrooms were a desert of desks and blackboards, enlivened by busy charwomen with clinking pails and waving dusters. One of the coldest days of a cold, young March was fading into twilight. The young birch trees on the common shivered lightly in the sharp, snow-washed air. The pervading grey of sky lightened in the west into the paler gleam that did for sunset; the ways were thick with wet slush and sodden snow.

That morning the trees and buildings, outlined softly white, had been part of a fairy landscape, spellbound, and mortals toiled grotesquely to their work like big gnomes. But, after the snowfall, a wind had risen, bringing later in the day a sleeting rain. Now the world stood bare and actual and cold. And the nakedness of the trees was their beauty. A woman stood at one of the school windows, and, just outside, a robin sang from the naked bough of a sycamore tree. The bird suddenly flew off and the woman turned away from the window. She was in the Mistresses' Common Room, and she shivered as she looked at the dying embers in the grate and at the scattered books. War economy had prevented the replenishing of the empty coal-box after school hours, and she, deep in work, had hardly noticed how cold the room was getting.

"We shall have to go very soon, Miss Sharpe, or the cleaners will turn us out," she remarked to a younger woman seated at one of the tables. "I must just finish this set of papers. Will you soon be ready?"

"Ready when you are," was the answer. "What a blessing that the longer days are coming."

A new lighting order had just been issued by the Government, and this school was in one of the principal danger areas. For a few minutes there was silence in the shadowing room. Then a sudden laugh rang out, gay and infectious. Miss Sharpe giggled sympathetically. "Another howler?"

"Oh, do listen. What do you think of this for the Holy Grail? 'A kind of iron grating through which the nuns used to look; much sought after by knights of old!' I wish I could remember all the funny things I come across. Did I tell you what I got in an account of Froissart the other day? 'A clergyman by profession and a story-teller by nature!'"

"That's rather neat," laughed Miss Sharpe. "You should make a collection of *bons mots*."

"H'm! I have never made a collection of anything—not even of crests or stamps. But," she went on, "I don't think we get many howlers from our children, do you? They have not enough imagination or of sheer stupidity; they are too—too—"

"Commonplace?" was the suggestion.

"Perhaps, yes—too tame and unoriginal and unsophisticated. Are there any *real* children left in these parts?"

"Oh, yes," said the other reassuringly. "I am sure there are. These girls are quite clever, too, with their hands. I am teaching Upper III to make their own relief maps, and they are quite keen about it."

"'Rude mechanicals that work for bread upon Athenian stalls. . . . How horrid of me! Do you know, I gave a Nature-study lesson to-day to Form IV? I wonder what our good Miss Evans would have said to it. You may imagine how unorthodox and amateurish it was. The children could have given me a lesson, with beautiful diagrams, on the bud-formation of the ash, or—the scientific planting of bulbs. But not one of them seemed to know anything about the song of the thrush or blackbird, and only two girls had ever seen wild daffodils growing. They are mostly scholarship children in this Form, of course."

"Shall we ever have our full staff again?" queried Miss Sharpe. "Only on two single days this year have we all been at work."

"Not until the winter is over, or the War!"

They shivered as they passed out into the corridor. "Ugh! This cold is to despair!"

"I was on duty in the cloak-room to-day," said one. "Don't you wish we could get the architect down and shut him up in that place for a whole morning?"

A big smiling charwoman opened the side entrance to let them out.

"Good night, Mrs. Driver. Dreadful weather, isn't it?"

"Good night, miss; yes, miss. But too bad for the Zepps—that's one mercy, ain't it, miss?"

"Mrs. Driver always turns the dark cloud inside out, doesn't she?" remarked Miss Sharpe.

"Yes, she's quite a dear. You are going by 'bus, of course? Good night." And the older woman turned to cross the common on her homeward way, for it was her pleasure to have a forty minutes' walk to and from the school.

The cold daylight was still struggling to hold its own, but the sky was covered with darker clouds, wind-drifted, through which could be seen the thin silver edge of a young moon, and one pale star. Surely this winter had been the longest and dreariest that ever was! And yet that January, mild and wonderful—a month of sunny days and delicate sunset skies that rivalled June's. And the nights! She could look back on a long procession of nights whose beauty was the eternal one of star and flying cloud and moon-steep world, but with an added beauty, strange and new, of sweeping shafts of light, crossing and re-crossing, pairing and dividing, losing themselves in the depths of heaven and scattering filmy fleecy cloud-bits that played at hide-and-seek in the vast garden of the sky. Indeed, it had been worth while, this tired stumbling along dark streets and darker wayside paths.

But, always, the heavy sound of booming guns prevented any forgetfulness of the contrast between heaven and earth. Or rather, were not heaven and earth both concerned, and Deity and angel surely not so far away? And those nights of the terror! It did not do to think of them. But was it not well to have at least this much direct share in "things"?

And Spring was coming. She saw it in the lingering days and earlier dawns, she heard it in the now unending songs of the birds. Why, there was the blackbird; he had been tuning his golden throat these many weeks, and now the notes fell like rainbow droppings on the dusk. Spring stirred beneath the black earth and in the trees, no longer merely black. It stirred, too, on the battlefields.

The New Life was coming. She knew it, she knew it, she knew it! And the human soil must be prepared—the tiny patch that was hers to tend. The good seed must be sown. And she—she would not flag.

It was quite dark as she crossed the parade-ground. The common lay still and white; the great barracks were a frowning threat.

Then, from either horizon, east and west, shot up a sudden shaft of piercing light, and all the world around became "a gathered radiance—a shining peace under the night."

A. D. S.

CHIPPING SODBURY GRAMMAR SCHOOL.—At the prize-giving on May 30, the address to pupils was given by Mr. James Baker, who related a recent experience on an official visit to Denmark as a sample of what might be done in England by proper training for scientific farming. "I lately went over a farm in Denmark of 800 acres. The farmer spoke and wrote three languages. His house was a delight of pictures and flowers, and music was not forgotten. He gave lectures twice a week to the men and lads, and they had to write papers on those lectures. He was reclaiming some marshes on his lands, and besides his dairy cows and his arable land, he had to look after his pigs, for he sold 2,000 of these a year, and I went over what he called his 'pigs' palace.' All was clean and fresh, so that an hour spent in it was not unpleasant. You boys who are training to be farmers can laugh at the foolish people who tell you that any farming is dull and implies an uncultured life."

FROM RALPH, HOLLAND & CO.'S LIST.

Complete Catalogue and Detailed Prospectuses post free on application.

The Shining East.

- By EMILY M. BURKE, L.L.A., Hornsey County School. Crown 8vo. Cloth. 167 pp. Fully illustrated with Photographs and Maps. Price 1s.
- The first of a series of Class Books dealing with the civilizations of the past. It tells in simple language the story of Ancient Egypt, Babylon, Assyria, Media and Persia, Tyre and Sidon—in short, of all those ancient peoples first made known to us by our Bible reading.

English Composition. A Systematic Course for School Use.

- By HARRY PINE, with an Introduction by F. H. Hayward, D.Litt., M.A., B.Sc. In two parts for pupils' use, containing 80 and 76 pages respectively. Crown 8vo. Price 6d. each. Complete in one volume together with additional matter for the teacher. Crown 8vo. Cloth. Price 1s. 6d.

A Digest of British History.

- By S. H. McGRADY, B.A. With an Introduction by OSCAR BROWNING. Crown 8vo. Cloth. 320 pp. Price 2s. 6d.

Also published in three Parts as under:

- Part I.—B.C. to 1485. Part II.—1485 to 1789.
Part III.—1789 to 1912. Price 1s. each.

Inorganic Chemistry.

- By S. W. BURNELL, LL.B., and A. J. DICKS, B.A., B.Sc. Crown 8vo. 376 pp. Cloth. Price 3s. 6d.

Recent developments of the science are adequately treated, volumetric and gravimetric exercises are freely introduced, and many illustrative calculations are fully explained in the text. Questions and further exercises are appended to each chapter.

French Composition.

- By F. GUILLOTTE, Agrégé de l'Université, Licencié ès Lettres, Professeur au Lycée Charlemagne, Paris, and H. PROIX, Professeur à l'Ecole supérieure J. B. Say, Paris, Professeur d'Ecole normale. Comprising "The Grammar of French Composition" and "English Prose for Translation into French." With a Vocabulary. Crown 8vo. Cloth, 280 pp. Price 2s. 6d. net.

The book provides a carefully graduated course commencing with the grammar of French composition and finishing with suitable extracts from English authors.

Environment: A Natural Geography.

- By G. R. SWAINE, F.R.Met.S., Geography Master at the Manchester Warehousemen and Clerks' Schools. Crown 8vo. Cloth. 224 pp. Price 1s. 9d.

The primary aim is to show the intimate connexion between man and his geographical environment, and special attention is paid to the climatology, structure, and general physical condition of each region. The origin and development of towns are fully dealt with, and the influence of environment on plant and animal life is made a special feature.

Regional Geography of North America.

- By ELLIS W. HEATON, B.Sc. (Being Book III of "A Regional Geography of the Six Continents.") Crown 8vo. Cloth. 102 pp. With 25 Maps and Diagrams and 11 Photographic Plates. Price 1s.

Suitable for those taking **The Mississippi Basin**. Treated under Seven Sections as follows:—The Valley of the St. Lawrence and the Plateau of the Great Lakes, The Frozen North and the Dry Canadian Interior, The Rocky Mountain Cordillera and the Pacific Seaboard of Canada, the Atlantic Seaboard of the United States (with two subdivisions), **The Basin of the Mississippi**—The Interior of the United States (with four subdivisions), The Rocky Mountain Table-lands and the Valleys of the Pacific Seaboard (with three subdivisions), The Republics of Central America and the West Indian Archipelago (with five subdivisions).

Regional Geography of Asia.

- By ELLIS W. HEATON, B.Sc.

Crown 8vo. Cloth. 94 pp. 21 Maps and Diagrams, and 6 Photographic Plates. Treated under Eight Sections as follows:—**Northern Asia**, **Western Asia** (with four subdivisions), **The Monsoon Lands of the Indian Ocean** (with four subdivisions), **The Indo-Chinese Peninsula**, **The East Indian Archipelago**, **The Valleys and Lowlands of China**, **The Mountainous Asiatic Interior**, **The Japanese Empire**. Price 9d.

Regional Geography of Europe.

- By ELLIS W. HEATON, B.Sc.

Crown 8vo. Cloth. 135 pp. 45 Maps and Diagrams. Suitable for those taking **CENTRAL EUROPE**. Treated under Ten Sections as follows:—**Arctic Europe**, **The Colder Atlantic Border**, **The Baltic Basin**, **The North Sea**, **The British Archipelago**, **The Warmer Atlantic Border**, **Switzerland and the Alps**, **The Mediterranean**, **Danubian Countries**, **The Great Plains of Russia**. Price 1s.

Two New Books by Professor WALTER RIPPMMANN, M.A.**FIRST STEPS IN FRENCH.** Crown 8vo. Cloth. 2s.

An alternative to "Dent's First French Book," containing many new and improved features, and based upon **FOUR NEW WALL PICTURES** (price 4s. net). The first part of the book is also issued separately in **PHONETIC TRANSCRIPTION** (price 6d. net) and a *Teachers' Handbook*, **THE EARLY TEACHING OF FRENCH**, is also published (price 1s. 6d. net).

FURTHER STEPS IN FRENCH. Crown 8vo. Cloth. 2s.

This book completes the two years' course, of which "First Steps in French," was the first part, and which lays a sure foundation in Vocabulary and Grammar. Both volumes have been illustrated by Mr. FRED TAYLOR.

DENT'S NEW BOOKS

A FRENCH NOTEBOOK. By C. E.

HODGES, M.A. Fcap. 4to. 1s. 9d.

A skeleton notebook designed for a four years' course, and specially arranged for use in connexion with Berthon's "Première Grammaire Française." All the necessary and difficult points of accidence and syntax are clearly and amply provided for; examples are given in each case, and space is left for the pupil to write down similar ones occurring in his own experience.

PREMIÈRE GRAMMAIRE FRANÇAISE. By H. E. BERTHON, M.A., Taylorian

Lecturer in French in the University of Oxford. Fcap. 8vo. Cloth. 2s.

FIRST EXERCISES IN FRENCH GRAMMAR.**FURTHER EXERCISES IN FRENCH GRAMMAR.**

By Miss F. M. S. BATCHELOR. Each 1s. 4d.

FRENCH SONGS. Compiled by VIOLET PARTINGTON. Crown 8vo. 6d. net.

The collection contains a number of French songs, attractive and not hackneyed, with airs and Tonic Sol-Fa, the text being given in both the ordinary spelling and phonetic transcription.

DENT'S FIRST SPANISH BOOK. By F. R. ROBERT. With Illustrations by J. A. SYMINGTON.

Extra fcap. 8vo. Pp. vii + 184. Price 2s. net.

This book is exceptionally well written, and forms a most interesting introduction to the study of Spanish.

Three New Books by **Dr. RICHARD WILSON**, Editor of "Laureata," "In Golden Realms," &c.

Each Book 256 pages, Crown 8vo, 1s. 6d., and containing Eight Coloured Illustrations.

CORONATA.**A Book of Poems in Rhyme and Rhythm.**

A selection of Poems and Rhythmical Prose Passages from Shakespeare to the present day. Arranged in chronological order. May be used as a companion to a first course in English poetical literature.

STORYTELLERS' HALL**A Reading Book for Junior Forms.**

A varied collection of narrative material of an imaginative character which can be used to form an introduction to literature. The stories are drawn from all countries, and include much fresh material from Russian and Hindu literature.

TREASURE TROVE.**A Reading Book for Middle Forms.**

Introduces the pupil to a number of books which might be passed over as "too schooly" if the searcher for literary treasure were left to himself. It is hoped that the passages selected will create a strong desire to read the books from which they are taken.

Great care has been taken with the external production of these volumes, with the result that none of the books has any suggestion of school about it.

COMPOSITION THROUGH READING. INTRODUCTORY COURSE. By F. PICKLES,

M.A., Head Master of St. George's Secondary School, Bristol. Crown 8vo. Cloth. 1s. 3d. net.

The success which has attended the publication of "Composition Through Reading," Books I and II, has encouraged both publishers and author to issue another volume on similar lines for Junior Forms. Like its predecessors, it is first of all a Reading Book, and contains a series of literary masterpieces, many of which are copyright, classified and graduated with great care. In addition, the pupil is taught the difficult art of writing by the close study and imitation of good literature.

Previously issued.

Book I. Crown 8vo. Cloth. 256 pp. 1s. 4d. net.

Book II. Crown 8vo. Cloth. 368 pp. 1s. 9d. net.

THE OLD TESTAMENT FOR SCHOOLS. By Canon MORLEY STEVENSON, M.A.,

Principal of Warrington Training College, and C. W. BAILEY, M.A., Head Master of the Holt Secondary School, Liverpool. 544 pages. Crown 8vo. 2s. 6d.

Contains the Bible narrative in historical sequence, from which has been removed all incidents and terms unsuitable for children's reading.

A STUDENT'S HEAT. By IVOR B. HART, B.Sc., F.R.A.S. Crown 8vo. 4s. 6d.

This book presents as much as is possible of the subject without the use of higher mathematics. The ground covered is approximately that required for the Pass Degree Examination of most of the Universities. A large number of examples and illustrations are included.

ELEMENTARY EXPERIMENTAL STATICS. By IVOR B. HART, B.Sc., F.R.A.S.

Crown 8vo. 2s. 6d.

A work for beginners in which the subject is presented from a purely experimental standpoint. Contains forty experiments with full laboratory instructions, accompanied by theoretical explanations.

A TWENTIETH CENTURY ARITHMETIC. By C. S. JACKSON, M.A., F. J. W. WHIPPLE, M.A., and LUCY ROBERTS. Without Answers, 3s. 6d. With Answers, 4s. 6d. Also published in three parts, 1s. 6d. each.

This book contains a complete course of Arithmetic, and the attention of teachers is directed to the following points: 1. The large type employed. 2. The omission of obsolete topics and ineffective methods. 3. The full explanation of difficulties, in the hope of encouraging pupils to acquire the art of using a textbook. 4. Indication from the outset of the importance of compliance with the rules of computation.

J. M. DENT & SONS, Ltd., BEDFORD STREET, LONDON, W.C.

CORRESPONDENCE.

"WOMEN AND BRIBERY."

To the Editor of The Journal of Education.

SIR,—In your kindly notice of my pamphlet on the above subject, you ask: "Why should not some of its officials be women, as a practical acknowledgment that women ought to have honour and responsibility thrust on them as well as duties and suggested punishments?" In reply, I would say the sole reason—due to no "constitutional defect" of the Bribery and Secret Commission Prevention League—is that this body, which is incorporated, receives so little support from women. The League has, as a matter of fact, only three women members, but a seat on the Council was offered to one of these and declined for personal reasons. Illness must be my excuse for not writing last month.—Yours faithfully,

THE SECRETARY OF THE LEAGUE.

9 Queen Street Place, London, E.C.,

April 28, 1916.

LADY HARVESTERS.

To the Editor of The Journal of Education.

DEAR SIR,—Would you be kind enough to mention in your journal that the Women's Defence Relief Corps are sending parties of educated women to help with harvest and other land work during the summer holidays. They would be better in health if they would rally to the work and would be doing a most patriotic work. We are prepared to register and find employment

for as large a number as we can get. Many colleges are enrolling with us, but many more are wanted, and we really understand the work, for we undertook it through the hay and corn harvest of last year. Thanking you in anticipation,—Yours faithfully,

C. A. DAWSON SCOTT.

38 Barrow Hill Road,
St. John's Wood, London, N.W.

THE HEAD TEACHERS' CONFERENCE AT NOTTINGHAM.—While, in the words of the President of the Conference—Mr. H. R. Barge, of London—teachers may support the temporary withdrawal of school prizes, there was a unanimous feeling that it would be a suicidal policy "to withhold the prizes of life." In moving a strong resolution of protest against any proposals to impair the efficiency of education, the Vice-President, Mr. Morrell, pointed out that Germany was relaxing no jot of her expenditure upon schools, while France has actually increased her school expenditure. Quoting Mr. Asquith's words, "We shall have to refashion the whole fabric of the Empire," he showed how short-sighted school economies might give the victory in the industrial war to the enemy, who was preparing for the commercial struggle with characteristic forethought. Local Education Authorities were urged to maintain the number of scholarships awarded to pupils in pre-War days, to make no increase in the size of classes, to insist on the employment of fully qualified teachers, and to retain in their schools all men teachers rejected for active service. Unanimous condemnation was expressed of attempts to curtail the school-leaving age in various districts, mainly agricultural. It was pointed out that there are still many qualified ex-teachers who might be recalled to service in the schools. The curtailment of the School Medical Services and the feeding of necessitous children was also strongly opposed. Resolutions in favour of Technical and Science Schools, of Continuation Classes, attendance at which should be compulsory, were also carried.

WOODBROOKE SUMMER SCHOOL.—We have been asked to supplement the advertisement of the meeting that appeared in June by the statement that the fee of 35s. includes board and lodging. Mr. Roper Fry will take the place as Lecturer of Prof. Gilbert Murray, who has since undertaken to lecture in Columbia College, U.S.

A Forgotten Chapter in The History of Education.

BY

J. S. THORNTON.

LONDON

FRANCIS HODGSON, 89 FARRINGDON STREET, E.C.

1916.

SIXPENCE NET.

Vice-Chancellor M. E. SADLER:—"Your paper, with its close grasp of history and principle, has interested me very much. The old era has come to an end. What next? Your solution, or Germany's? . . ."

Dr. OTTO ANDERSEN, Professor of Education in the University of Christiania:—"Many thanks for your paper, interesting and excellently written. I see you are indefatigable in your struggle for organized liberty in English school-system."

Secondary Education:—"The part of the pamphlet which deals with the educational systems of Norway and Sweden is a particularly opportune contribution to educational literature."

DUSTLESS and HYGIENIC SCHOOLS

On all School, Laboratory, Library, &c., Floors and Linoleums of every description

USE FLORIGENE (Regd.)

Very EARLY in the SUMMER VACATION for Best Results.

It is **IMPORTANT** to **NOTE** that **ONE APPLICATION** of "Florigene" ALLAYS the DUST and DIRT for **2 TO 12 MONTHS**, according to traffic, not only during each Sweeping (without sprinkling of any kind) but also throughout all the intervening periods—which is of greater hygienic importance. "Florigene" also saves time and labour, and is easily applied.

These sanitary, labour-saving, and economic advantages are **NOT** attained by sweeping-powders or any mechanical or other method.

LONDON:

WILLIAM RICE, JUNIOR, 3 BROADWAY, LUDGATE HILL, E.C.

EDUCATION AND REALITY.

IT is a little discouraging sometimes to be aware that, in the middle of this upheaval of the world around us, all that is worst in education is going on quite unaltered. People talk of great changes that are coming after the War, but it is difficult to believe in them when everything continues as before, only rather less efficiently because of the withdrawal of so many young men from among the teachers, and those very often the more efficient members of the staffs. If, however, the public press can be regarded as really representative, or at any rate symptomatic, of the public mind, there are signs of a more than usually persistent discontent with the education of to-day, and, above all, with a public-school education. There was "Old Etonian" writing in the *Times* to demand at the same time the reduction of expense in such eminent schools as that from which he came forth (it would be begging the question to say that it educated him), and a training for the present generation of boys "to fit them for some definite sphere of activity in the near future." There was the writer in the *Pall Mall Gazette*, who headed his article, "The Public Schools—Intellectual Charnel-houses," but, while giving a tolerably accurate description of the intellectual conditions to be found there, confessed himself unable to suggest any solution of this problem of mental sanitation. Lastly, there was the extremely important article of Mr. J. S. Norman in the *National Review* for February. All these writers agree in denouncing the consummate uselessness of education of the public-school type on the intellectual side. Nor is it so much the old conflict between utility, in the commercial and materialistic sense, and spirituality, or learning for its own sake, which used to divide the newspaper controversialists. The complaint is not so much that the public schools produce nothing commercially useful, but that they produce nothing of any intellectual value at all. The fault with

them is not that their studies have not enough relation to material realities, but that they have little relation to life itself, and above all the modern life of every day. What we have to aim at, if we are ever to make any progress with this all-important problem of the reform of education, is simply reality. And what we have mainly to get rid of is the cant of what is called "mental gymnastic."

In the prospectus of a famous school may be found the following extract from the head master's report:—"We do not find middle-aged and elderly gentlemen doing free gymnastics, or 'benders and stretchers,' or 'knees up' in their homes or in the streets, but we do not for that reason omit gymnastics from the curriculum. Now Latin is one of the best forms of mental gymnastics, though it is much more than that." But we do see some of them, perhaps the writer means, walking erect and briskly, others slouching and shuffling. And often their manner of walking is to be traced to their having or not having been systematically trained in the proper use of their limbs. Now we are always told by the exponents of the modern form of drill of the Swedish type of gymnastics that it is superior to the older or dumb-bell type, because it aims, not at developing muscular power generally, but at exercising the limbs with a view to the particular sort of action which it must practise in ordinary life. Dumb-bells and "Whiteley exerciser" may enlarge the muscles of arm and leg, but they will not enable us to walk well, as "knees up" will.

In precisely the same way, the study of Latin may develop and exercise our powers of expression, taste, and understanding in literature, but it is extremely doubtful if, regarded as a "mental gymnastic," it is "much more than that," we are at once led to ask the very pertinent question, For how many who attempt to learn it does Latin become "much more than that"? The point is an old one, and open to much argument; but it is noteworthy that the head master advances it as an example of the blindness of parents to "educational science." Is it certain that the educational science of the parent is on this occasion so much less sound than that of the head master? What the parent wants is that his son's education should directly prepare him for the calling he is to pursue. This view is no doubt insufficient in so far as it ignores two of the three main objects of education—training for citizenship and for the right use of leisure. But it is right in so far as it claims that education should bear directly on real life.

The unreality of much of the present "mental gymnastic" is sometimes illustrated in curious ways. A boy of ordinary common sense will be at a loss for the meaning of the Latin word for "shore" in such a phrase as "he leapt from the ship on to the shore." You remind him of the circumstances and the drift of the passage, and ask him on to what he was likely to leap. If it were an ordinary English story that you were reading to him, he would not hesitate for a moment. But, no. *Litus* is a word with a dictionary meaning, and he has forgotten, if he ever knew, that meaning. A Latin author is simply a collection of words with dictionary meanings. Therefore he cannot possibly know that word—such instances would be incredible if they were not true. Of course, it is no doubt the method scarcely less than the subject which is at fault. Latin is commonly taught in a wholly unreal way. And, as Mr. Norman has pointed out, the linguistic difficulties of Latin are such that it almost inevitably becomes a complicated puzzle of words to the ordinary boy. The direct method in Latin might (or might not) save the situation. But the experiment has come too late. The need for reality is urgent, and how many of our present teachers of Latin could at a moment's notice take to the direct method and apply it satisfactorily?

But it is not only a question of Latin. What of mathematics, commonly supposed to be a training in the art of

pure reason? Is it certain that it is worth while for children, who are never likely to touch a ledger, to be plagued with Practice sums, or for the "classic" to pursue the elusive x through so many mazes, though he will never proceed to astronomy or even to trigonometry? Equations are things not only to be solved, but to be used. A Professor of Political Economy once remarked that every boy might reasonably be expected to know the calculus sufficiently to follow it when it was worked in an example. It was not even necessary, he thought, that his pupils should be able to work it much for themselves. It was not for the gymnastic of the thing, but for its actual use in economics, that he deplored the failure of so many boys, who spend long hours over "mathematics," to get so far. Again, might it not have been more worth our while, even if we were not going to be scientists, to understand some of the more important of scientific laws or theories—the circulation of the blood, the conservation of energy, the atomic theory, or natural selection, than to be introduced to logarithms and drop them when they had led us nowhere?

The truth is that every sort of study which can possibly be shaped into a school "subject" and fitted into a time-table has its own gymnastic. Most educational authorities would hesitate to advertise a curriculum whose central subject was Music. It would suggest dilettantism. Yet what severer discipline could be devised than harmony and counterpoint? It is just as difficult to learn to avoid consecutive fifths as to avoid a false sequence of tenses. There are two reasons why the classics have found such favour with the teaching profession. One is a good reason rarely supplied. For those who succeed in learning Latin or Greek, the study of the language is peculiarly rich and rewarding, with many ramifications into all sorts of spheres of reality. But then, in the first instance, it is necessary to succeed. The other reason is a bad one. It is so easy to grind those subjects in class without taking the trouble to think out a method. Grammar repetition and construing are easy for the master to turn into a groove—fatally easy. And the same holds true, in different degrees, of most of the subjects which are recommended "as a discipline." But boys (and probably girls) are not easily deceived. If certain studies are forced on them for the sake of plaguing them, they soon know it, and the result is that their whole attitude towards work becomes distorted. So does that of their teachers. The object of the taught will be to shirk with impunity; that of the teachers to prevent them from doing so. And that, for all that may be said to the contrary by (*soi-disant*) reforming head masters, is still only too commonly the condition of work at the public schools.

Now if it is true that every subject is capable of being treated educationally, and will contain a sufficient gymnastic in itself, it is plain that we shall naturally select for a boy those subjects for which he shows most capacity, and those which bear most directly on what he is likely to do in life (including the occupation of his leisure hours). Ideally those two tests should be identical, but, in actual experience, owing to our wilful habit of fitting round people into square holes, they do not always coincide. A further difficulty, no doubt, arises from the fact that the points at which boys decide, or it is decided for them, "what they are to be"—which, unfortunately, means not so much even as what they are to do: only how they are to earn their living—are very variable. But we might at least go so far as to lay down the rule that, if a boy seems likely to go into commerce, he shall definitely be taught a good deal about the nature of commerce—not merely substitute German for Greek, and call it a "modern education." And to know about the nature of commerce does not mean learning shorthand and double entry; it means knowing something about economic history and a little about its theory. It means knowing commercial geography, not merely what nations exchange what articles, but why they do so, and what effect it has on their finance. It means knowing that a bank is something more than a place where they keep strong boxes, clerks sit at high desks, and people cash cheques. And none of these

things can be learned really thoroughly without an education of quite high value, and by no means wholly materialistic and "utilitarian." It is far more part of "what every educated man must know" than are the principal parts of *vinco* or the *pons asinorum*. Even if a boy, who had gone through such a course (which would only be one among the courses he had taken) did not proceed to a commercial calling, it would probably have more value than the ordinary classical or modern-side course has for the ordinary un-literary boy. It would, for example, help to make plain to him some puzzling political problems. He might know why imports must pay for exports, or what it means to say that the Mark is now declining in value, and he would be a better citizen accordingly. And this is only by way of example. Everything must bear directly on reality. If we teach poetry, let it bear on real emotions; if divinity, let it not be a repetition of unintelligible formulæ and catechisms, but deal with real religion, and that of to-day; if mechanics, let those who learn it also construct engines and aeroplanes. The education that we must look for in the future is not "real" in the German sense, confined to material objects, but real in the English and largest and quite ordinary sense of the term—a sense which we shall not altogether misinterpret if we say that it means "to do with life."

LIT. HUM.

CLASSICS v. SCIENCE.

By H. J. CHAYTOR.

THE discussion of this case, which was begun by the Burlington House Conference of May 3, and has since been continued by manifestos and letters in the columns of the *Times*, does not seem likely to reach an immediate conclusion. The importance of it has, however, been impressed upon the public by practical experience of war. The sad cases of dyes, drugs, optical glass and other necessary commodities for the supply of which we were almost entirely dependent upon Germany, apart from the high perfection and unlimited supply of German munitions of war, have been thought to show that English scientific attainments are inferior to those of Germany. The schoolmaster is usually blamed for everything that goes wrong within the social organism and is very rarely praised for anything that goes right; the natural conclusion is that science has not been adequately or efficiently taught in our schools. It is unfortunate that of the many eminent speakers at the Burlington House Conference comparatively few were schoolmasters or experienced in English and German methods of education. They might otherwise have realized the fact that the amount of time devoted to science in English and German schools of the same type does not greatly differ and that the teaching is at a high level of efficiency in both. Some speakers appeared to judge the great body of English secondary schools by their reminiscences of the curriculum which they endured at one of the so-called public schools, but, even in the case of these ancient foundations, their recollections are often hopelessly out of date. They were apparently quite ignorant of the fact that the energy of Local Education Authorities and the regulations of the Board of Education have produced a very large number of secondary day schools throughout the country in which the fullest importance is given to the teaching of science. These opportunities are, moreover, readily grasped. The elementary-school boy who works his way to these schools takes far more easily to scientific than to literary subjects. When he reaches the stage at which he is called upon to show some literary taste and feeling for language, he is often unable to advance beyond a certain point which is well below that of University scholarship standard. To hear one's native language persistently misused from childhood is not the best preparation for appreciating word-values and shades of meaning in another tongue. Hence municipal secondary schools turn out a considerable number of boys who have specialized to some extent in science. The proposal that

the Universities and the Civil Service Commissioners should give science and literary subjects at least an equal chance is a step in the right direction, and will be certainly welcomed by every school that is obliged to keep these examinations in view. Nine out of every ten elementary-school boys want to be "something in the Civil Service," as they express their ambition; all they usually know about the Civil Service is that the successful candidate sits on an office stool until he has worn through the seat and then draws a pension for the rest of his life, and there seems no reason why the possibilities of so placid a career should be confined to classical scholars.

The reason, however, for the inferiority of British as compared with German science is not to be found in the schools of the country, nor will the alteration of examination syllabuses prove to be more than a tinkering with the problem. An entire change is required in the attitude of the public towards science in particular and learning and research in general. More science is being taught and better taught in England than ever before in the whole history of the country. But what are the prospects open to a man who has obtained even a high degree in science at Oxford or Cambridge? Nobody in England ever made a living by research work. He can certainly enter the teaching profession—that is, for the salary of a head gamekeeper or a South Wales coal miner, he may devote the best years of his life to training immature minds until his own originality and interest have disappeared, when he may retire on a pension of nothing a year. If he is fortunate, he may get an opportunity of doing research work for a manufacturing firm; and if he is very fortunate he may gain a permanent position instead of being "fired," when the firm considers that his brains have been sucked dry. But such posts are not common: the average manufacturer would as soon think of keeping a tame elephant on the premises as a tame chemist. He would probably prefer the elephant, as the animal's trunk could at least be harnessed to a crank, whereas the chemist represents a dead loss, if he does not happen to make some useful discovery. The manufacturer does not care to gamble on the chance of discoveries made in this way; he prefers payment by results. He will buy the discoveries when they are made or pay someone else a royalty for the use of them; meanwhile what was good enough for his fathers will do for him, and he prefers a safe, conservative business.

This attitude is unfortunately typical. The parent who is anxious that his son shall learn only subjects that will be "useful," which adjective means that they shall have a definite cash value when "schooling" is over, is a painfully common acquaintance of every schoolmaster. We do not, as a nation, value knowledge for its own sake. Germany does—or did. The Englishman who devotes his spare time to research in some apparently useless branch of knowledge is regarded by his neighbours in the same estimation as the collector of postage stamps or snuff-boxes. In Germany he is respected as a savant. It has been truly said that, while much excellent work has been done in art and literature for the direct purpose of pecuniary reward, no great or epoch-making work was ever produced from such a motive. Similarly, the love of knowledge must precede real scientific eminence. The love exists; many a man has done valuable research work after spending the best hours of his day in the drudgery necessary to earn his bread; but a nation which valued knowledge for its own sake would have made his life easier and his progress the more rapid.

The advice, therefore, to become a scientific nation because science pays rather resembles the advice given to a bashful young man: "Adopt a pleasing and agreeable demeanour, especially in the presence of ladies." The chief hope of change resides in education conducted not primarily with a view to success in examinations. Such education, moreover, whatever stress be laid upon natural science, must not venture to neglect the humanities. A discoverer is helped quite as much by his imagination as by his stores of accumulated knowledge and any system of education which starves imaginative power will doom science to complete sterility.

THE PREFECT SYSTEM IN A GIRLS' ELEMENTARY SCHOOL.

THE prefect system has long been a familiar feature of the great public schools, and most secondary schools have adopted it in some form or other, but in elementary schools it is still uncommon. It may be of interest therefore to describe the prefect system as introduced into a girls' elementary school, and the way in which it developed itself in the course of some six or seven years. The words "developed itself" are used advisedly, for it began very tentatively, and certain later developments were due to a spontaneous growth and not to any preconceived plan. Imagine, then, a school of medium size, old-fashioned in some respects, tone and traditions good, buildings fairly good, but presenting certain drawbacks in regard to playground, cloakrooms, and staircase. The children were very "mixed," the types ranging from a rough and rather "difficult" coster class up to the children of comparatively well-to-do trades-people, with all the intermediate stages and conditions. Their intellectual capacities also varied widely, from the almost, if not quite, deficient (or, as one head mistress mercifully describes them, the "non-intellectuals") to the exceptionally clever children, a few of whom gained scholarships to secondary schools from time to time. Exigencies of accommodation and staffing necessitated a rather unusually large top class, and in it were a goodly number of elder girls, including several over fourteen. Arrived a new head mistress, an event unknown in the school for something like twenty years—a strange event, undreamed of in the philosophies of even the most experienced of the girls, and eminently unsettling and exciting.

Now the head mistress who is worth her salt knows that on the elder girls of the school much depends, and it is with them that her best and most lasting work is done. The training in school during the years from thirteen to fifteen does more for a girl's character than that of any other period, and, moreover, these are the girls who set the type for the school. But somehow there was not the right spirit in these particular girls at the moment, and they were in danger of losing the position they had held in the school and of exercising an influence not entirely for good. It was decided, therefore, to introduce the prefect system, in the hope of improving matters. Certain older girls were made prefects, their selection being in the hands of the head mistress. Two conditions were laid down—they must be steady, trustworthy girls, and they must be over thirteen. They need not necessarily be in the top class, though in practice this was generally the case owing to their age. The number varied from time to time from perhaps four to ten, but was usually about six or eight. As fresh girls qualified they were added to the numbers a few at a time, and they remained prefects till they left school, so that a constant tradition was formed and handed on. Badges were obtained bearing the school emblem, and were worn with pride. One of the prefects was appointed head prefect. In the first instance she was chosen by the head mistress, but, after the system became established, the whole school voted as to which of the existing prefects should be appointed, and the head mistress, whilst reserving the right to a final decision, very rarely had to exercise it in a direction contrary to the school vote.

Prefects having been appointed, certain duties were assigned to them, others being added from time to time as occasion suggested. At the same time certain small privileges were allowed, but it was made clear from the first that the responsibilities were essential to the estate of "Prefect" whilst the privileges were only incidental.

It may be interesting to mention some of the "duties" performed, and here it may be remarked that the girls drew up for themselves a rota by which the work was shared amongst them, and that, by their own arrangement, they usually worked in pairs. They kept order on the stairs and in the cloakrooms, helped the little ones to find lost hats,

collected the registers after they had been marked, taking the numbers, checked rough play in the playground when it caused risk to the smaller children, settled disputes amongst the little ones, and regulated the traffic to and from the wash-hand basins and drinking water during playtime. In winter they saw that the lights were turned on in the cloakrooms when required, and after school they hustled out the laggards, locked the playground gate, and gave the key to the teacher responsible for the day. It will be noticed that by this means the teachers were saved from a good many tiresome little jobs, and a good deal of unnecessary friction. A little good-natured scolding or chaff from a prefect would often save the need of reproof from a teacher, and school-girls, like schoolboys, have methods of dealing with one another which are all their own, though the type of dealing differs with the sexes.

Needless to say, the prefects could not impose any punishment, though they could, if they found it necessary, send a girl to report herself to the head mistress. They were strongly discouraged from telling tales, and, as a rule, if offences were reported, the names of offenders were not mentioned, so that any remarks which a teacher had to make in consequence of a prefect's report, were addressed to a class or group of children, not to individuals. At the same time it was understood that, in really serious matters, it would be the duty of the head prefect to report to the head mistress, and an instance could be given of very serious evil being stopped by this means.

Prefects' meetings were held from time to time as required, and at them the prefects discussed their difficulties, apportioned their duties, and generally settled "the affairs of the nation" from the prefect standpoint. If they wanted any help or advice from the head mistress, or if she had anything to say to them, she was present during a part of their meeting, but not otherwise.

It may sound as if the prefects had rather a dull time, and, indeed, their work was at times arduous, but there was no doubt that the office was highly prized, and the lesson was soon learned and accepted that you cannot enjoy power without corresponding responsibilities. Moreover, there were some privileges, as has already been mentioned. These, indeed, are somewhat difficult to define, but perhaps that most appreciated by the girls themselves was the attitude of mutual sympathy and co-operation which sprang up between them and the staff, together with the respect and affection with which they came to be regarded by the younger girls. One particular privilege may be mentioned. At the annual social gathering of the Old Girls' Association, prefects, though still at school, were allowed to be present. Even here they thoroughly earned the privilege, for they helped with the refreshments and enjoyed themselves none the less in consequence.

But what about the effect on the girls themselves? Indeed, the result was almost beyond the most sanguine expectations. In place of a band of somewhat discontented young misses several sizes too big for their boots, and looking forward with impatience to emancipation from school, there appeared a body of serious, busy, cheerful girls, with plenty of interest in school, anxious to remain there as long as possible, and thoroughly enjoying their life.

It was a prefect of fourteen who was overheard remarking emphatically to another prefect, "I do *hate* holidays." Moreover, it developed a surprising efficiency and power of leadership. In a case of emergency, when a teacher was ill, two prefects (it has already been mentioned that they preferred to hunt in couples) could safely be set to take a reading lesson, say with a large Standard III, or if it was necessary to leave a young class to study alone it was sufficient that a prefect took her work into the room and sat at the teacher's table, and law and order prevailed. In any sudden emergency there was always at hand a body of responsible people ready to be called upon. At the same time, care was exercised that plenty of little jobs remained for the non-prefects to do, for dear to the heart of the child is the voluntary job.

But the most delightful development of all has yet to be told, and this is where features appeared which were entirely unexpected. It has already been hinted that the playground was not ideal. Perhaps for this reason there were a rather unusually large number of those trifling accidents which are bound to occur where a large number of children play heartily together. Knees are grazed and elbows scratched in the best regulated schools, and a judicious amount of comforting and tying up has to be administered. This business was entirely taken over by the prefects, though, of course, any serious matter was still dealt with by a teacher. A bleeding nose, however, a grazed knee, or a muddled pinafore are not usually very serious matters except to the owner, and the prefects were quite ready to deal with the situation. On one occasion two prefects, who came into class some five minutes late after playtime, were greeted with a look of surprised reproach, but the explanation was forthcoming with perfect assurance: "One of the little ones fell down, and we had to see to her." Of course they had to; there was no more to be said. She had been duly sponged down, tidied, and comforted, and then returned to her class, doubtless with a word of explanation to the teacher to account for her lateness. No wonder the little ones came to regard the prefects as a species of little mothers.

As time went on, it was found that a supply of clean rags, a bandage or two, and scissors specially kept for the purpose, were desirable. Moreover, the prefects were spoiling for some fun. So it was decided to give an entertainment to the school and spend the proceeds on what was required. Supplementary dramatic talent was enlisted from a few non-prefects, and several recitations and sketches were prepared. Weeks full of mysterious whisperings and very private rehearsals followed. The program was submitted to the head mistress for approval and a little dramatic criticism, and help was invited from a member of the staff specially gifted in such matters, but otherwise the affair was managed entirely by the girls. They put up notices of the event, prepared tickets, sold them at a penny each (three in the same family for twopence halfpenny, babies in arms free, teachers threepence!), arranged for the seating, cajoled the caretaker into putting up a platform, and really showed considerable organizing power. It is true that in some respects the performance was very amateur, but what mattered? Only the school was present—no outsiders—and the audience was very well pleased and applauded enthusiastically. The proceeds provided not only bandages, scissors, a little permanganate of potash (at before-the-War prices, be it said), a sponge, and small bowl, but also a cabinet to hold them, whilst a small fund was kept in reserve to replenish the stores when necessary. In fact, nowadays it is quite interesting to fall down and hurt yourself, and be in need of first aid. Doubtless, in time other developments may appear, but, at any rate, each succeeding generation of prefects will find plenty to do and will, moreover, find happiness in doing it.

The writer knows of several elementary schools where the prefect system exists (would there were more of them!), and in some of these it is found a better practice to have prefects drawn from each class. In this case there would be no age limit, and the appointment would be held temporarily—say for a month, a term, or a year. In some the prefects are elected by their classmates. Such considerations must depend a good deal on the conditions of the school, and to some extent on its aims. What suits one school, or suits it at one time, may not prove so satisfactory elsewhere or at another time, but the system in some form or other is undoubtedly of great value in any school, and more particularly in the Elementary School.

THE Council of College Hall (University of London) have appointed as Principal, in succession to Miss Hollings, Miss T. B. Alleyne, M.A., Warden of Langdale Hall, Manchester.

THE CONFERENCE OF HEAD MISTRESSES.

THE forty-second Annual Conference of the Incorporated Association of Head Mistresses took place on June 3 at Wycombe Abbey School, by invitation of the Governors and the Head Mistress, Miss Whitelaw.

The chair was taken by the President, Miss Escott (Sheffield High School), and some 220 members attended.

After a welcome by the hostess, the Master of the Temple (Dr. E. W. Barnes) addressed the meeting.

"Women's Education in Connexion with Some Problems which will arise after the War."

Speaking from experience, both as tutor and examiner, Dr. Barnes affirmed that women no longer needed to justify their claims to higher education, but he outlined certain changes, more especially in the system of examination, which would prove beneficial to the community. The time had arrived when the teaching profession should cease to absorb so large a percentage of educated women as in past years, and it was now incumbent on the head mistresses of the secondary schools of the country to determine in what professions women were most likely to succeed, and to modify the school curricula accordingly. It was the head mistresses' duty to insist that in general every girl of the middle classes should be trained for some definite occupation in life, as had always been the case with the girls of the lower classes. Hitherto the teaching profession had absorbed far too large a proportion of educated women, to whom many new spheres, both civic and professional, were now open. No woman should be debarred from any profession by reason of her sex; limitations of capacity and temperament should be the only barriers. He doubted, for instance, if women were likely, apart from their natural fitness (with regard to which he expressed no opinion) to be admitted to the regular ministry of the closely organized churches. But with regard to the Established Church itself there was real need for the development of a regular order of deaconesses. One such should be on the staff of every large urban parish. The War had shown that women could perform efficiently many of the duties formerly assigned by custom to men. In the future, in each urban community, the school attendance officer, the factory inspector, teachers of hygiene and cookery in the compulsory continuation schools, those supervising the dental and eyesight clinics, the milk depots, and such children's amusements as the cinema, might all be women attached to one central bureau, who should work in co-operation with the women teachers of the elementary schools, the parish deaconesses, and the doctors of the local hospital. The head of the bureau would of necessity be a well educated woman, who had studied the economics of industry and was capable of cogently and persuasively putting her views before the Local Municipal Authority. Only such an efficient bureaucracy, zealously and incessantly active in its duties, could protect women and young children from the ill effects of that industrial competition which in the future was likely to be even more fierce than in the past.

To the vocations of teacher, deaconess, and social worker, on which Dr. Barnes insisted as the three indispensable openings for women in the future, he added the professions of medicine and nursing, stating that no development of women's education was so urgently needed as in those directions. It would pay the State to subsidize the medical education of women by a liberal system of scholarships, and private benefactors could not do better than to lavish money with the object of reducing the necessarily heavy cost of training girls in medicine or surgery. Further, such work as scientific research in connexion with industry, and under the auspices of the great business firms, could be undertaken by able women who had had a University education in the physical sciences. At Cambridge, before the War, the University had contained eight times as many undergraduates as women students. For the sake of the country the numbers ought in the future to be equal, and in other places where other types of education were given the same truth held. Marriage should always be regarded as the natural consummation of a woman's life, and it was wicked to ignore its influence. Yet it was hardly less a mistake not to tell girls that a large proportion of them cannot hope to marry. One effect of the War would be to increase the disparity between the numbers of the two sexes.

In conclusion, Dr. Barnes spoke of the "appalling emptiness of the life of the unemployed, unmarried, middle-aged woman, who, by sheer force of circumstances, was a parasite on the community." If every woman in the community could be trained so that her faculties were sharpened and her sense of duty quickened to serve the State, "a social Utopia would be less remote than now from our present world."

After the transaction of formal business, the Chairman (Miss Escott) moved the adoption of the report and of the following resolutions:—

"(1) That any qualification accepted by the Board of Education for entrance to a training college should carry with it a certificate.

"(2) That the Board of Education be requested to recognize as qualified for admission to a training college: (a) Candidates who have obtained a School Certificate granted by the various Examination Boards which have accepted the principles of Circular 849; (b) candidates who have not obtained a School Certificate, but at one and the same examination have passed in English, History or Geography, Arithmetic, and two other subjects (of which History or Geography may be one)."

Miss Stoneham (Preston) moved, and Miss McCrea (Stafford) seconded:—

"That as an indispensable part of any real reform of the examination system as applied to secondary schools, University and other examining bodies be approached with a view to the equalization of their standards for passing examinations drawn on the lines of Circulars 849 and 933."

Admirable papers were read by Miss Berryman (Notting Hill) on "The necessity of including European History in the School Curriculum," and by Miss Kidd (Maidstone) on "The Supply of Secondary Teachers and the Attractiveness of the Teaching Profession." Miss Strudwick (City of London School for Girls), in a paper on "Education as a Preparation for Future Work," emphasized the need of general liberal education before any specialization was attempted.

In the discussion on War Openings, Miss Douglas gave an account of what she had effected at Salisbury in the employment of her girls for haymaking and harvest, both temporarily and for the duration of the War.

Miss Faithfull (Cheltenham) contended that women were better fitted and could be more profitably employed at school in preparation and training for clerical work.

A vote of thanks to the hostess and her staff, moved by Miss H. L. Powell (St. Mary's College) and seconded by Miss Woodall (Milton Mount College), concluded the proceedings.

Later on in the afternoon an "At Home" was given by Miss Whitelaw in the grounds of Wycombe Abbey, now entirely kept by the girls and staff, under the direction of a skilled lady gardener.

INDIA.

THE province of Bengal, now shorn of much of its old dignity, continues to attract notice by the vagaries of its administration. Nowhere is this more evident than in educational affairs. "Young Bengal" provides a problem which the Government has so far failed to solve, and recent events seem to indicate that a satisfactory solution is still remote. The glaring defects of Indian Education, which are mainly due to faults of statesmanship, are all most obvious in that province, where strong and enlightened action by the Government is urgently needed. And until such action is taken, the members of the Indian Educational Service must be content to serve according to official exigencies as the buttresses or the butts of the administration.

No class has exercised a more wholesome influence, or has shown more diligence and devotion in furthering the true imperial interests of India, than has the Indian Educational Service. Its members have performed their task for the most part without social recognition, without general sympathy or appreciation, and in the teeth of much official disparagement. From time to time attempts have been made to account for this lack of consideration. In a well known work, *Education and Statesmanship in India*, published in 1911, it was suggested that the Service "necessarily suffers by comparison with the Indian Civil Service, its members being drawn from the same social classes, and having approximately equal qualifications—unless it can be seriously maintained that there is specific virtue in one more competitive examination, and the finish imparted by the crammer's art." This acute and significant suggestion was made by Mr. H. R. James, Principal of the Presidency College, Calcutta, whose departmental

career has now become a matter of intense interest throughout the Indian educational world.

It will be recalled that in 1913 a new Director of Public Instruction for Bengal was imported from the Board of Education in spite of Mr. James's undeniable claims to that appointment. On that occasion reference was made to the mischievous effect on the native mind both of this high-handed procedure and of the specious pretexts by which it was supported. Since then, doubtless through a variety of concurrent conditions, a wave of disorderliness has swept over the Bengal colleges, and at the end of 1915 there was a general movement in favour of a strike among Calcutta students. The ferment seemed to subside, but early in 1916 a European professor of the Presidency College was knocked down and kicked by a gang of students who had assembled for the purpose. A lock-out was ordered by the Government, and a committee of inquiry appointed. Mr. James had acted with firmness in fining the strikers, but he was nevertheless suspended for having, it was alleged, insulted the member in charge of education at an interview in which he had taken reasonable exception to the composition of the committee. Mr. James was afterwards transferred to another appointment, and has now gone on leave preparatory to retirement. The subsequent report of the committee has completely exonerated Mr. James and has condemned the students in the severest terms. Meantime, the offenders go unscathed, and no adequate investigation or punishment is now possible. The prestige of the educational service, previously inconsiderable in Bengal, has been rudely shaken; but the majesty, if not the dignity, of the executive has been maintained. The final issue of this sorry business has still to appear. We fear it may prove of the gravest character.

JOTTINGS.

THE third Conference on "New Ideals in Education" will take place at Oxford from July 29 to August 5. The program includes papers on "The Religious Basis of Education"; on "The Place of Science in Education," by Sir Henry Miers; on "The Boy Scout Movement," by Sir Robert Baden-Powell; on "Universities and their Re-planning," by Prof. Geddes; on "Regional Studies and Human Surveys," by Prof. Fleure; on "Workmanship and Education," by Mr. Henry Wilson; on "Open Air Schools," by Dr. Crowley; on "The Examiner Examined," by Mr. John Russell; and others. Among the chairmen are the Earl of Lytton, Lord Sydenham, Sir William Mather, and the Provost of Oriel, the Master of University. By kind permission of the Master and Fellows, the meetings will be held in University College Hall, at 10.30 a.m. and 6 p.m. daily. Lady Margaret Hall and St. Hilda's Hall are already reserved for members of the Conference. St. Mary's Hall has been taken for forty-nine more members. All information can be obtained from the Secretary, 24 Royal Avenue, Chelsea, S.W.

SUMMER SCHOOL OF FRENCH.—At the request of the Board of Education a Summer School of French is being organized at Bedford College for Women, from August 29 to September 12. The course will comprise lectures by eminent French men and women, on "Literature," "Present-day Social Conditions," "Linguistics," and "Methods of Teaching Abroad and at Home." Ample opportunities will be given for the practice of conversation and phonetics. The full course is intended for teachers only. For further particulars apply to Miss Batchelor, Bedford College, Regent's Park, N.W.

ROLL OF HONOUR.—Lieutenant R. C. A. Gow, H.M.S. *Defence*, youngest son of the Head Master of Westminster School; Lieutenant C. D. Fisher, R.N.V.R., H.M.S. *Invincible*, an Oxford tutor and brother of the Vice-Chancellor of Sheffield University, were lost in the naval battle off Jutland. Captain C. F. Ellerton, Cheshire Regiment, Assistant Master successively at Liverpool College, Eastbourne College, and Radley College; Trooper Maurice White, South African Horse, formerly Assistant Master at King William's College, Isle of Man, and afterwards Inspector of Education in South Africa; Second Lieutenant H. J. Thorns, Berkshire Regiment, Music Master at Tettenhall College, have been killed.

Lieutenant A. P. Selwyn, Royal Flying Corps, son of the Rev. E. C. Selwyn, formerly Head Master of Uppingham, was killed while flying on May 18. Captain Leslie Woodroffe, Rifle Brigade, who died of wounds received on June 1, was one of three brothers who have been killed in the War. They were all educated at Marlborough College, and were all Head of the School before leaving. Captain Leslie Woodroffe gained a Classical Scholarship at University College, Oxford, where he took a first class in Moderations and a second in Lit. Hum. He was an assistant master at Shrewsbury School until the outbreak of the War. He was given a captain's commission in the Rifle Brigade at Christmas, 1914, and proceeded to the front with his battalion in the following May. He was severely wounded at Hooge in the following July, and was awarded the Military Cross. His younger brother, Second Lieutenant Sidney Woodroffe, Rifle Brigade, was killed in this engagement, and was awarded the Victoria Cross. Captain Leslie Woodroffe, having recovered from his wound, returned to the front on June 1, and was again wounded on the day of his arrival; he died in hospital three days later. Another brother, Lieutenant Kenneth Woodroffe, Rifle Brigade (the Cambridge Cricket Blue), was killed at Neuve Chapelle in May last year, and was mentioned in Lord French's dispatch.

WE congratulate University College School, Hampstead, on the appointment of Mr. Guy Kendall as Head Master, in succession to Dr. J. H. Spenser. It was under Dr. Spenser that the School, in 1907, was transferred to its new quarters from Gower Street, where, in spite of financial difficulties, it had greatly flourished under its two latest Heads, Mr. H. W. Eve and Mr. J. L. Paton, now of the Manchester High School. In spite of a fine site and splendid buildings it has hitherto failed to attract members. Mr. Kendall, who won the Newcastle Medal at Eton, came to Magdalen as a Demy in 1895, and took a First in Moderations and Classical Greats. After a short apprenticeship at Manchester, he joined the staff of Charterhouse, and is at present Head of the Modern Side. Though by training a pure classic, he is, as our readers know, a man of broad views and wide sympathies. There was a large field of candidates, reduced by the Committee of Selection to two, and the final choice of the Governors was unanimous.

SIR HENRY MIERS, in his Annual Report as Vice-Chancellor to the Manchester University Court, mentioned among the characteristic developments resulting directly from the War, the opening of the Museum to classes of children from the City Schools. In this way about a thousand children passed through the Museum. He hoped that the practice would spread to other towns (e.g. London). As to the depleted University, he said that women had to a great extent saved the situation.

THE London School of Dalcroze Eurhythmics has issued its first Report. The Society now numbers 280 members, and it is reckoned that there are now well over 1,300 pupils, mostly children, receiving regular instruction in the method. The London School, under the direction of Mr. and Mrs. Percy Ingham, has now on its staff sixteen Diplômées and Certificated teachers. A demonstration by students at Stratford-on-Avon has been arranged for Monday, July 31. Subscriptions should be sent to the Hon. Secretary, Mrs. Eckhard, Broome House, Didsbury, Manchester.

"Kosovo Day" was celebrated on June 28, too late for *The Journal* to record what was done, and we can only wish the movement, under the direction of a strong Committee, the success that it deserves. For more than five centuries has Kosovo been kept in Serbia as at once a day of national mourning and a declaration of unconquered independence. England has done much for Serbia, and the War can show no nobler deeds of heroism than those of British doctors and nurses in the winter retreats of the Serbs across the snow-clad mountains of Albania. Masters and mistresses who would tell the story to their pupils will be supplied with suitable pamphlets, &c. (some by Dr. Seton-Watson), by the Kosovo Day Committee, 50 Parliament Street, S.W. In France, on such a day, £36,000 was collected in children's pence.

SPEAKING, on May 27, at Manchester University, at the Conference arranged by the North-Western District of the Workers' Educational Association, Miss Margaret Ashton made some pertinent remarks on educational economies. "Other kinds of economy," she said, "were recoverable in after years, but the children who were robbed to-day were robbed for the whole of their life. Thousands of fathers had gone to the War, the mothers were being told to go out and work; yet now, when home control could be maintained with difficulty, was chosen as a time to lessen school control also. If women filled the places of men, the majority

would desire to return to their homes, but it was folly to think they would be able to get the children back into the schools." Miss Ashton pointed out that one did not hear any talk of taking children from the great public schools and putting them into industry—all these changes were aimed at the working classes.

THE Stratford-on-Avon Conference of Teachers of English, announced last month, will be held from August 7 to 12. The program includes papers by J. H. Fowler on "The Teaching of Composition"; by Miss M. G. Jones (Alexandra College), on "The Literature Lesson"; by Dr. Stanley Leathes on "Examinations in English." Prof. Rippmann will hold lectures on "English Phonetics," and also in connexion with Miss Elsie Fogerty's Summer School of Speech Training. Monday, the 7th, will be devoted to an open discussion of "The Ideal School Edition of Shakespeare," over which Sir Sidney Lee will preside. The fee for admission to the Conference is 10s.

THE Central Bureau for the Employment of Women and Students' Careers' Association have issued their report for 1915. In the Registry Department there has been a large increase, and the Loan Fund has proved of great benefit.

CAMBRIDGE SUMMER MEETING.—To our notice of last month we may add that accommodation for women students can be obtained at Newnham and at the Cambridge Training College at an inclusive charge of £3. 10s. Forms of entry and further information will be supplied on application to the Rev. Dr. Cranage, Syndicate Buildings, Cambridge. The price of tickets for students in general is £1. 5s., but large reductions are made for working men and women and for Extension students who have obtained the University Certificate.

FROM Cambridge we hear that, while the undergraduates are reduced to about a tenth of the usual numbers, most of them Orientals, Girton and Newnham are as full as in peace time.

SAFE NOVELS.

Jerusalem: a Novel from the Swedish of SELMA LAGERLÖF. Translated by VELMA SWANSTON HOWARD. With an Introduction by HENRY GODDARD LEACH. (Laurie.)

Habent sua fata libelli! In 1903 Mr. W. Heinemann published an excellent translation of *Jerusalem*, by Tessa Bröchner, that revealed to discerning Englishmen in the obscure Swedish schoolmistress a new writer of romance worthy to take rank with Charlotte Brontë and George Eliot, and this judgment was confirmed when in 1909 the Nobel Prize in Literature was awarded to Selma Lagerlöf. Now, in 1916 we have what purports to be a new translation of *Jerusalem*, with an introduction by a gentleman who dates from Villa Nova, Pennsylvania. Between the two translations there is little to choose, and of the two we prefer the older as simpler and free from some ugly American idioms, but this is a trifle. What needs explanation is the presentment of the half as if it were the whole, without a word to warn readers either that they have here only the first half or that there is more to follow. We can only suppose that Mr. Werner Laurie was as ignorant as were several of the reviewers both of the original work and of the previous translation.

COLONIAL AND FOREIGN NOTES.

FRANCE.

With no end in sight, all the nations are bethinking them of their housekeeping when the War is ended. We are concerned here, not with State economy in general, but with France and with the school. *L'Ecole après la guerre* is the subject of a Report presented to the (Catholic) Société générale d'Éducation by the Abbé Duplessy, who sees signs that the struggle will at least mitigate the bitterness of the great religious and educational quarrel in France. The soldiers will bring home the habit, learned in the trenches, of toleration and mutual respect. The spirit will beget a reality. "La politique de demain," quotes the writer from M. Ferdinand Buisson—an *abbé* embracing M. Buisson is in itself a prognostic—"ne fera que transporter dans la vie publique l'état d'âme de la tranchée." The will to peace on the part of the combatants will be obeyed the more

readily as being in accord with the feeble desires towards peace (*veilles de paix*) of the non-combatants. Rulers will have to yield to the impulse so given. Private (that is, Catholic) schools will no longer be threatened with extinction. State schools will remain lay schools; but lay does not mean hostile to religion. *L'école officielle* and *l'école libre* should be able to live side by side, not as enemies, but as institutions pursuing the same end by different methods, alike zealous in cultivating the sentiment of fraternity in France.

What effect the War will have on our English "religious difficulty," of late happily dormant, we do not

(II) *Continuation.* prophesy, the devil and his creations being possessed of much vitality. In the hope that it will influence education in another way (entrance on which we have long urged) we tell what France is contemplating in that direction. A Bill has been introduced into the Senate by M. Astier, with the support of 177 of his colleagues, to organize technical, industrial, and commercial instruction. It has five sections. The first four codify existing law, with two important innovations: the creation of *écoles de métiers* by Chambers of Commerce with financial aid from the State, and the organization of private schools, which, receiving grants, will co-operate with public institutions in the work of technical instruction. It is the fifth section that is most significant. It proposes to establish for boys and girls, under eighteen years of age and employed in commerce or industry, *free and obligatory* continuation courses. These courses would be arranged by local committees in communes designated by the Minister of Commerce, commune and State both contributing to the cost. Employers of labour would be empowered to establish their own courses and, if they pleased in their own factories. Lessons would be given, *as a principle*, during the legal working-day, at the rate of four hours a week, or one hundred a year, at the least. Masters would be required to free their young work-people for attendance. After a three years' course pupils would be admitted to compete for a *certificat d'aptitudes professionnelles*; failing to obtain it they would receive an attestation that they had attended continuation classes for three years and were thenceforth exempt.

It is a far cry from a Bill to an Act in operation. Yet we welcome the indication that France is moving.

In England.

Let us glance for a moment at England. It will be remembered that, when the Departmental Committee on Education after the War was appointed, the terms of the reference were that the inquiry should have regard particularly to the interests of those—(1) who have been abnormally employed during the war; (2) who cannot immediately find advantageous employment; (3) who require special training for employment. Thus it appears that the Board of Education has once more succeeded in blinding the Minister; for it is the essence of the Vocationalism that *every* child requires special training for employment. We cannot repeat in a paragraph all that we have written on this subject. Yet we take the opportunity of laying stress on three points of our contention: (1) Compulsory continuation (introduced—as we propose—by stages) would be more acceptable if it were mainly vocational; (2) Vocationalism implies increased intensity in chosen studies or pursuits, but does not exclude general culture; (3) The pedagogic problem how to combine liberal with vocational education, remains. Can we in making, for example, the perfect carpenter make the perfect man? Or, rather, can we make the perfect carpenter *without making the perfect man*? Both in France and in England we shall learn by experiment what it is possible to do. Why, we ask once more, will they not let us reach the experimental stage?

We have told how the French girl is going to the front of commerce; let us add that there has been founded for her at Paris a special *Ecole des Hautes-Etudes commerciales*. In agriculture, too, she

Agriculture and the Girl.

is to play a new part. Daughters will be left after the War to cultivate their fathers' lands and many young women in towns are looking to the country for health and livelihood. To meet the new want *La ferme-école de la Pilatière*, the first of its kind in France, has been established in a beautiful part of Poitou. A scheme of theoretical and practical studies for it has been approved by the *Société Nationale des Agriculteurs de France*, and its pupils will learn not only how to cultivate land, but also the indispensable elements of physics, chemistry, botany, law, agricultural book-keeping, social economy, and hygiene. Three classes of students are contemplated:—(1) girls of eighteen (board 1,500 francs a year); (2) *élèves professionnelles* (paying 1,000 francs a year); (3) *aides-ménagères*, admitted at fifteen and charged only 350 francs. Lastly, arrangements will be made for summer students paying 200 francs a month. The pupils will be trained to manage a house as well as to work a farm.

But there is to be no general seduction of girls from literature.

Latin.

Their friends crave more Latin for them and see in them the saviours of humanism. It was said lately: "C'est par le féminisme que l'humanisme reviendra en faveur. L'étude du latin est un commencement de revanche sur l'affreuse Kultur." Not ours the responsibility for such utterances. In the *Revue pédagogique* (lxviii, 4) M. Lucien Lavault pleads for Latin in primary education.

UNITED STATES.

The General Education Board, a creation of Mr. John D. Rockefeller, proposes to reform education by eliminating the formal teaching of mathematics, grammar, Latin, Greek, "useless historical facts," and

Criticism invited.

"obsolete and uncongenial" classical English authors. It invites criticism of a scheme, elaborated by its Secretary, Mr. Abraham Flexner, for a "modern school." Says Mr. Flexner: "Apart from reading, writing, spelling, and figuring, the curriculum would consist of actual activities in science, industry, aesthetics, and civics. The work in science would be the central and dominating feature." "Such evidence as we possess," he adds, "points to the futility of formal grammar as an aid to correct speaking and writing." Again, "it is useless to inquire whether a knowledge of Latin and mathematics is valuable, because pupils do not get it; and it is equally beside the mark to ask whether the effort to obtain this knowledge is a valuable discipline, since failure is so widespread that the only habits acquired through failure to learn Latin or algebra are habits of slipshod work, of guessing, and of mechanical application of formulæ." His "modern school" would give practical training in one or more living languages, and would use translations and adaptations from all foreign languages, old and new. Every exercise would be a spelling lesson. The children would begin their work by making acquaintance with trees, plants, animals, hills, streams, and rocks, and they would learn to care for animals and plants. In the next stage they still keep their eyes on plants and animals, studying them more biologically, and would begin experiments in physics, chemistry, and biology, including among the appliances that they used a fireless cooker, a camera, and a wireless telegraph. Mr. Flexner imagines a "modern school" in New York City, and points out the rich materials afforded by the harbour, libraries, museums, theatres, and so forth. At present, he says, children living in this instructive environment get, for the most part, precisely the same education as they would be getting in Oshkosh or Keokuk.

Farmers of the old school are contemptuous of formal instruction.

The Teaching of Agriculture.

A scientific lecturer having addressed a farmer's institute heard one of his auditors say: "Let them blow, John! They can't hurt us none." But the United States is reaching the young, and the Board of Agriculture issues papers to "correlate" teaching in agriculture. That for May and June may serve as an example. By way of physical exercise the children, it is recommended, should visit orchards to observe the spraying for moths, or range the fields to study birds in their relation to farm crops. As a language lesson they should write reports on the planting or on their excursions afield. In arithmetic their exercises should include problems of ploughing and harrowing together with calculations of the cost of crops in respect of land-rent, fertilizers, seed, and labour. Geography might offer them, for example, a knowledge of the place of origin of insect pests, or show them pictorially farming operations in various foreign lands; whilst history developed the progress of agricultural methods and appliances. For literature there should be put into their hands such pieces as *The Farmer's Creed*—Mann; *The Pea Blossom*—Anderson; *A Song of the Oriole*—Howells; *Blessing the Cornfield*—Longfellow (*Hiawatha*); *The Birds of Killingworth*—Longfellow; *A Day in June*—Lowell.

The tendency in the United States is all towards Vocationalism.

Paper-making at a University.

The publishers' lists contain many such books as Doley's *Vocational Mathematics* and Bengston and Griffith's *The Wheat Industry, for the Use of Schools*. The Universities are no less affected by the movement than the schools. Thus the University of Maine is training men for the paper-making industry. Instruction in the manufacture of paper and paper pulp was given by it first in 1913, and from the beginnings then made a separate, four years' course has been developed, based on the fundamental chemical and engineering subjects. The processes are conducted in the laboratory of the University as they are in a mill; but the student must spend at least one undergraduate vacation in an actual pulp or paper mill, where he puts on overalls, takes orders from a foreman, and earns two dollars a day. Here is an example of the academic work. A student receives a sample of writing-paper. He makes and reports various

tests, then calculates the amount of rag, wood-pulp, size, &c., needed to make 1,000 lb. of paper of the same kind. The University looks forward to the possession of a model paper mill of semi-commercial size, such as that with which enthusiastic and generous paper-makers and paper machinery builders of Germany have equipped the excellent schools of paper-making at Darmstadt and Eberswalde.

In James B. Angell, who died at the age of eighty-eight, the United States has lost a great educator—a pioneer in developing co-education and the system of State Universities. Head of the University of Vermont and then of the University of Michigan, he reigned as a University President in all for forty-eight years. He was a recognized authority on international law, and represented his country as Minister, first in China (1880-81), and afterwards in Turkey (1897).

CANADA.

"It is gratifying to report that the War, with its trials and burdens, has not diminished popular zeal for education," writes the Ontario Minister of Education in dealing with the year 1915, and issuing the school statistics of the province for 1914. He can print a goodly list of teachers who have enlisted for service beyond the seas. But Ontario has exhibited also a high form of patriotism in caring for its children at home; nor have the people slackened in their efforts to secure qualified teachers, to increase salaries, and to erect new buildings with modern equipment. Moreover, the teachers have gladly discharged the duty incumbent upon them to instruct their pupils in the issues and events of the conflict in which Canada is playing so glorious a part. A sequence of pamphlets entitled *The Children's Story of the War* circulates in the schools.

A steady improvement in the professional status of teachers employed in elementary schools is apparent. The Province is paying better salaries; the sum applied to the payment of teachers in public schools has been more than doubled in the decade of years from 1904 to 1914, standing at 7,203,034 dollars in the latter year, when the average salary of a man teacher was 875 dollars and of a woman teacher 604 dollars. To train the growing number of candidates the staffs of the Normal schools had to be strengthened. As to the attendance of the children, the enrolment showed an increase in 1914 of 13,595 on that in the previous year. The condition of the (131) continuation schools remains satisfactory; the attendance has risen to 6,069, nearly half the pupils being sons or daughters of farmers. Ontario sees the importance of these schools and is through them providing for the vocational needs especially of the rural communities. The (161) high schools and collegiate institutes, which serve all classes of the people, have also an increased population. Provision is made for systematic physical exercises and drill, and the Report observes: "An increase in the number of cadet corps is anticipated whether or not any steps are taken in the future by the State to make this form of training compulsory in all schools." In fine, all is well in Ontario.

QUEENSLAND.

The Queensland teachers have two desires in which we cordially sympathize with them. They would have the registration of schools and teachers. At present any person of whatever character or attainments may set up a seminary in any building that he chooses. We doubt whether that is now possible in Timbuctoo! Again, they ask for an Appeal Board, to which disputed matters affecting the position or welfare of the teacher might be referred and on which the teachers were fairly represented. Some years ago we proposed for England something analogous to the French Conseil supérieur. It was to deaf ears.

POLAND.

From Vilno it is reported that a Society for Polish Education has just been founded to exercise control over Polish schools, and to provide them with books and primers. This Society controls ten secondary schools, thirty popular schools, and numerous professional schools and courses for teachers. At Warsaw the German authorities have confiscated all books concerning the Polish Legions, as well as many dealing with the independence of Poland. An address to the Supreme German Civil Council by the Council of the Jewish community in Warsaw urges the free teaching of Polish to Jewish children, who are at a great disadvantage if they can speak only Yiddish.

INDIA.

In February, Lord Hardinge laid the foundation stone of the All-India Hindu University at Benares. This will give India six Universities, or one for every 52 millions of her people; in the United Kingdom there is a University for every two and a-half millions of the population. Of the five older Universities, three (Calcutta, Madras, Bombay) were incorporated in 1857, the fourth (Punjab) in 1882, and the fifth (Allahabad) in 1887. On the last of these dates the population numbered 260 millions; it is now 315 millions. It still takes about 25,000 of the population to provide annually a pupil qualified for admission to a University, and each year only one B.A. is produced for every 100,000 inhabitants.

Since his appointment in 1910 Lord Hardinge has steadily promoted the cause of education; under his administration the expenditure has risen by 50 per cent. Both he and Sir Harcourt Butler have taken a very keen interest in the Benares scheme as an experiment in denominational management. The latter has now been succeeded as Minister for Education by Sir C. Sankaran Nair, a distinguished Madras judge, and the former will give place to Lord Chelmsford, who has already gained some reputation in the educational administration of London. It is now the declared policy of the Government that the number of Universities should be increased: the spirit is dead that prevailed when the last Universities Commission asserted that it was in the best interests of India that there should be only a small number of highly educated men.

In the near future the number of Indian Universities will probably be doubled. The University of Dacca will shortly come into existence. The schemes for the Central Provinces and Bihar (Nagpur), for Bihar and Orissa (Patna), and for Burma (Rangoon) are all in active preparation. The native State of Mysore has formulated plans for a University of its own, thus giving Southern India the prospect of a second institution. The scheme for a Moslem University at Aligarh has been delayed by the promoters' hesitation over the degree of control to be exercised by the Government, but their misgivings will be overcome. Before long, therefore, each of the ten great provinces of India will have at least one University at a convenient centre, and the accepted principle of territorial jurisdiction will then be more readily applicable than it is at present. And, what is of more importance, the development of the residential and teaching aspects of University life, as distinct from mere examination, will be quickened, and the level of Indian academic activity appreciably raised.

UNIVERSITIES AND SCHOOLS.

LONDON.

The presentation of graduates on May 10 was carried through this year "with maimed rites," sans flowers and bells and the other accessories usually associated with the ceremony. The report of the Vice-Chancellor (Sir Alfred Pearce Gould) referred in detail to the services which the University had been able to render in connexion with the War. 2,031 Cadets of the O.T.C. had proceeded to commissions, of whom 89 had fallen in the War, and the honours conferred included 1 C.B., 1 V.C., 30 Military Crosses, and 78 mentions in dispatches. It was not possible to give general statistics of War service for graduates and students, but some 600 members of the staffs of Colleges and Institutions of the University, and 6,000 past and present students had answered the call, and 226 had been killed in action or died of wounds since last Presentation Day. There was necessarily very little to report in regard to academic developments and benefactions. Lord Rosebery impressed upon the University once again the need for self-help. "We shall do far better," he said, "by co-operating together, without distinction of party or section, to make the University of London worthy of its name, without hoping for much assistance from Government, or even from County Councils." The usual service was held at Westminster Abbey after the presentation, the Archbishop of Canterbury being the preacher.

Toward the end of May the University was honoured by a visit of a party of French professors, headed by M. Joubin, Recteur de l'Académie de Lyon. A thorough inspection was made of the work in progress, both at headquarters and in the various Colleges.

The King has congratulated the University, through Lord Stamfordham, upon the important part it is taking in connexion with the War, not only in actual military service but in science and research.

Mr. Fitzmaurice-Kelly has been appointed to the new Professorship in Spanish, tenable at King's College. Dr. A. F. Pollard has

been appointed Creighton Lecturer for 1916-17, and will lecture on "The History of English Military Service."

The Royal Charter has been issued to the new School of Oriental Languages at the London Institution, Finsbury Square, and the first meeting of the governing body has been held.

OXFORD.

We have now come to the end of a second academic year of the War, and are mostly wondering what will be left of the University next term. We may hope that this summer will not end without the end of the War being at least in sight. It will be a long time at the best before we get our men back from the War, but no doubt when the end is in sight we may begin to get Freshmen again. Whatever happens there will certainly be a remnant of undergraduates next term. For the University has by this time found its war level. There are now naturally no undergraduates eligible for military service, and the numbers, made up as they are of aliens and invalids and young men who are spending the time between eighteen and nineteen in starting their University and qualifying for entrance to a cadet battalion, will probably remain much the same as they have been this last term.

There has been some discussion as to how far it is worth while going on in these circumstances, and more talk of the possibility of several Colleges amalgamating, but nothing has been or is likely to be decided. The teaching staff has, after all, decreased in proportion with the undergraduates. There are certain parts of the University, the science and medical faculties, which are as much wanted in war time as in peace. Any arrangements for "stopping the University" in such a way that it could easily be set going again when wanted, would certainly be as expensive as keeping it going in its present state. Council continues its policy of getting all Professorships and Readerships suspended when they fall vacant.

There seems a good chance of the University surmounting financial difficulties much more successfully than was anticipated. Among the many gifts that have come to relieve the stress, the University has this term to acknowledge donations of £100 each from Mansfield and from Manchester College, two institutions which, though not formally Colleges of the University, have played of late years an increasingly distinguished part in it. To return to the suggestion as to the amalgamation of Colleges. The practical difficulties are great. A man of great energy and personality could probably get the thing done, but such men, whatever their age, are all absorbed in War work of some kind. Meanwhile the increased number of officer-cadets is filling many of the Colleges and helping them to carry on. There are now two Officer Cadet Battalions and a large Flying Corps School in Oxford.

There has been no very important legislation this last term, but there are rumours that proposals for reconstruction after the War are occupying attention. Schools will probably be very different after the War, and the University will have to accommodate itself to some extent to the changes. What we want more than anything else is the formation of a great school of political studies and the reform of the Pass Schools. There is good hope of the first, less signs of the second. At the worst all that will happen will be that compulsory science will be introduced, with the effect, though not with the purpose, of bolstering up compulsory Greek. The critical time for reform will be when the younger teachers come back, and before the full work of the University has begun again.

Perhaps the most notable event of the term has been the opening of the new Chemical Laboratory—the Perrins Laboratory, as it is to be called after the generous donor—a fit complement to the new statute on Chemistry, from which so much is hoped. Work in it is already in full swing, and much valuable and important work for Government is being done there.

We have to mourn the loss not only of the young killed in action, but also of older and distinguished members of the University—Professor Napier, Professor of Anglo-Saxon, one of the greatest of our scholars, who had made Oxford a centre of philological study; the Rev. H. F. Tozer; and Prof. W. R. Hardie, who, though a Professor at Edinburgh, will long be remembered for his work as a tutor of Balliol. Two notable University figures must be mentioned. Mr. Moon, for many years Bedell in Arts, and well known to many generations of the University; and Mr. Molyneux, the editor of the *University Gazette*.

WALES.

The University Commission is at present in Wales visiting the three University Colleges and, by means of informal conversations with some of the leading educationists, endeavouring to gather information

which will guide them in their deliberations. The formal inquiry will take place in London in September, when evidence will be heard on all the chief points of interest and importance.

The most controversial question, and the most fundamental, which the Commission will have to solve is whether it is advisable that the federal system shall be perpetuated. The whole future of the University depends on the reply which the Commission will give to it, and there is therefore a certain amount of anxiety as to the attitude which they will adopt with regard to it. The federal system has its drawbacks, no doubt, particularly on the administrative side, as it entails a great deal of travelling and consequent expense. On the other hand, it is undeniable that no University system would have been possible except under the present scheme, as there is no large centre of population in Wales, like Manchester, Liverpool, or Leeds, with sufficient resources to maintain a properly equipped University. Cardiff claims, it is true, that its population and wealth justify it in demanding a University of its own, and the Senate of the University College are understood to be unanimously in favour of breaking up the federal system, and are supporting the plea for a separate University. The Council, on the other hand, are divided in opinion on the question, and the majority believe that the breaking up of the University would be a serious disaster. The Commission has also paid an informal visit to the Swansea Technical College, where they inspected the equipment and interviewed some of the leading business men in the district. A strong case has been made for the inclusion of this Institution in the University, and it is hoped that the Commission will be prepared to report favourably on its claim.

The University had resolved to confer a degree *honoris causa* on the Right Hon. W. M. Hughes, the Prime Minister of Australia, at a special meeting of the Court in London; but, in view of his many engagements and the alteration of his plans by a change of date in the Paris Conference, it has been found necessary to abandon the project. At the next Congregation on July 15, honorary degrees will be conferred on Mrs. Mary Davies, Sir Owen M. Edwards, Rev. Prof. H. M. Gwatkin, Mr. H. K. Jordan, and Dr. Henry Owen.

The Central Welsh Board have issued in pamphlet form—"To-day and To-morrow"—all the memoranda which the special sub-committees of the Board have published. These have been circulated among Welsh Education Authorities for their consideration and criticism. The questions to which the attention of the Local Authorities is particularly directed are: (1) Whether any amendments are desirable in the constitution and powers of the Central Welsh Board, and whether the time has now arrived for the institution of a Welsh Authority vested with more responsibility as contrasted with the present centralized powers of the Board of Education in reference to Parliamentary grants; (2) what modifications are desirable in (a) the Examination system, (b) the Inspection system in vogue under the Welsh scheme? (3) is the instruction imparted in the secondary schools the most helpful possible, having regard to the length of stay of the pupils? (4) whether it is desirable to make combination between schools and counties more easy, especially for the purpose of technical education and differentiation of schools.

The memoranda are designed to assist members of Education Committees to appreciate the objects of the inquiry and to supply them with data to enable them to arrive at a considered judgment with regard to these problems at this stage in our national educational evolution. As the Board are also of opinion that there are so many urgent educational problems to be solved that the desirability of an early Government inquiry is clearly established, they would therefore welcome comments from Local Authorities as soon as possible.

The two most important memoranda are those dealing with the history of Secondary Education in Wales and the proposed constitution of the new Education Council. From the former we learn that in 1896 the number of pupils was 3,367, and in 1915-16 the number had increased to 16,106. In 1897 there were 135 assistant masters and 148 assistant mistresses in the Welsh Intermediate Schools. Of the assistant masters, 54 (or 40 per cent.) possessed no University degree, while 52 per cent. of the assistant mistresses were without this qualification. In 1914, only 22 per cent. of the assistant masters had no degree and 29 per cent. of the mistresses—a much more satisfactory state of things. In 1898, the average salary of an assistant master was £117 19s. 2d., and of an assistant mistress £98 4s. In 1914 the corresponding figures were £156. 2s. 9d. and £125. 15s. 4d.—figures which show considerable improvement, but which are very inadequate even yet.

The constitution of the new National Council is on the lines of

The University Commission.

THOMAS NELSON & SONS' List

NELSON'S LITERATURE READERS

Edited by the late Dr. RICHARD GARNETT, C.B.

Literature Reader I. 1s. 6d.

Literature Reader II. 2s.

Nelson's Literature Readers are designed to give the pupil before leaving school an introduction to, and a taste for, the very best class of English literature. The name of Dr. Garnett as editor is a guarantee that the treasures of our literature have been laid under contribution, and that the best authors have been selected. The books are highly suitable for intermediate forms in Secondary Schools.

Preparatory Mathematics

A New Arithmetic for Junior Forms in Secondary Schools and Upper Standards in Primary Schools.

By A. CLEMENT JONES, M.A., Ph.D., and
C. H. BLOMFIELD, M.A., B.Sc.,

Mathematical Masters in Bradford Grammar School.

Cloth, with or without Answers. Price **1s. 6d.**

This new and highly interesting volume aims at preparing the pupil for formal Mathematics by taking him through a complete course in Number Work, and so introducing him not only to Arithmetic proper, but also to Algebra and Practical Geometry. It will be found invaluable in Junior Forms of Secondary Schools, as well as in recapitulating the whole of the work covered in the Elementary School, and so preparing for the Labour Certificate of the Board of Education. Teachers who use this book will find their pupils interested from the first, as the examples make direct appeal to the everyday life of the boy and girl.

Great care has been taken in the external production of this volume, which in this respect marks a new departure in Mathematical works.

Nelson's English Practice

A New and Highly Attractive Series, designed to teach Spelling, Reading, Sentence-Formation, and Simple Grammar. Beautifully illustrated in Colour and Black and White.

Part I. 54 pages. Four Coloured Plates. Cloth limp, **4d.**

Part II. 54 pages. Four Coloured Plates. Cloth limp, **4d.**

Part III. 54 pages. Four Coloured Plates. Cloth limp, **5d.**

These little books are designed to teach in the pleasantest possible manner — (i) The spelling of common words, for the most part names of things with which the youngest children are familiar; (ii) the formation of simple conversational sentences; (iii) a few of the conventional devices adopted in writing English, such as the use of the capital letter, the apostrophe, &c.; (iv) a little simple grammar without any of the terms of the textbook.

Most of the lessons are arranged in three parts—namely: (i) spellings; (ii) sentence work; (iii) reading and study of simple English.

The spellings are carefully chosen to lead up to the sentence work. A little word-building is included, but not enough to set the young pupil on the track of useless words. No word is set down in the spelling list unless it is to be used in an exercise immediately following.

The spellings are clearly printed and well spaced, as most children learn to spell a word by creating a vivid mental picture of it.

Finger-Posts to British History

By ROBERT S. RAIT, M.A., Fellow of New College, Oxford,
and Sir EDWARD PARROTT, M.A., LL.D.

A Summary, with Dates and Notes, of the Chief Events in British History. Price **2s.**

In accordance with the express desire of many teachers for a summary of historical dates and facts suitable for revision and preparation for examinations, we have issued a volume entitled "Finger-Posts to British History." All the salient dates and events are exhibited in their relative importance by variations of type and colour; the main topics of each reign or section are dealt with in short pithy notes; diagrams and maps are freely introduced, and a glossary of terms and a biographical dictionary are appended. The book will meet the needs of students for all elementary historical examinations.

Nelson's School History of Great Britain and Ireland

By G. W. PROTHERO, M.A., Litt.D.,
Formerly Professor of History in the University of Edinburgh.

480 pages. Illustrated with forty-eight excellent Coloured Reproductions from Paintings by Great Historical Artists.
Cloth. Price **2s. 6d.**

The most complete history textbook yet published for schools, suitable either for general middle form work or for examinations up to matriculation standard.

Written in lucid, straightforward language, and excellently adapted for school pupils who cannot comprehend the intricacies of national policy and the exact significance of constitutional changes.

Nelson's Composition Books

These little books provide a carefully graded series of lessons and exercises in Composition. They will be found to be a valuable companion to or substitute for the ordinary Grammar Textbook.

In the earlier parts especially, the exercises are equally suited for working orally or in writing.

Book I. Paper, **2d.**; cloth, **3d.**

Book II. Paper, **4d.**; cloth, **6d.**

Book III. Cloth, **7d.**

Teachers' Book. Consisting of Books I, II, and III, bound together and interleaved. Price **1s. 6d.**

Unique Aids in the Teaching of English Composition.

First Illustrated Composition Book.

64 pages. Paper, **3d.**; Cloth, **4d.**

With fifty illustrations supplying the material for composition exercises based upon observation.

Second Illustrated Composition Book.

64 pages. Paper, **3d.**; Cloth, **4d.**

With forty-eight illustrations designed to exercise the pupil's powers of imagination, and aid his efforts at description.

Picture Essays. An Illustrated Composition Book.

112 pages. Paper, **4d.**; Cloth, **6d.**

A fully illustrated Composition Book, with notes on the pictures, supplying the facts but not the form in which they are to be conveyed. The subjects are classified under the following headings:—The Animal World, The Vegetable World, The Mineral World, Geography, History, and Miscellaneous.

THOMAS NELSON & SONS, Ltd., 35 & 36 Paternoster Row, London, E.C.

AND PARKSIDE WORKS, EDINBURGH.

the Bill drafted by Sir D. Brynmor Jones. It seeks to obtain for Wales practically complete educational autonomy, and therefore is certain to give rise to much controversy and opposition. Among the objects aimed at is the abolition of the control of the Welsh Department.

The Central Welsh Board will discuss the memoranda, as well as the resolutions of the Committees, at their next annual meetings, to be held next November.

SCOTLAND.

Miss Muriel Smith, Lecturer in German, has instituted a class to enable War workers and others to read and translate German scientific texts. Provision has been made for extending the equipment of the Physiology department at St. Andrews, in anticipation of an increase in the number of women medical students next year. University Hall, the residence for women students, is to remain open during the summer vacation for the accommodation of women War workers.

The Senate has resolved to confer the following honorary degrees:—D.D.: The Rev. Joseph Mitchell, B.D.; the Rev. Robert Munro, B.D.; the Rev. Frederick Platt, B.D., Tutor in Theology, Handsworth College, Birmingham; and the Rev. George Walker, B.D. LL.D.: Mr. William E. Clarke, Keeper of the Zoology Department, Royal Scottish Museum; Mr. Charles T. Clough, M.A., Geological Survey of Scotland; Mr. Robert B. Don, M.A., member of Council of University College, Dundee; Mr. Lewis R. Farnell, D.Litt., Rector of Exeter College, Oxford; Mr. Cargill G. Knott, D.Sc., Lecturer in Applied Mathematics, University of Edinburgh; Emeritus Professor Musgrove, M.D., St. Andrews; and Mr. William R. Scott, D.Phil., Professor of Political Economy, University of Glasgow.

The proposed draft Ordinance for degrees in Education has been submitted to the University Court, which has deferred consideration of it for a month. As the number of woman students of Medicine has been doubled during the present session, the Court has given authority to make additions to the equipment of Queen Margaret

College, especially in Anatomy and Chemistry. The bequest of £5,000 by the late Lady Kelvin is to be used for the establishment of a Kelvin Research Fund, for the purchase of apparatus and materials required for research in the Natural Philosophy department. Edinburgh University has presented to the library of Glasgow University a graduation thesis for disputation in the year 1671, which was found in a volume in the Edinburgh library. The late Mrs. Edward Caird has bequeathed her husband's books on Philosophy to the library of the Moral Philosophy Class.

At a special meeting, called by requisition, the General Council resolved to petition both Houses of Parliament to present addresses to the King, praying His Majesty to withhold his assent from the Preliminary Examination Ordinance. The objections raised against the Ordinance were those which have been considered and discussed by all the Universities during several years. The Universities, independently and in conference, have decided almost unanimously that these objections either are unsubstantial or are met by the provisions of the Ordinance. The existing Ordinance makes no provision for any changes in the subjects of examination or in the methods of conducting the examinations, while the new Ordinance gives full power to the Universities to modify the examinations from time to time as may be found desirable. This fact, which the objectors never mention, destroys practically the whole of their case, and it is most unlikely that the agitation for recall of the Ordinance will have any success.

It has been decided that no appointment shall at present be made to the vacant Chair of Humanity. Lord Dundas has resigned his office as a Curator of Patronage. Emeritus Professor Sir William M. Ramsay is delivering his first course of Gifford Lectures on "The Development of Religious Thought and Rites in the Borderlands between Greece and the East."

Delegations of French University Professors were received and entertained at Edinburgh and Glasgow Universities on June 8.

The St. Andrews Committee has made arrangements for a Summer School in Modern Languages, to be held at St. Andrews University from August 1 to 25. Among the languages included in the program are Russian and Spanish, in each of which there will be courses

A. & C. BLACK'S SCHOOL GEOGRAPHIES

By Prof. L. W. LYDE, M.A., F.R.G.S.

SENIOR.

Small crown 8vo. Cloth.

1s. 4d. each.

Each containing problems and exercises. Illustrated with Diagrammatic Maps.

AFRICA.
ASIA.
AMERICA (NORTH).
AMERICA (SOUTH).
EUROPE.
**AUSTRALASIA AND
THE EAST INDIES.**
BRITISH EMPIRE.
BRITISH ISLES.

**SCHOOL GEOGRAPHY OF THE
WORLD.** With Problems and Exercises.

Price 3s. 6d.

COMMERCIAL GEOGRAPHY.

Price 3s.

**A SCHOOL TEXTBOOK OF GEO-
GRAPHY.** Illustrated with 83 Diagrams.

Price 3s. 6d.

Without wishing to compare the merits or demerits of the three volumes above, we should like to explain the differences.

The *Commercial Geography of the World* is, of course, intended specially for use in "commercial" classes; but we believe that geography—if taught on right lines at all—is more easily taught to boys from the commercial than from any other point of view.

With regard to the *School Geography of the World*, the system of what may be called "paragraphed notes" adopted in it is the one which the author found most useful during his first five or six years' work as a teacher.

In the *School Textbook* a comparative use of the diagrams will be facilitated by (1) the classified list of diagrams in the Table of Contents, and (2) the exceptional number devoted to the area likely to be best known, i.e. the Homeland.

JUNIOR.

Small crown 8vo. Cloth.

1s. 4d. each.

Each containing many maps and illustrations, problems, and exercises. Illustrated with Diagrammatic Maps.

***ENGLAND AND
WALES.** No. III.
BRITISH ISLES. No. IVa.
EUROPE. No. IVb.
BRITISH EMPIRE. No. IVc.
AFRICA. No. Va.

HINTS ON FRENCH SYNTAX.

By FRANCIS STORR, B.A. Camb., Officier d'Académie, Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission, University of London, &c., &c.

"A capital little book, which we have no hesitation in recommending to French students."—*The Pall Mall Gazette*.

"Mr. Storr's Hints are to the purpose. They are intended for schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing or speaking may use them with advantage."—*The Athenæum*.

Extract from Author's Preface.—At the request of several Masters and Mistresses, who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

London: WILLIAM RICE, Junior, 3 Broadway, Ludgate Hill, E.C.

of sixty hours. At a meeting of the Glasgow Committee it was reported that by March 1, 1916, every student in the Training College who was eligible for military service had enlisted or been attested. All the College lecturers and members of administrative staff who are of military age have offered their services. The number of students trained under the Committee during the current session was: For the General Certificate, 941; for the qualification as teachers of higher subjects (secondary education), 37; and for the qualification as teachers of Art or of Domestic Science, 254. The Education Department has limited the number of candidates for the teachers' certificate who may be enrolled at the Glasgow centre to 500 per annum. Preference is to be given in the first place to graduates, and in the second place to holders of the full Leaving Certificate. Miss Ethel L. McKnight, M.A., Secretary of Bedford College, London, has been appointed Principal Lady Warden of the new Hostels for Women Students at Craigmillar Park, Edinburgh.

IRELAND.

As usual, the Board of Trinity College met on Trinity Monday, June 5, for the annual election of scholars, but not, on this occasion, of a Fellow, no Fellowship examination having been held this year. Ten Scholarships were awarded, two in Classics, four in Mathematics, one in Experimental Science, and three in Modern Languages. Of these, three fell to women students: one (third place) in Mathematics, and two (first and second places) in Modern Languages. The customary festivities were wanting this year, but the students let off steam by lighting a bonfire in "Botany Bay."

The Donnellan Lectures were delivered this term by Bishop Boyd Carpenter, who gave three interesting addresses on the study of Dante, the first being devoted largely to Boethius, whose great work seems in these latter days to have fallen into an undeserved oblivion. There was a large public attendance at the lectures. Bishop Boyd Carpenter also preached in the College Chapel on Sunday, June 18.

The annual distribution of prizes took place at Maynooth College on June 20, Cardinal Logue presiding. The students received

much sage advice from Monsignor Hogan, the President of the College, who told them that the Church wished her young priests to be "docile, and respectful towards all legitimate authority," and from the Cardinal, who recommended them especially "the virtue of prudence, in act and word."

At the annual meeting of the Maynooth Union, held at Maynooth College on the following day (June 21), Cardinal Logue again presided, and, in speaking of the late disturbances, took the opportunity of defending both the Gaelic League (of which he declared himself an enthusiastic supporter) and the National teachers as a body from the charges of seditious propaganda which had been brought against them by certain of the witnesses before the recent Commission of Inquiry, as well as in other quarters since. So far from propagating disloyalty in the schools, the Cardinal considered that the teachers were fettered even in teaching that legitimate patriotism which was regarded as a necessary and proper element in education in England and Scotland. He had been much struck with the difference in this respect between schools in Scotland and schools in Ireland.

The title bestowed on the recent rising by the Provost of Trinity in a letter to the press, of "a schoolmasters' rebellion," has become a current phrase since, and has no doubt contributed to the suspicion under which the National teachers have fallen. The *Times*, in its Educational Supplement of the 6th inst., states that the *Sinn Féin* leaders set themselves to capture the schools, that the decline in the prestige and authority of the Board of National Education, which coincided with the Birrell régime, has been accompanied by the growth of a spirit of disaffection, and that not only primary teachers, but lay teachers in Roman Catholic secondary schools, have helped to spread the infection. So serious are these charges that the Commissioners of National Education have decided to hold a representative Conference to consider them. At the late meeting of the General Assembly of the Presbyterian Church in Belfast, the connexion of the national system of education with the *Sinn Féin* rising was discussed, the textbooks employed in the Christian Brothers' schools were criticized, and the total abolition of Irish history teaching was suggested.

To some it seems that the recent events furnish rather an argument for promoting—on proper lines—the teaching of Irish his-

Head of the Higher Commercial Department,
The Polytechnic, Regent Street, London.

Now Ready. Part I, 2s. net; with Answers, 2s. 6d. net. Part II, 2s. net; with Answers, 2s. 6d. net. Also Parts I and II in One Volume, 3s. 6d. net; with Answers, 4s. net. **In preparation:** Part III, 2s. net. Also the complete book, 5s. net. [Bell's Mathematical Series for Schools and Colleges.]

This work is designed to cover the ground of examinations requiring a knowledge of commercial processes, such as those of the Lancashire and Cheshire Institutes, the Society of Arts, &c. In each section the mathematical principles are carefully explained, and copious "drill" examples are set. Following on these come "applicational" examples, drawn for the most part from actual commercial transactions, and not evolved *ex cathedra*.

As instancing some of the sources of these commercial questions may be quoted the fact that foreign records of commercial transactions (Russian, Japanese, French, Portuguese) have been freely consulted.

The mathematical methods given are, as far as possible, in accordance with the spirit and recommendations of the Mathematical Association.

A special feature of the work lies in the varied selection of commercial documents of all kinds, which are reproduced in facsimile.

REVISION PAPERS IN ARITHMETIC.

For the Oxford and Cambridge Local Examinations, County Council Examinations for Minor Scholarships, &c. By CHARLES PENDLEBURY, M.A., late Senior Mathematical Master of St. Paul's School. Crown 8vo, cloth, 1s.

The scheme of this book is designed to provide a well-graduated, comprehensive examination course up to the standard of the Oxford and Cambridge Locals.

A SHILLING ARITHMETIC.

By JOHN W. ROBERTSON, M.A., B.Sc., Mathematical Master, Robert Gordon's College, Aberdeen, and Lecturer at Aberdeen Technical College; formerly Assistant Lecturer in the Mathematical Department of Aberdeen University. Crown 8vo, 1s. net; or with Answers, 1s. 4d. net.

The special feature of this new Intermediate Arithmetic lies in the collection of examples which are both easy and of a vivid interesting nature. Practically all are original and have been adapted from the daily newspapers and standard year books.

Two New French Readers by Marc Ceppl.

RÉCITS HÉROÏQUES. By CHARLES GUYON, Inspecteur d'Académie Honoraire. Edited, with Questionnaire and Vocabulary, by MARC CEPPL. With 16 Illustrations. With or without Vocabulary. 1s. 6d. net.

These stories are reprinted from the "Série héroïque" of "Les livres roses pour la jeunesse," which aims at presenting before French children authentic facts and anecdotes relating to the great War which is now being waged. The French Minister of Education was so struck by the value and usefulness of the books that he caused a large number to be purchased and presented to the libraries of schools and colleges throughout France.

L'HISTOIRE DE PETER PAN.

Par DANIEL O'CONNOR, d'après la pièce de Sir J. M. BARRIE. Traduction en français par MARC CEPPL. Crown 8vo. With 12 Illustrations and Questionnaire. With or without full Vocabulary. 1s. 6d. net.

Mr. Daniel O'Connor's prose version of this delightful fairy play has attained so wide a popularity that no apology is needed for its appearance in this new guise. Translated into simple French, and illustrated by a selection from Miss Alice Woodward's well-known drawings, it should find as many new readers in the schoolroom as have already welcomed it in the nursery.

Cheaper Reissue of Scrivener's Greek Testament.

NOVUM TESTAMENTUM GRAECE (EDITIO MAJOR). Edited, with Various Readings, Parallel Passages, &c., by F. H. A. SCRIVENER, M.A., D.C.L., LL.D. Fourth Edition. Revised and Corrected by Prof. Dr. EB. NESTLE. Printed on thin paper (600 pages). Cloth, 2s. 6d. net.

"An edition of Scrivener's famous collation of the Textus Stephanicus of the New Testament, with the texts adopted by later scholars, on which students can rely for absolute accuracy."—*Church Times*.

A CONCENTRIC GRAMMAR COURSE.

By DULCIE E. HAES, Brondesbury and Kilburn High School for Girls. Crown 8vo, with a Chart in Colours, 1s. 6d.

This new textbook comprises a complete six years' course, planned to cover the ground of examinations up to the standard of the London Matriculation. A feature of the book is the carefully designed chart, in which is crystallized the subject-matter of the book.

YORK HOUSE, PORTUGAL STREET, KINGSWAY, LONDON, W.C.

tory in Irish schools, not only, nor so much, in primary schools, but in secondary ones as well. If it is true that the education given in some Irish schools at present aims at producing ardent patriots with hostile feelings towards England, it is no less true that the education given in a vast number of Irish Protestant schools aims at turning out ardent Imperialists who have no native country. If the two opposing factions in this country are ever to be drawn together, the movement must be made on both sides and must have its origin in a common understanding and a common sympathy, which is hardly possible without a common knowledge of the past. The great majority of Irish people are not extremists in one direction or the other, and the interest awakened of late years in Irish subjects, especially Irish history and the Irish language, has done something to lessen the gap. To eject Irish history from our schools would be to widen it again—and, after all, it is perhaps more important for the interests of Ireland (and, in the long run, of England as well) that there should be some unity of feeling amongst Irish people than that a small section of them should be devoted to the British Empire. Besides, the suppression of truth in the education of the young is, like all counsels of expediency, a disastrous one in the end. It is worthy of note that some of the bitterest foes the English Government has had in Ireland (the recent rising is not wanting in instances) have been those who by birth, traditions, and upbringing belonged to the Anglo-Irish "loyalist" section, and who discovered for themselves the fact, ignored in their education, that Ireland and England were different countries with a widely different past, and in some respects with widely different ideals. The patriotic fever generally takes a more violent form when its germs are first inoculated in riper years. The events of European history during the past two years are making it plain, I believe, that when this war is over we shall have, in all countries, to reconstruct and enlarge our ideas of patriotism and bring them into harmony with the claims of a larger and more comprehensive cosmopolitanism, but they teach none the less that patriotism must ever remain an essential element in education. If Irish children were to be denied the right of learning to know and love their country, if the teaching of Irish history were to be proscribed in Irish schools; then surely there would be a justification for the assumption which underlay the *Sinn Féin* rising—that Ireland was not a free country. The Gaelic League has likewise been brought into suspicion in

the public mind through the rising, and was denounced before the Commission of Inquiry as a seditious organization. It is true that some of the *Sinn Féin* leaders were also leaders and devoted workers in the language movement—notably the late P. J. Pearse, who produced some good work in Irish, including two volumes of graceful and tender tales of child life, and Prof. Eoin MacNeill, well known as a scholar of older Irish literature and history. But there are many political extremists in Ireland who are not in the least interested in the Gaelic League, and the converse holds true to a far greater extent that there are many Gaelic Leaguers who are not political extremists, or even politicians at all; and the Gaelic League remains by virtue of its constitution a non-political body.

Meantime it is under a cloud, and is suffering the loss of some of the most active and useful of its members, and it has been decided to give up the plan, previously accepted, of holding the annual *Oireachtas* in Waterford this year, and to hold it in Dublin instead during the first week in August. One piece of work before the *Oireachtas* will be the election of a new president. If Dr. Douglas Hyde does not see his way to taking up office again, it is probable that the choice will fall on Canon Peter O'Leary, who in spite of his advanced age would be popular with all parties, being a veteran worker for the League and a prolific writer in the Irish language (his native one), his latest publication being a translation of the four Gospels in a fluent, simple, and at the same time literary, idiom.

Meantime the Summer Colleges (which are not controlled by the League) are starting work as usual for the sessions of July and August.

SCHOOLS.

CLIFTON COLLEGE SCHOLARSHIPS.—The following scholarships have been awarded:—Modern Language, £20, A. J. de Pury; Roquette Palmer Palmer, £25, J. S. Wilkinson; Cay for Mathematics, £20, J. V. Meyer; Old Cliftonians', £25, R. E. Enthoven; Robert Hardwicke Percival, £33, J. A. Crompton; Arthur Percival, £30, A. C. Watts-Jones; Charles Frederick Balfour, £25, K. MacColl; Wilson (under 17), £50, C. W. M. Cox.

PRIZE COMPETITIONS.

The winner of the Translation Prize for May is Dr. R. L. Batterbury, Berkhamsted.

AN OMNIUM GATHERUM PAPER ANSWERS.

1. (a) "Grand old fortifying classical curriculum." Lord Lampington in Matthew Arnold's *Friendship's Garland*.
- (b) "What is a Communist?" Ebenezer Elliot.
- (c) Burke's Speech on Conciliation with America. Usually ascribed to M. Arnold, who has "the dissidence of dissent."
- (d) F. A. Wolf.
- (e) Ruskin.
- (f) Bismarck.
- (g) Byron. Of Horace as learnt at Harrow.
- (h) From *Les Guêpes*, by Alphonse Karr. A pamphlet in favour of retaining capital punishment for murder.
- (i) Burke.
- (j) Browning's "Lost Leader." Wordsworth was intended, but Browning acknowledged unfairness of the attack.
- (k) Wordsworth in sonnet, "Scorn not the Sonnet." Browning's comment is: "If so, the less of Shakespeare he."

Evidently conundrums are not suited for War time. Never in the experience of forty years have we had so meagre an entry. The essays were rarely attempted, and few obtained half-marks for the literary quotations. We are therefore sending the prize to the Women's League of Service.

A Prize of Two Guineas is offered for the best translation of the following extract from Saint-Simon:—

Dangeau étoit un gentilhomme de Beauce, tout uni, et huguenot dans sa première jeunesse; toute sa famille l'étoit qui ne tenoit à personne. Il ne manquoit pas d'un certain esprit, surtout de celui du monde, et de conduite. Il avoit beaucoup d'honneur et de probité. Le jeu, par lequel il se fourra à la cour, qui étoit alors toute d'amour et de fêtes, incontinent après la mort de la reine mère, le mit dans les meilleures compagnies. Il y gagna tout son bien; il eut le bonheur de n'être jamais soupçonné; il prêta obligeamment; il se fit des amis, et la sûreté de son commerce lui en acquit d'utiles et de véritables. Il fit sa cour aux maîtresses du roi; le jeu le mit de leurs parties avec lui: elles le traitèrent avec familiarité, et lui procurèrent celle du roi. Il faisoit des vers, étoit bien fait, de bonne mine et galant; le voilà de tout à la cour, mais toujours subalterne. Jouant un jour avec le roi et Mme de Montespan dans les commencements des grandes augmentations de Versailles, le roi, qui avoit été importuné d'un logement pour lui et qui avoit bien d'autres gens qui en demandoient, se mit à le plaisanter sur sa facilité à faire des vers, qui, à la vérité, étoient rarement bons, et tout d'un coup lui proposa des rimes fort sauvages, et lui promit un logement s'il les remplissoit sur-le-champ. Dangeau accepta, n'y pensa qu'un moment, les remplit toutes, et eut ainsi un logement.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by July 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

HEFFER'S PHONETIC SERIES.

JUST PUBLISHED.

Colloquial English. Part I. 100 SUBSTITUTION TABLES.

By H. E. PALMER, Author of "Manuel d'Anglais parle."
Fcap. 4to. Phonetic and orthographic texts in separate books under one cover. 2s. net.

A most original and exhaustive book for the teaching of English by the means of Phonetics. The author, by a very ingenious tabular arrangement, has made it possible for the book to be extended from 100 tables of twelve sentences each into so vast a number of sentences that the mind is entirely unable to grasp the almost infinite possibilities of the volume.

An Elementary Grammar of Colloquial French on Phonetic Basis.

G. BONNARD, Professeur au Gymnase de Lausanne.
With a Preface by Daniel Jones. Demy 8vo, 3s. 6d. net.

EXTRACT FROM PREFACE:

"It will help, as no other grammar will, both teacher and pupil to bear in mind continually during grammar lessons the all-importance of the spoken language and the comparative unimportance (at any rate for pupils who are not yet far advanced) of the conventional written language."

General Phonetics for Missionaries and Students of Languages.

G. NOEL-ARMFIELD, Assistant in Phonetics, University College, London. Crown 8vo, 3s. net.

"The book can be highly recommended as a sound contribution to the study of Phonetics."—*Modern Language Teaching*.

Cambridge: W. HEFFER & SONS, Ltd.;
and from all Booksellers.

The School Laboratory

The Willett Heating System

A laboratory is essential for the teaching of science. The War has brought the need for scientific knowledge to the fore, and efficient scientific teaching will be expected from every School.

Situated as most Schools are in country places, the absence of coal-gas has frequently been a difficulty in the way of establishing a laboratory. Now, however, Petrol-Air Gas is available to solve the heating problem.

The Willett Generator is simplicity itself to work, and produces a petrol air-gas which can be used with bunsen burners, &c., in exactly the same way as coal-gas, and offers all its advantages. The system has been adopted in the laboratories of the Admiralty, Ministry of Munitions, and by large explosive manufacturers.

The Willett Generator is self-contained and compact. It is entirely automatic in action, and requires no expert knowledge or attention whatever. There is practically nothing that can get out of order—neither engine, dynamo, nor complicated mechanism of any description.

Write to-day for explanatory Booklet "B.C."—it is free on request.

W. WILLETT,

37s Sloane Sq., London, S.W.

A separate Department, under the personal management of one of the Directors, is devoted entirely to the negotiation of School Transfers and Partnerships.

No charge is made to purchasers.

OXFORD AND CAMBRIDGE LOCAL EXAMINATIONS, SUITABLE CLASS-BOOKS FOR JUNIOR AND SENIOR STUDENTS.

Mathematics and Science.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. 2s. 6d. With Answers, 3s.

"Maintains the high standard of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association*.

Algebra, Junior, Test Questions in. By FABIAN ROSENBERG, M.A., B.Sc. 1s. With Answers, 1s. 3d.

Algebra, The School. By A. G. CRACKNELL, M.A., B.Sc., F.C.P. With or without Answers, 5s.
Also in Two Parts. Part I, 2s. 6d. Part II, 2s. 6d.

"The book is compiled in accordance with the latest views on the teaching of Algebra, and we have rarely come across a clearer or more satisfactory exposition of subject-matter."—*The Journal of Education*.

Arithmetic, The Junior. Being an adaptation of *The Tutorial Arithmetic* suitable for Junior Classes. By R. H. CHOPE, B.A. With or without Answers, 2s. 6d.

"Just as good a handbook on Arithmetic as the student can desire."—*Nature*.

Arithmetic, The School (Senior Local Edition). By W. P. WORKMAN, M.A., B.Sc., Head Master of Kingswood School, Bath. 3s.
Adapted from *The School Arithmetic* for the Oxford and Cambridge Senior Local Examinations.

"The best Arithmetic for Schools on the market."—*Mathematical Gazette*.

Botany, Junior. By Prof. FRANCIS CAVERS, D.Sc. 2s. 6d.

"Dr. Cavers has achieved a useful little book."—*Journal of Botany*.

"A very excellent volume. Practical to a high degree. The diagrams are very good."—*Schoolmaster*.

Botany, The Senior. By FRANCIS CAVERS, D.Sc. 4s. 6d.
"There is abundance of experiments, with useful practical hints and directions . . . the volume is evidently the work of an accomplished teacher."—*Educational Times*.

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. Second Edition. 2s. 6d.

"The results of fifteen years' experience of a thoughtful teacher are always valuable, and, as one might have anticipated, the book offers a thoroughly sound course of practical instruction."—*Nature*.

Chemistry, Senior. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. 4s. 6d.

"We can commend the book to any student requiring a sound and clearly written textbook."—*The Journal of Education*.

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. 2s. 6d.

"A simple treatment of the elements of geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster*.

Geometry, The School. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. 3s. 6d.

A simplified edition of the authors' well known *Geometry, Theoretical and Practical*, Parts I and II, covering the ground required for the University Senior Local Examinations.

Heat, Junior. By JOHN SATTERLY, D.Sc., M.A. 2s.

"A good practical course. The diagrams are very clear, and the subject-matter all that could be desired."—*Schoolmaster*.

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 2s. 6d.

"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.

Science, Junior Experimental. By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. Second Edition. 2s. 6d.

"An excellent and workable two years' course in Experimental Physics and Chemistry."—*Educational News*.

Languages, History, and Geography.

English Composition, Junior. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 1s. 6d.

"This excellent manual makes plain for the young pupil the essentials of good writing. A distinctly workmanlike production that can be heartily recommended as one of the best of its kind."—*Education*.

English Composition, Senior Course of. By E. W. EDMUNDS, M.A., B.Sc. 2s. 6d.

"Excellent devised and arranged."—*School World*.

"Teachers of English will find this a very useful book for practical classroom purposes."—*Schoolmaster*.

English Grammar, Junior. With Parsing and Analysis. By A. M. WALMSLEY, M.A. 1s. 6d.

"The work of a practical teacher who knows the value of compromise between the old and the new methods."—*Journal of the Assistant Masters' Association*.

English Verse, An Anthology of. For use in Schools and Colleges. By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. Second Edition, Enlarged. 2s. 6d.

"The selections are admirably fitted for the purpose of presenting the course of English verse through the centuries."—*Literary World*.

English Prose, An Anthology of. For use in Schools and Colleges. By S. E. GOGGIN, M.A., and A. R. WEEKES, M.A. 2s. 6d.

"This anthology of English prose is compiled with abundant good sense. Within its limits the choice of writers could not well be bettered . . . a very useful book."—*Saturday Review*.

French Course, New Junior. By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 2s. 6d.

"The short extracts are well chosen. With a capable teacher we have no doubt that this would prove a useful textbook."—*The Journal of Education*.

French Reader, New Junior. By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. 2s.

"Consists of well-chosen literary extracts in French."—*Education*.

French Course, Senior. By Professor ERNEST WEEKLEY, M.A., and C. GILLI, B.A. 3s. 6d.

This Course is designed for candidates preparing for the Senior Local Examinations. The text is substantially that of Professor Weekley's *Matriculation French Course*, but the exercises and passages for translation into French are different.

"A really excellent textbook."—*Teachers' Times*.

Geography, Junior, 1916-17. Including Outlines of Physical Geography, the British Isles, and Europe. By G. C. FRY, M.Sc. 2s.

"A useful and well arranged elementary work."—*Guardian*.

Geography, Senior, 1916-17. Including Principles of Physical Geography, the British Isles, and Europe. From the *Text-book of Geography* by G. C. FRY, M.Sc. 2s. 6d.

"Mr. Fry brings out the fascination of the broad view of geography."—*Literary World*.

History of England, School. By M. E. CARTER, Honour School of Modern History, Oxford. 3s. 6d.

Also in three parts as follows:—I, to 1603; II, 1485-1714; III, 1660-1910. 1s. 6d. each.

"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.

Latin Course, New Junior. By J. V. THOMPSON, M.A., and LL. M. PENN, M.A. 3s. 6d.

"Admirably unites the more modern methods of teaching with those which have long stood the test of time."—*Educational News*.

Latin Course, Senior. By A. J. F. COLLINS, M.A., and ALFRED ROBINSON, B.A. 3s. 6d.

"Carefully planned and most capably worked out."—*Educational Times*.

"The book is businesslike and well arranged. The examples for translation into Latin Prose are specially well chosen, and serviceable vocabularies are provided."—*Guardian*.

Complete Catalogue of Books for the Oxford and Cambridge Local Examinations, for 1916 and 1917, post free, on application.

University Tutorial Press, Ltd., High Street, New Oxford Street, London, W.C.

Literary Supplement to
THE JOURNAL OF EDUCATION.

No. 564.

JULY 1, 1916.

THERE IS EVERY INDICATION

that an unusual proportion of Parents will this year be seeking information as to **SCHOOLS OUTSIDE THEIR OWN KNOWLEDGE OR THAT OF THEIR FRIENDS**; and this movement will not be in one direction only, since some people find themselves in a position to afford to spend more on the education of their children.

THE NINETEENTH EDITION OF

PATON'S LIST of SCHOOLS and TUTORS

will be of exceptional importance, as it will be in current use when the War is over, and children from India, the Colonies, and other places abroad, who have been kept back, will be brought home by their parents for education.

Grateful letters from parents show that we succeed in providing them with what they urgently require. Grateful letters from Principals of Schools prove that in their case also we supply a much needed want.

J. & J. PATON, **EDUCATIONAL AGENTS,**
143 CANNON STREET, LONDON, E.C.

Telephone: Central 5053.

MILLS & BOON'S NEW BOOKS.

MILLS & BOON will be happy to receive applications for Specimens from Heads of Schools and Teachers of special subjects. New Educational Catalogues sent post free.

ENGLISH GRAMMAR, WITH ANALYSIS AND PARSING.

By H. G. SMITH, B.A., Senior English Master, King Edward's School, Camp Hill, Birmingham; and G. H. BALL, M.A., Head Master, King Edward's School, Camp Hill. 1s. 6d.

ENGLISH COMPOSITION, INCLUDING PRÉCIS AND PARAPHRASE.

By H. G. SMITH, B.A., and G. H. BALL, M.A. 1s.

These books have been written with a view to providing a course in English Grammar and Composition suitable for use in secondary schools. They aim at explaining the fundamental rules of the language and making clear the difficulties which teachers of Latin and French experience in imparting a knowledge of their subjects to young boys.

☞ The above two books are issued in one volume entitled "English Grammar and Composition," and form a three years' course in English. 2s.

POETRY FOR BOYS.

By STANLEY MAXWELL, M.A. 1s. 6d.

A collection of poems of established literary merit printed in bold type.

"Such is the superiority of Mr. Maxwell's collection over every other similar kind of work we are acquainted with that not the least apology is due for its appearance. The selections have been made with a fine discernment of what will appeal to the interest of boys."—*Secondary Education*.

THE MERCHANT OF VENICE.

With revised Text, Questions, Notes, and Appendixes. By G. H. BALL, M.A., and H. G. SMITH, B.A. 1s. Text only, 6d. net.

"The chief feature of this edition is the series of appendixes which is admirably contrived. Notes, suggestions for character study, and essay writing thereon, short expositions of all outstanding features of interest, and a set of examination papers, old and new, are provided, and are of invaluable help to the earnest student. The text is in good plain type."—*Times*.

SHAKESPEARE'S KING HENRY V.

Edited by the Rev. C. R. GILBERT, M.A. 1s. Text only, 6d. net.

"Differs from the usual school editions in that all the helps are placed in the book after the text. These helps are of a thoroughly useful and workmanlike matter."—*Educational News*.

FRANCIS CHANTREY: DONKEY BOY AND SCULPTOR.

By HAROLD ARMITAGE. Illustrated. 1s.

A wholly delightful reader for pupils of 10 to 12.

EXERCISES IN FRENCH FREE COMPOSITION FOR UPPER CLASSES.

By R. R. N. BARON, M.A., French Master, Cheltenham Grammar School. 185 Exercises. Fourth Edition. 1s. 6d.

A REFORM FIRST FRENCH BOOK.

Especially written for the use of Adult Students. By J. STUART WALTERS, D. ès L. Illustrated. 1s.

DIRECT METHOD FRENCH TEXTS

Edited by R. R. N. BARON, M.A.

"We welcome another publisher starting a series of Direct Method French Texts, and congratulate him on his editor, who has performed his task in a way which will please every reform teacher. They are well suited for use in schools. We wish success to this new Series."—*School World*.

TAMANGO and JOSÉ MARIA LE BRIGAND. By PROSPER MÉRIMÉE. Second Edition. 1s.

TAMANGO alone, 4d. net. (Set Book for the Middle Grade Irish Intermediate Examination, 1916.)

PIERRILLE. By JULES CLARETIE. Second Edition. 1s. 6d.

BUG JARGAL. By VICTOR HUGO. 2s.

LA BELLE NIVERNaise. By ALPHONSE DAUDET. Second Edition. 1s. 6d.

TRISTAPATTE ET GORET, ET AUTRE OONTES. 1s.

AN INTRODUCTION TO HEAT.

By ARTHUR R. LAWS, B.Sc., and GEORGE W. TODD, B.A., D.Sc., Science Masters at the Royal Grammar School, Newcastle-on-Tyne. With 106 diagrams. 2s. 6d.

The main idea underlying it is that boys are gifted with a large amount of curiosity, and that when they once realize that there is something behind many of the phenomena of everyday life they are prepared to take a good deal of trouble to satisfy their inquisitive instincts.

OUTLINES OF APPLIED PHYSICS.

By H. STANLEY, B.Sc., Lecturer in the Merchant Venturers' Technical College, Bristol. With 75 Diagrams. 2s. 6d.

"In the main a series of examples in theoretical physics, for not only are there numerous numerical exercises at the end of each chapter, but more than four hundred of a miscellaneous character at the end of the book. The book will probably be found quite useful."—*Nature*.

FIRST SCHOOL BOTANY.

By E. M. GODDARD, B.Sc., Science Mistress, Girls' Secondary School, Colchester. With 207 Diagrams. Crown 8vo, 2s. 6d.

"An excellent combination of practical exercises and clear explanations, illustrated by good bold outline drawings. The pupil who works conscientiously through the physiological experiments, and laboratory and field observations described in this small volume, will have won something better than examination successes."—*Nature*.

The book covers the syllabus of the Oxford and Cambridge Junior Local Examinations.

NOTES ON THE GOSPEL ACCORDING TO ST. MATTHEW.

With Questions and Concordance for the Use of Schools. By the Rev. C. R. GILBERT, M.A. With 3 Maps and an Illustration. Crown 8vo. 1s.

EXAMPLES AND TEST PAPERS IN ALGEBRA.

By W. J. WALKER, M.A., Head Master of Woodhouse Grove School, Apperley Bridge, Bradford. With or without Answers. 2s. 6d.; and in two volumes each 1s. 6d. with Answers, or 1s. 3d. without Answers.

"There are plenty of mental or oral questions and test papers. The type is large, and most left-hand pages begin with a new exercise. The examples are for the most part original, and are carefully arranged."—*Mathematical Gazette*.

PREPARATORY ARITHMETIC.

By F. C. BOON, B.A., Principal Mathematical Master at Dulwich College. Second Edition. With Answers, 1s. 6d.; without Answers, 1s. Answers separately, 6d. net.

A revised and enlarged edition of this well known book. A large number of new examples have been added, and the few misprints in the first edition corrected.

A FIRST SCHOOL CHEMISTRY.

By F. M. OLDHAM, B.A., Senior Science Master at Dulwich College. With 71 Illustrations. Fifth Edition. 2s. 6d.

GRAPHS IN ARITHMETIC, ALGEBRA, AND TRIGONOMETRY.

By W. J. STAINER, B.A., Head Master of the Municipal Secondary School, Brighton. With 120 Diagrams. 2s. 6d.

LATIN EXTRACTS FOR SIGHT TRANSLATION.

With Hints to Beginners. By G. H. BALL, M.A., Head Master of King Edward's School, Camp Hill, Birmingham. 1s.

THE NEW PRELIMINARY GEOGRAPHY.

By H. B. WETHERILL, M.A., Head Master of Allahabad High School. Fourth Edition revised to September, 1915. With Illustrations and 19 Diagrams. 1s. 6d.

MILLS & BOON, LTD., 49 RUPERT STREET, LONDON, W.

London: WILLIAM RICE, Junior, 3 Broadway, Ludgate Hill, E.C.

REVIEWS AND MINOR NOTICES.

SOME BOOKS ON RUSSIA AND RUSSIAN.

- (1) *A Thousand Years of Russian History.* By SONIA E. HOWE. (7s. 6d. net. Williams & Norgate.) (2) *A Short History of Russia.* By LUCY CAZALET. (2s. Oxford University Press.)

(1) Mrs. Howe—a lady of Russian birth, and the wife of an English clergyman—has produced an attractive volume, which surveys in a popular and interesting way the wonderful history of Russia for the last thousand years, and also provides chapters on the Cossacks, the Baltic Provinces, Poland, and Finland.

The story told is one of entrancing interest, and is both tragic and romantic. Ninth-century Russia consisted of loosely organized communities, whose principal centres were Novgorod and Kiev. The latter city, however, gradually gained the ascendancy, especially through its famous princes, Oleg and "sunny" Vladimir (980–1015). The romantic story of the introduction of Christianity into Russia by Vladimir is well known. Having received the representatives of various religions—Mohammedans from Bulgaria, Jews from among the Khazars, Catholics from Germany, and a monk from Greece—he was most impressed by the last, and the following year sent delegates to visit the various centres. Arrived at Constantinople, they were taken to the splendid church of St. Sophia, where the Liturgy was sung by the Patriarch, surrounded by his clergy, in gorgeous vestments, amid numberless lights and incense, and with every accompaniment of solemn and impressive ceremonial. The envoys were profoundly impressed. "There is nothing else like it on earth," they said; "there, in truth, God dwells with men, and we can never forget the beauty we have seen." Vladimir, having decided to make Christianity, in its Greek form, the national religion, caused all his people to be baptized in the rivers.

Russia received both her religion and her civilization from Byzantium. This is a fact of cardinal importance for understanding the history. The Byzantine tradition has never died out, and the conviction is passionately held by all the Russians that Russia's destiny is to redeem the city of Constantine from the power of the Turk. Another significant factor which must be grasped is "the vital importance of the Mongol invasion, with its destructive, arresting, and retarding influence on the country's progress and civilization." The Tatar domination had begun by 1240, and it continued for 240 years. It produced, however, one good result in welding the Russian people together.

Chapter IV is devoted by Mrs. Howe to a sketch of the growth of the Muscovite Empire (1462–1598). It was the Grand Prince of Moscow who wrought deliverance from the Tatars, and the Metropolitans had already settled in Moscow in 1325. The present dynasty, as is well known, began its imperial career in 1612, when Michael Romanoff, son of the Patriarch Philaret, was chosen Tsar. The authoress remarks:—

Mikhail Romanoff was chosen Tsar, not on account of any special virtue in himself, but because of the popularity enjoyed by his family, which some three hundred years previously had come over to Muscovy from Prussia, at the time when that country was still inhabited by Slavs. The Romanoffs had an unstained record and, although only entitled Boyars, their position had never been questioned by their peers. Their integrity, love of learning, and charm of manner had made them popular in each successive generation.

The fortunes of the new dynasty, which derived its position from popular election, and of Russia, are traced in further interesting chapters—two being devoted to Peter the Great ("the Europeanizer of Russia") and his reforms, and two to the great Catherine II—and the story is brought down to the liberation of the serfs in 1862. A "Link" of five pages provides dates and indications of more recent events, down to 1915. A word of praise must be given to the maps and illustrations.

(2) The *Short History*, by L. Cazalet, gives a brief résumé of the principal events and personages of Russian history in

clear outline. There are some good illustrations and a map. The authoress, who belongs to a well known Anglo-Russian family, obviously knows Russia and the Russian atmosphere very well.

First Russian Book. By NEVILL FORBES, M.A., Reader in Russian in the University of Oxford. (2s. 6d. net. Oxford University Press.)

This admirably arranged manual, by an accomplished philologist, meets the needs of the beginner in Russian in a thoroughly adequate way. Difficulties are not shirked, and real help is afforded. The writer explains that his book "is intended as a practical means of acquainting the student of Russian with the first difficulties of the language, which are the case-endings." Very few verbs are dealt with here, "the terrors of the Russian verb" being "reserved for the second book." The plan adopted is an eminently practical one. After introductory chapters on the alphabet and pronunciation, the student is introduced to some easy phrases without verbs, some "useful" adverbs, and the verb "to be." Then the case-endings are dealt with in connexion with substantives, pronouns, and adjectives. An excellent feature is the ample illustrative use of vocabularies and collections of phrases throughout. The use of prepositions is also illustrated and explained in the same way. The student is helped by a generous employment of transliteration, and the accent is marked throughout.

In order to gain a real knowledge of so difficult a language as Russian there is no royal road. But difficulties will be surmounted by the methodical and patient use of such a manual as this, and its sequels. It is much to be hoped that the study of Russian will be seriously and widely taken up in England. If this is done, it will yield a rich harvest in many directions.

Collected Papers on Analytical Psychology. By C. G. JUNG. Translated by Dr. CONSTANCE E. LONG. (12s. 6d. net. Baillière, Tindall, & Cox.)

On page 206 of this work we read "Psychoanalysis is not only scientific, but also technical in character, and from results technical in their nature has been developed a new psychological science, which might be called 'analytical psychology.'" It might, of course. But Prof. Stout was already in the field, and English readers, at any rate, will feel that he has the prior claim. But, after all, there is no copyright in titles, so Dr. Jung has no doubt some justification for attaching a new meaning to the term "analytical psychology." This claim would have been much stronger, however, had he written a systematic work on the subject. There is certainly room for such an exposition of all that underlies psychoanalysis. English readers who are interested in this subject will welcome the book, for there is a very general desire to know what it all means. We have continual references to it in connexion with both medicine and pedagogy. But there is no accredited and exhaustive treatment of it in English. The present work consists of reproductions of various articles and addresses written and delivered in diverse connexions. The first chapter is the longest, and deals with the psychology and pathology of so-called occult phenomena. But the lay reader would be well advised to begin with Chapter II, which deals with the Association Method, and follow this with Chapters VII and VIII, treating of psychoanalysis itself.

Dr. Jung is keenly sensitive about the suspicions with which his subject is regarded by the general public—suspicions that are probably stronger in this country than in either Austria or Switzerland. "There are so many misconceptions of the matter, so many prejudices against certain psychoanalytic views, that it becomes an almost impossible task to reach mutual understanding in public discussion." If this is true in addressing an international Medical Congress, we are not surprised to find the apologetic tone adopted in addressing a general audience at Clark University: "The report of the following case will appear strange, incomprehensible, and perhaps unacceptable to you. I beg

you, however, to defer your final judgment, and to enter upon the consideration of these new subjects with a kindly disposition, for such pioneer work in virgin soil requires not only the greatest patience on the part of the investigator, but also the unprejudiced attention of his audience." It is to be hoped that the reader will give this unprejudiced attention, for Dr. Jung claims that his psychology offers "more value for practical pedagogy than the physiological psychology of the present."

It is well known that Jung has broken away from the more extreme positions of his master, Freud, and is therefore more likely to appeal to English thinkers. For Freud the dream is essentially a symbolic veil to cover repressed desires, and these desires are usually so nasty that his *Traumdeutung* forms a work that nobody would care to leave lying about for casual readers to dip into. Jung's view is that "the dream is, in the first instance, the subliminal picture of the psychological condition of the individual in his waking state." His work therefore consists of a careful study of what goes on in the subconsciousness, and the method of this study is psychoanalysis. Dr. Jung is eminently sane in his views about the technique of his analyses. He is almost vehemently opposed to any attempt to exercise influence on the patient during the process of examination. There must be no attempt to follow any systematic course in a psychoanalytic investigation. He italicizes the statement, "*So-called chance is the law and the order of psychoanalysis.*" The application to school work is obvious. Those who promote direct moral instruction will get very little comfort out of these pages.

But this is not the only point at which Dr. Jung's theories bear directly on the work of education. In a sense, the whole book is educational. Teachers may not like the things old and new that he produces out of the subconsciousness of little children, and sometimes, in spite of their best efforts to be unprejudiced, they will feel that he is carrying his deductions too far, but they will be made to feel that they turn away from his warnings at their peril. He is free from the rather flippant way some of our young English psychoanalysts have of talking of the "unc"—their pet name for the subliminal manifestations of the ego. It is true that many of his illustrations appear trifling. Individually they seem sometimes almost silly; but they have a curiously cumulative effect. Even the most case-hardened, anti-Freudian can hardly fail to concede, as a result of reading the book, that "there is something in it." Few English teachers will be willing at present to go much farther, and the Freudians do not help matters much by the peculiar attitude they sometimes adopt. Freud himself said to Jung on one occasion: "I first became clearly conscious of the value of my discoveries when they were met everywhere with resistance and anger; since that time I have judged the value of my work according to the degree of opposition provoked. It is against my sexual theory that the greatest indignation is felt, so it would seem therein lies my best work." Good enough as an epigrammatic retort, but Dr. Jung seems to take it more seriously, for, at the close of an interesting chapter on New Paths in Psychology, he points out that there is a great ferment at present about the possibilities of psychoanalysis, and that accordingly "something of great importance is taking place here, since the learned sections of society, as is usual at first, meet it with violent resistance." Surely this is going a little too far. It may be true that learned people very often oppose good ideas because they are new, but it hardly follows that such opposition proves that the ideas opposed are good.

(1) *The European Anarchy.* By G. LOWES DICKINSON. (2s. 6d. Allen & Unwin.) (2) *Towards International Government.* By J. A. HOBSON. (2s. 6d. Allen & Unwin.)

These are companion volumes and their contents may conveniently be considered together. Mr. Dickinson's title is significant of the contention of both of them—that wars can only be prevented by the institution of some machinery for

settling disputes among the States of Europe which shall be supported by force. With much that he says with reference to the present War we heartily concur; as, for instance, his assertion that for the last four centuries British imperialism has guaranteed the independence of the European States, that England has no desire to wage wars of conquest; that Sir Edward Grey has shown himself an extremely pacific foreign minister, and that the national vanity of the Germans has been cultivated until it has become a powerful support to a party in the Empire which was bent on aggression. At the same time we consider that he writes too much as though the other States now belligerent were more or less similarly responsible with Germany for the present war; and he attaches more weight to the Belgian despatches than we think warranted, seeing that, as he allows, they have been edited for publication by German authority. The opinion that the policy of the Entente and the strength of the British Navy caused Germany to believe herself endangered, that this belief led to arming and counter-arming until the strain became intolerable, and that Germany went to war because she expected to be attacked does not commend itself to us. There was no coalition against Germany before the War, no State thought of attacking her, and that German statesmen know. We are told that in August, 1913, the Kaiser certainly desired peace, for the Cabinet of Berlin prevented Austria from attacking Serbia immediately after the treaty of Bucharest. He did so, but we do not admit that that proves anything save that the moment was not opportune for the use of the mailed fist. Austria had let the time for intervention pass by, and after events force us to connect the decision of the German Cabinet with the facts that at that time the new increase of the German army had not fully taken effect, and that the widening of the Kiel Canal so as to admit the passage of ships of the Dreadnought type was not completed. A better opportunity for the prosecution of German policy in the Balkans was presented by the Sarajevo crime, which, Mr. Dickinson believes, so horrified the Kaiser that he no longer resisted war. It came at a convenient season for Germany; but even "at the last moment," he tells us, referring to Baron Beyens, that the German Government made "one more effort for peace." It is not so that we understand the diplomacy which immediately preceded the War. Germany would not listen to Russia's proposal for arbitration by The Hague tribunal, refused England's proposal for a conference, did not respond to her invitation to suggest terms of settlement, and when Austria appeared inclined to discuss terms declared war on Russia so promptly as to anticipate Austria's declaration by five days. While, however, we differ on several points from Mr. Dickinson's view of events, we do not deny his conclusion that war will not cease from troubling Europe from time to time so long as its States do not submit to a peaceful settlement of their disputes by some institution entrusted with power to coerce any State which would appeal to force. European anarchy would then give place to international government.

Is such a change possible? Mr. Hobson contends that it is, and his book develops his scheme for such a government. He proposes that after the present War, which he says should not be ended on terms humiliating to Germany, the States of Europe should form a "League of Peace," which should insist on disarmament and the settlement of differences by peaceful methods. As to the machinery by which the League should carry out its object, he suggests the establishment of a permanent court of international arbitration for the decision of all disputes relating to treaties, international law, and concrete facts: even disputes affecting vital interests or national honour—in a word, the conversion of The Hague framework into a permanent court of arbitral justice. Then, as there are many international questions not capable of judicial arbitration, he would have a Commission to inquire whether a dispute should go before the Court or be referred to a Council of Conciliation. This Council should recommend terms of settlement. Men of the type now employed on embassies or in foreign offices are not to be included in its personnel; their education at public schools and Universities, and the allowances of not less than

£400 a year which they receive from their fathers, are among the disqualifications which unfit them for such work. If, in spite of the recommendations of the Council, a State should continue violently to oppress or injure one of its neighbours, or breaks the peace of Europe, it should be coerced by the rest of the confederate States, either by a boycott or, if that proves ineffectual, by arms; for even in Mr. Hobson's reformed Europe war seems still to remain the ultimate appeal. For this purpose an executive is to be created, at whose command each confederate State is to be bound to furnish its quota of land or sea force. Mr. Hobson believes that "a proud and self-respecting State" will not refuse thus to surrender its sovereignty into the hands of a non-national committee. Nor does he apprehend that his European confederation might be brought to nought by such highly probable events as we venture to suggest, using letters in place of names of existing States. A. grievously injures B., disregards the recommendations of the Council of Conciliation, and either breaks the peace or imperils B.'s vital interests by repeated injuries. The Executive of the Confederation calls on its members, C., D., and E., to punish A.; but C. and D. decide that their national interests demand that A. should be supported, tear up the scrap of paper which binds them to the League of Peace, array their forces against any that the International Executive can muster, and another European war follows. Such events would, we allow, be impossible if the policy of States were determined solely by philanthropic and other moral motives, and if national interests and feelings gave place to "the international mind." This change, we are told, might be expected if executive power was exercised directly by democratic assemblies—the worst places, one would think, for the debate and decision of foreign affairs—for democracies are averse from war. Has Mr. Hobson never read the history of France in 1792-93? In short, we may hope for a super-State—an international government which will preserve Europe from the curse of war—when the foreign affairs of all countries are directly subject to democratic control.

A Short History of Europe, 1806-1914. By CHARLES STANFORD TERRY, Professor of History in the University of Aberdeen. (6s. Routledge.)

Prof. Terry here brings to a successful conclusion his *Short History of Europe* from the extinction of the line of Roman emperors in the west in 476, of which the two earlier volumes already occupy an honourable place among historical works of an educational kind. The date he places on his title-page as that at which his present volume begins has doubtless been decided by the starting-points of its two predecessors, but, though the years 476 and 1453 are marked by changes of the highest importance in European history, the declaration in 1806 that the Holy Roman Empire had ceased to exist wrought no change in the course of events; it was merely the formal announcement of the death of an institution which had long lost all vitality; and, as a matter of fact, this volume may be said to begin at the more significant date, 1804, the year in which war was renewed after the Peace of Amiens and Napoleon assumed the imperial crown. The task accomplished here is one of extreme difficulty, for, though the reaction which followed the overthrow of Napoleonic dominance gave European politics some unity, it was not long before a revolt was made against the attempt to keep, by force if necessary, the states of the Continent under a kind of moral directorate, and each was left to work out its own destiny. With the failure of the Holy Alliance, the interrelations of European states become complex and difficult to expound, especially in a comparatively small volume. Nor is this all, for many of the domestic affairs of the principal states demand notice either by reason of their own importance or of their bearing on international politics. Arrangement and selection are, therefore, the primary conditions of success in a work of this nature. In the arrangement of his matter Prof. Terry seems to us to have shown more than ordinary skill. That he should have avoided all repetition was not to be looked for, nor indeed would it have been desirable, for events told in one connexion must be

referred to if they influenced some other political condition. But it would certainly be difficult to improve on the plan on which this book is written. Its main divisions may be described as the close of the Napoleonic wars, the dominance of the Holy Alliance, the revolutions of 1830, the period of liberalism and the awakening of nationalities to consciousness and desire for unity ushered in by the widespread upheaval of 1848, the growth of the power of Prussia, and, lastly, the prelude to the present War. In each of these main divisions, which are not stated as such by Prof. Terry, he has chapters on special subjects, as for example when engaged on the events consequent on the revolutions of 1848 he gives separate chapters to the effects of the political unrest in different states, the German *Nationalparlament*, the second Napoleonic empire, the Crimean War, and the progress and completion of the freedom and union of Italy.

In his selection of matter he is not, perhaps, so successful as in its arrangement; parts of his book would have been more readable and more useful—though not, of course, so full of valuable information—if some facts had been omitted, and more room devoted to insistence on the significance of those that it was necessary to record. However, as it is the book is a thoroughly good one, generally accurate, well written, and showing a firm grasp of European political history during the last hundred years, and more, for it goes down to the Italian declaration of war against Austro-Hungary.

As an instance of Prof. Terry's power of exposition we may point to his account of the efforts made in Germany in 1848-49 to create a single federal state with a national constitution; the opposition of Austria, which insisted on the admission of the non-German elements in its empire, and refused to accept the proposal that the Prussian king should be the head of Germany, with the title of Emperor. He goes on to tell us how Austria suppressed the nationalist movements among Czechs, Slavs, Hungarians, and Italians, defeated the German scheme of federal reform, and re-established the old Confederation and her own place in it. Seventeen years later Prussia's victory at Königgrätz avenged her humiliation, a Federal State was substituted for the Confederation of 1815, and her hegemony was ensured; her position was invested with a new dignity when, in January 1871, the *Bund* became the *Reich* and the King of Prussia the *Deutscher Kaiser*. The chapter recording the successful struggle for Italian freedom and unity is written with vigour and sympathy, and does justice to the splendid work of Cavour, who, "though he worked in the background, was not the less the architect" of the kingdom of Italy. We turned with especial interest to the two last chapters, which deal with events closely connected with the present War; they are an excellent guide to the foreign policy of Germany since the retirement of Bismarck in 1890. A slight confusion in the review of Balkan history, however, is caused by a repeated error, which misdates by three years the war of 1885 between Serbia and Bulgaria. Southern Bulgaria—or Eastern Rumelia, as it was called—declared its union with Bulgaria under Prince Alexander in the September of that year. Serbia, instigated by Austria, claimed "compensation" for Bulgaria's gain, and King Milan declared war two months later. He was defeated at Slivnitsa, but Austria compelled Bulgaria to desist from the war and agree to the treaty of Bucharest. This, however, is of little importance as regards later developments in the Balkans, which are clearly and accurately recorded.

Life of Sir Philip Sidney. By Prof. M. W. WALLACE.
(10s. 6d. Cambridge University Press.)

It is a remark of Emerson's that there are some historical characters whose greatness in the eyes of their contemporaries is not accounted for by the records of them which we possess, and he instances, amongst others, Washington, Mirabeau, and Chatham. Of the Elizabethans, Raleigh, Essex, and Sidney, he says "they were men of great figure but few deeds." This is certainly true of Sidney. His actual achievement was small. One or two missions to foreign Courts, a few months at the Ordnance Office, where he worked hard, but whether successfully or not we do not know, and ten months' fighting in the Low Countries com-

plete the tale of his labours in active life. But of the impression he made upon his contemporaries there can be no doubt. When he went to Paris with a political mission at the age of eighteen the King of France gave him the title Baron de Sidenay. The Prince of Orange, according to Fulke Greville, considered him "one of the ripest and greatest counsellors of estate that lived in Europe." Spenser dedicated to him his *Shepherd's Calendar*, Hakluyt his first book of *Voyages*, and Giordano Bruno two of his treatises. Burghley, says Prof. Wallace, loved and admired him from his earliest years, and with Walsingham, whose daughter he married, his relations were very close. Even Mendoza, the Spanish Ambassador, bewailed his death and spoke of the "poor widow England, that having been many years in breeding one eminent spirit, was in a moment bereaved of him." He was adored alike by the soldiers at Flushing, by the poets of England, and by the ladies of the Court. The Queen stood from him what she would hardly have stood from anyone else. Much of this admiration was due, no doubt, to great personal charm, but we find it more difficult to understand the eulogy of the Prince of Orange. For, if Fulke Greville is to be trusted, Sidney was in politics a dreamer rather than a practical statesman. His schemes for raising all Europe against Spain and the Pope were merely castles in the air; his plan for planting an English colony or fortress on the coast of South America to harass the Spaniard was not calculated to be successful. It is noticeable that Drake seems to have fought shy of his partnership in the expedition of 1585; the point is not clear, but our biographer agrees with us in this opinion. Yet politics was the main interest of Sidney's life—a fact which Prof. Wallace brings out with scarcely sufficient clearness. He learnt little or no Greek at Shrewsbury School, and when he studied it later it was in order to read, not the poets, but Aristotle. When he travelled in Italy it was men, far more than art, that interested him. Italy, indeed, he looked upon with the eyes of the Elizabethan; it was "the rotten member which has so long infected the whole Christian body," and if the Turks got it so much the better, because "it would so ensnare them with all its vile allurements that they would very soon fall down of themselves from their high place." To a man so fashioned literature was merely by-play, and, with adequate openings for an active life, we might never have had *Astrophel* and *Stella*. Yet he had a genuine literary gift, not only for poetry but for prose, for *Arcadia* is one of the first English books written in a good prose style; and he is, perhaps, a unique instance of a man who, while caring less for literature than for an active life, attained to a higher place in the former.

The ethical element in Sidney's nature was stonger than the æsthetic, and he was so sworn to the service of his Queen, his country, and Protestantism that he counted all else as "toys." He would have thought that a life devoted to writing poetry was wasted. Yet it is really by his poetry that he lives. Except for that, he is merely a splendid tradition. The world knows nothing of his work but one golden story, and nothing of his prose but one ringing sentence. The *Defence of Poesy* charms us with its high spirit and its boyish enthusiasm, but its value as criticism is small, and it was unfortunate that its strictures on the lawlessness of the English drama were written only a few years before Marlowe and Shakespeare blew the critics sky-high. Few there be that can read *Arcadia* nowadays. But *Astrophel* and *Stella* lives. Prof. Wallace, agreeing with Mr. J. A. Symonds and Mr. A. F. Pollard, thinks a genuine emotional experience underlies the sonnet sequence. Sir Sidney Lee, we notice, seems to have wavered in his view in recent years, for, in the *Dictionary of National Biography*, he speaks of the work as "portraying with historical precision the course of Sidney's ambiguous relations with Lady Rich," but, in the *Life of William Shakespeare* he says cautiously: "A few of the sonnets are commonly held to reflect the heat of passion which the genuine intrigue developed." The question has all the charm of an insoluble conundrum. Prof. Wallace believes

that Sidney loved Penelope; that her ill-assorted marriage with Lord Rich raised his passion to a white heat; that for a time he indulged that passion, believing it to be a good and noble thing, but that the mood did not last long, and he attained finally to self-mastery. There was never any intrigue in the ordinary sense of the word. This theory does not commit us to believing that all the sonnets, including those inferior poems which are nothing but bundles of fantastic and frigid conceits or acrobatic feats of distorted thought, are autobiographical; indeed, our author considers that some were written frankly as literary exercises.

Of Sidney's education at Shrewsbury and Oxford, Prof. Wallace gives a good account, and tells us more than any former biographer; he also gives us some extracts from his letters to his brother Robert, which contain his views on the upbringing of a young man who is destined for public life. For such a youth Philip desired a culture which would be useful in the proper sense of that much-abused term: "So you can speak and write Latin, not barbarously—I never require great study in Ciceronianism, the chief abuse of Oxford, 'qui, dum verba sectantur, res ipsas negligunt,'" he writes. If he travels it must be to study the political conditions of each country and to know "multos hominum mores et urbes." France, Spain, and Germany are the important countries; with Italy we have nothing to do but buy its silk and wine. History again must lead up to politics. Arithmetic and geometry he desires him to study that he may get a sense of proportion—at least, so we interpret—"so as in both number and measure you might have a feeling and active judgment." Of purely ornamental accomplishments we hear nothing, and that though the writer was a courtier; the object of all study is to fit a man for the service of his country. It is a view of education which was never more needed than now.

Prof. Wallace's book is a very complete account of Sidney, both as a man and author. He might have made it an even more perfect picture by including more extracts from Sidney's letters to Languet, which bring us nearer to the real man than any modern writing can do. Our biographer is not afflicted with *lues Boswelliana*. His estimate of his hero is always sane and sober. Indeed we think he underrates his moral character when he says: "Of his faults we could sum up a formidable list," for the only serious weakness we can find in him is that extravagance in money matters which was the besetting sin of his age. On the other hand, he probably overrates his abilities when he says that, had circumstances been a little different, Sidney "might have been known as a founder of our Colonial Empire."

Poems of To-day: an Anthology. (2s. net. Published for the English Association by Sidgwick & Jackson.)

This volume of post-Victorian poetry is a tantalizing anthology; of the greater lights there is not enough to gauge their range, and of the lesser lights there are fragments that make us keen for more. It has been compiled that boys and girls may know something of the poetry of their own day, but there is not much to thrill the hearts and stir the pulses of the young, and it will appeal more to men and women. The 147 pieces selected are a fair sample of the minor poems of this century, though difficulties of copyright have prevented the inclusion of T. E. Brown, Thomas Hardy, W. E. Henley, and we may presume that the same consideration accounts for the exclusion of other names that will be missed. Sir Owen Seaman, Andrew Lang, James Rhoades, Austin Dobson, Norman Gale, A. P. and C. L. Graves would assuredly have contributed each a gem; and E. E. Bowen's Harrow poems are as characteristic as any of the age.

Nor can the number of poems allotted be taken as any indication of the respective ranks and importance. Robert Bridges and R. L. Stevenson have 11 each; Mrs. Meynell, 9; W. B. Yeats, 8; Laurence Binyon, 7; J. Masefield and F. Thompson, 7; Sir H. Newbolt, 5; G. Meredith, 4; William Watson and Rudyard Kipling, 2.

The intention, we are told in the Prefatory Note, has

been to represent those poetic tendencies which have become dominant as the influence of the accepted Victorian masters has grown weaker, and from which the poetry of the future must take its start; but the young student is left to discover for himself what these tendencies are, and the tripartite division into poems of the past (the romance of English history), poems of the earth (of English homes and the familiar countryside), and, lastly, poems of life itself (of life and death and immortality) does not help us much. The three strands are so inextricably blended that in most cases it is impossible to disentangle them. It is the meanest flower that blows which brings to Wordsworth the thoughts that lie too deep for tears.

It would be presumptuous to attempt a task that Dr. W. P. Ker and the Committee of the English Association have declined, but we may venture to jot down a few reflections suggested by a perusal of the specimens before us. First, then, we should be led to conclude that the true historic poem, the tale of doughty deeds, the ballad of Tennyson and Browning, is a thing of the past. Instead, we have meditations on the days that are no more. In No. 1 Walter de la Mare muses in *March*, "through what wild centuries roves back the rose," and every drop in the running rill is "as wise as Solomon." In No. 2 Frances Cornford lies upon the shore and dreams that she holds in "pre-pelagian hands" the shining—small grains of sand. In No. 3 John Masefield builds again the City of the Soul that rose on the ruins of Troy, the submerged Atlantis. The thoughts of the Atlanteans are golden birds—elemental birds, which fly as singing flames to busy camps and marts, and perch upon the boughs of human hearts. These are conceits, and a too evident hunting of the letter; but we are not criticizing the workmanship, which is often admirable, and only concerned to detect the distinctive note. Literary, Alexandrian, metaphysical (in the Johnsonian sense) are the epithets that first occur to us, and we see the same tendency as in the French Symbolists. The boy and girl, at any rate, will pass with a sense of relief to No. 11, the grand ballad in the Devon tongue of *Drake's Drum*.

Lyrics of To-day would be an exacter title, for longer poems are not represented even in extracts, Meredith's *Love in a Valley* forming the sole exception. Hackneyed poems also are avoided, and we are grateful for being introduced to several new to us. To appraise the poetic genius of the age we must have before us plays and dramas like *The Dynasts*, a distinctly new departure. To hope that there is "nothing which may not bear translation into any European language" is a fond aspiration; there are untranslatable humours, like the racy *Roundabouts and Swings* of P. R. Chambers, and elegant trifles like the jibe at the fat lady who walked the meadows in gloves; but we may say of the volume, "Sunt bona, sunt quaedam mediocritas, sunt mala pauca." An appendix giving dates of authors and the titles of their works would add to its value.

RELIGIOUS THOUGHT AND THE WAR.

- (1) *The Challenge of Christianity to a World at War.* By E. GRIFFITH-JONES, B.A., D.D. (2s. 6d. net. Duckworth.) (2) *Religion and the War.* By F. R. BARRY, M.A. (1s. net. Methuen.)

(1) Dr. Griffith-Jones's volume is a weighty and well considered contribution to the consideration of the difficult problems raised in the realm of religious thought by the War. In a series of eight chapters he discusses (1) "The Challenge to Faith—the Problem of Providence"; (2) "The Challenge to Civilization—the Problem of Naturalism"; (3) "The Challenge to Morality—the Problem of Christian Ethics"; (4) "The Challenge to the Home—the Problem of Population"; (5) "The Challenge to Nationalism—the Problem of Patriotism"; (6) "The Challenge to Militarism—the Problem of War"; (7) "The Challenge to Militarism—the Problem of Peace"; (8) "The Challenge to Religion—the Problem of Reconstruction." The book is primarily written, as the author explains, "not for the wider public, but for those who still believe in the Gospel of Jesus Christ, but who are in sore

perplexity how to adjust their faith to the situation that confronts them."

It has become a vicious habit among even Christian thinkers to view Christianity as being face to face with the challenge of the modern world, rather than *vice versa*. It is Religion that has become a problem to many of us, not civilization, or modern culture, or the new thought. Our postulates are not those of faith but of reason, or rather of criticism. So firm and immovable have the assumptions of physical science, and of the new Biology, Psychology, and what not, come to be considered, that the profound realities of the spirit, in virtue of which alone we are given our small opportunity of bringing the Universe to book, are tested by categories that belong to the laboratory, the classroom, or the market-place—methods which end in evaluating the highest reality in terms of the lowest, God in terms of the universe, personality in terms of organism, mind in terms of matter, with the resulting impoverishment of all values, and the establishment of a false standard of judgment for all things divine and human. It is time to reverse this process.

This is the right method, from the religious point of view, of approaching the problem, and Dr. Griffith-Jones's answers to the difficulties that exist are well worth serious consideration. One of the most interesting chapters in his book is the second, where he examines the distinctive principles that underlie modern civilization. He shows that there is a good deal of false philosophy here which was bound to issue in the present catastrophe. Discussions of this sort are timely in view of the difficult work of national reconstruction that lies ahead of us all.

(2) Mr. Barry's small volume deals with some of the same themes—e.g. Christianity and Nationalism, and evil and the divine Providence—but in a slighter way. His distinctive note is insistence on the need of deeper vision and spirituality in organized Religion. This is profoundly true. Too often the clergy are involved in a mass of parochial machinery which makes it impossible for them to deliver a real "message." Mr. Barry truly says: "Our generation is not antagonistic to religion; it is literally crying out for it." The men who "have seen God face to face in Flanders" will, when they return, want something "far more spiritual" than is often offered. There must be far more leadership, intellectual, moral, and spiritual, in the clergy if organized religion is to make any great appeal to such men. If the laity generally will only revise their conceptions as to the functions of the clergyman and realize that, "if he is to study and to pray, he must be set free from the dissipation of energy involved in parochial organization" we may hope to see real leaders springing up in the religious world.

Diatessarica: the Fourfold Gospel. Section III: *The Proclamation of the New Kingdom.* By E. A. ABBOTT. (12s. 6d. net. Cambridge University Press.)

Dr. Abbott continues to pour forth, with an industry which can only be described as amazing, volume after volume embodying the results of his minute research work on the Gospels. Like all its predecessors, the present contribution is a monument of painstaking and exact scholarship. Even when his arguments may fail to convince, the discussion is always full of keen analysis and illuminating suggestion. The main object of Dr. Abbott's elaborate work (of which the present volume is only a part) is to define and determine the relation of the four Gospels to each other. The author, accepting the priority of the second Gospel, which he regards as a primary source of the Synoptic tradition, maintains the thesis that the Fourth Gospel constantly intervenes to correct Matthew and Luke where these, jointly or severally, diverge from the Marcan tradition. But the process of correction involves restatement, and this brings with it many compensations. "In almost all the numerous instances," says Dr. Abbott, "where John intervenes in the Synoptic tradition," he "seems to do this mostly with a view to elucidating Mark, where Luke omits or alters some Marcan tradition." An example is found, e.g., in the account of the miraculous draught of fishes given in St. Luke (v, 1 ff.), with the parallels in St. Mark (i, 16-20) and St. Matthew (iv, 18-22). The amplified and corrected version of this inci-

dent is to be seen, according to Dr. Abbott, in St. John xxi, 7-19, where it is placed *after* the Resurrection.

As Dr. Abbott remarks:

We lose something, it must be confessed, in arriving at the conclusion that Luke's carefully arranged and attractive Gospel—where it attempts to clarify or correct the obscurities and abruptnesses of Mark and [sometimes] to extract definiteness out of indefiniteness—cannot always be relied on as bringing us nearer to the words of Christ. But, even here, may we not learn more from Luke and John together—on the supposition that Luke is wrongly correcting Mark, and John rightly explaining Mark—than we should have learned from John alone without the erroneous Luke?

It seems to us clear that St. John does in his curiously "indirect" way often silently correct or restate certain things in the Synoptic narrative. He clearly has this in mind when he writes. But Dr. Abbott seems to press this occasionally too far, and sometimes finds allusions which are rather remote and unconvincing. None the less his discussion is full of valuable constructive work which, if it is carried through to completion—as we devoutly hope—will be of priceless worth.

The preface to the present volume contains a noble and profoundly moving vindication of the spiritual value of the Fourth Gospel. This Gospel sets before us, as nowhere else, "the Holy Spirit of Christ"

testifying to us of the ultimate triumph of the love of the Father, through the revelation of the Son, overcoming and converting to good all powers of evil.

This teaching, if true, is not a merely theoretical truth. Never was there an age when it was more practically needed—an age that has been so far led astray by the impostures of false philosophy and false science as to dream that man's permanent welfare can be brought about by an appeal to enlightened self-interest, through the readjustment of social and political arrangements, with the aid of the marvellous discoveries of modern science.

It may be added, to show the scale on which Dr. Abbott's work is planned, that the material discussed and examined in the 484 pages of the present volume covers only the first three chapters of St. Mark. The whole is admirably arranged and indexed.

A Public School in War Time. By S. P. B. MAIS. (3s. 6d. net. Murray.)

The War raises so many and such multifarious questions as to secondary higher education that we must not complain if, in this collection of miscellaneous articles, Mr. Mais touches only on a few of them, mostly those that have come under his immediate observation as a public-school master. We may, however, complain that his public school is a composite photograph. For the various scenes of which it consists he could doubtless quote chapter and verse, but he fails to give us any clear vision of his ideal school of the future, and he does not touch on any of the urgent reforms for which both those without and those within the pale are clamouring. Thus the Registration Council has laid down that the accredited teacher of the future shall be trained; but Mr. Mais apparently holds that the ideal teacher is born, not made, that without the innate power of discipline all other gifts and accomplishments will profit him nothing. So on the conflict of studies—the humanities and science—there is not a word. So, again, on entrance scholarships and preparatory schools at the bottom of the scale, and of matriculation examination and the Universities at the top.

But enough of fault-finding. We turn to the chapters on the O.T.C., Night Operations, and A Field Day. These are matters in which Mr. Mais has played a leading part, and his descriptions are vivid and lifelike. We rejoice to learn on such good authority that games have taken a back seat, and are no longer played as the main business and duty of school life. Lessons too, we are informed, have gained rather than lost by the change. We may, however, question whether, after a hard day's route march, or of coal-heaving, "the appeal of the majestic Greek poet, the English playwright, or the philosopher" will be infinitely greater and more instant; but of the good that will come from the mingling of all classes we have no doubt.

To make school chapels voluntary is a bold reform for which there is doubtless something to be urged, but it lies beyond our scope. We must, however, enter a mild protest against the virulent denunciation of Addison's "The spacious firmament" as the lowest depth of hymnology. Whatever we may think of it as a hymn, it is not "appalling versified nonsense." It sent no "shivering fit through our frame," and we remember no suppressed laughter when it was sung in our school chapel; even now we have the bad taste to prefer it to "the majestic martial hymns of G. K. Chesterton and Rudyard Kipling."

Married Women's Work. Being the Report of an Inquiry undertaken by the Women's Industrial Council. Edited by CLEMENTINA BLACK. (G. Bell.)

The inquiry of the Women's Industrial Council has more or less coincided in time with the rather similar undertaking of the Fabian Women's Group; the only difference being that the scope of the latter was to discover in what proportion of cases women workers in general support others than themselves.

Miss Black, in her introduction, divides married women of the poorer order into four classes, varying from those who, although the family income is inadequate, do not earn, to those who, although the family income is adequate for the supply of necessities, yet earn. The general conclusion of the investigators seems to be that the work of married women is mainly for the purpose of supplementing a more or less inadequate income. At Reading, for instance, the commonest answers were: "To supplement husband's wages," "because of husband's ill-health," "to support self and children since deserted by husband." The most important part of the inquiry has concerned the effect of industrial work on maternal functions. On the whole, Miss Black concludes that such work does not necessarily affect maternity adversely. It is always assumed that domestic work is compatible with the bearing and rearing of healthy children, whereas factory work is not. But often the domestic burden proves the heavier of the two. "It is possible that society is evolving in the direction of a family supported financially by the earnings of both parents, the children being cared for meanwhile, and the work of the house being performed by trained experts."

Meanwhile, what effect is the increasing employment of women having on men's wages? If it tends to lower them, then undoubtedly the work of some married women must force the rest into industry. But we must avoid the "lump of labour" fallacy in considering this question. If the employment of married women increases the national income, the result may even be the reverse. It will bring more leisure to some working-class wives. The investigations seem to have been efficiently and systematically carried out on the now familiar and inhumanly impersonal lines. For the hardness of men's hearts this is, of course, necessary.

"Four button-holers appear. No. 14 worked for a middle-woman, and was paid 5d. for a dozen shirts, described as containing 35 holes—a number which appears to be impossible, and should, perhaps, be 36." It is true that human touches sometimes occur. "Mrs. E 1 is thirty-five, and was married at seventeen. She works intermittently as a rag-picker, but at present is staying at home to nurse the baby (nine months), the said baby, however, being observed playing on a stone pavement, and already able to stand alone."

Nevertheless, if any modern Pharisee were to ask for the signs of the coming of the Kingdom of God, he might be answered not unsuitably: "When men and women are no more 'cases,' nor charwomen's earnings recorded in charts."

Politics and Crowd Morality. By ARTHUR CHRISTENSEN. (7s. 6d. net. Williams & Norgate.)

The Danish author of this book is greatly troubled at some of the phenomena of Parliamentary government. It all represents, in his view, the primitive instincts of the crowd. The characteristic of the crowd is that it does not think: it only shouts, and what it shouts is the result of suggestion. One of its symptoms is that it will go on crying the same thing

contentedly for a very long time. So do children; so, we are told in Scripture, does the crowd which no man can number in Heaven. But these two do it for a very good reason: the child because he has discovered something new and satisfying, and wishes both to perfect himself in it and have full joy of his attainment; the heavenly choir because it has found the one formula that expresses its ecstatic emotions as no other will. M. Christensen thinks that what the crowd cries is simply the greatest common measure of the thoughts of the individuals composing it. Its thought must therefore, he says, be primitive. But why should the thoughts that we all share be primitive thoughts? The thoughts that we all share in church, for instance, we are apt to regard not as primitive, but as the highest thoughts in us. After all, it is the proper function of the crowd to inspire and be inspired. It may express itself in catch phrases—"One man one vote," "Work for all," or what not? But that is its business—according to the theory, at least, of the British Constitution. It has to instruct its representatives as to the principles which it wishes to be carried out in legislation. It is his business to translate it into terms of statutes. M. Christensen gives scandalous descriptions of "scenes" in popular assembly, when the Chairman throws his bell at a leader of disorder, and gets his head punched in turn, and he finds the psychology of the crowd here too. In this he is, perhaps, more to be believed. And now we are told on the loose cover (what need for reviewers nowadays, when the publisher's boy gives us an epigrammatic evaluation of the book on its forefront?) that this work both explains the past and indicates possibilities for the future of Europe. And what are the possibilities? A Ruskinian aristocracy? An enlightened absolutism? A sympathetic bureaucracy? No; but a system of organic representation by trade groups! In other words, government by trade union delegates, or something rather resembling it. Could there be a greater bathos? M. Christensen's book is, in fact, falsified by the attempt to explain things by a single principle of a simple nature, a fault which he has borrowed from the Germans. Nevertheless there is a good deal of useful and interesting discussion of inter-State politics, and of the relation of public opinion to State morality. Public opinion, he thinks, may be of salutary effect in international dealings when it adopts the procedure of the morality of individuals, and thus throws off the taint of crowd-psychology.

Scientific Papers. By Sir G. H. DARWIN. Vol. V. (6s. net. Cambridge University Press.)

This concluding volume is occupied chiefly with the Cambridge lectures on Hill's Lunar Theory, in which Sir George Darwin considerably simplified the presentation by using comparatively elementary methods of analysis. The volume also includes a paper on librating planets, while the introductory pages contain biographical memoirs by Sir Francis Darwin and Prof. Brown.

Canadian Essays and Addresses. By W. PETERSON. (10s. 6d. net. Longmans.)

This is presented to the public as a memorial volume by the Principal and Vice-Chancellor of McGill University to mark the twentieth year since he became a citizen of Canada. To the older generation of Englishmen he is best known as a distinguished Latin scholar—the pupil, and for some time the assistant, of Prof. Sellar, and the editor of Quintilian's *Institutes*. The first address in the volume was before the Phi Beta Kappa in New York, in 1896, and the last, in 1914, at the Memorial Service held at the Royal Victoria College, built and founded by Lord Strathcona, the Chancellor of McGill, to whom, in conjunction with Sir William Macdonald, the volume is dedicated.

Such a volume stands in no need of an apology. The Principal of an American or Canadian University is perforce more or less of an orator, and each of these papers and addresses is a work of art, prepared with deliberate care and forethought. The War was still in the future, but an event that casts its shadow before, and the note that underlies and

inspires most of them is the unity of learning, and in particular the duty laid upon the Universities of the Empire to keep in touch with those of the mother country and consciously to pursue a common aim. Autonomy and individuality are not the only words to conjure with. Dr. Peterson is no hide-bound classic, and his admission of the claims of science in school and University education is no mere sop thrown to Cerberus. Yet he looks with something like horror on Harvard, which requires no Latin or Greek for matriculation, and he clings to the old superstition that Latin furnishes the only available key to universal grammar and is essential for a proper understanding of English literature. He does not see, or will not acknowledge, that for the average boy, who drops his pursuit of Latin at fourteen or earlier, the study is useless, or, at any rate, his time might have been more profitably employed. Nor does he acknowledge that acquaintance with Greek politics and Greek art can be obtained through translation, as is the case with a vast majority of cultured Frenchmen. This part of the subject, however, fills but a small place in the volume, whose chief interest is political.

I Serve. By GEORGE H. GREEN. (1s. 4d. Black.)

This little work strikes us as an odd mixture of two separate books. Issued with the approval of the Schools Personal Service Association, it is described as "a handbook of personal service." But it is quite as much a handbook of "rights." Six chapters out of the twelve deal with these "rights." The author starts with an excellent chapter on goodwill and kindness, and then gets round to "rights" by a peculiarly circuitous route. The one "right," he says, which no one disputes is the right to be of service to others; but if we are to serve others we must have food, clothing, shelter, leisure, and so forth; therefore every one has a right to these things. But this is using the word "right" in a figurative sense, and such use of language always results in muddled thinking. The author should rather have contrasted "rights" and "duties." Once on the false tack, Mr. Green finds himself plunged into politics and sociology. The discussion of what a human being ought to get in return for his service to society is very useful, but it has little to do with personal service, the basis of which is not justice, but loving-kindness. In doing service to others we have no feeling about their rights; a kindly woman who comforts a crying child in the street does not think that it can claim comforting as its due; and the author's view of children's "right to love and kindness" strikes us as having little meaning. Again, we may perform services to people who have everything that the world can give. "Helping people to secure their rights" is politics, not personal service, for it implies the action of the State. The author takes a high view of the ethical purpose of life, but to many of his readers some of his doctrines will come as bard sayings. "The true use of leisure is as a preparation for further service." No one will deny that this is true in the abstract, but it is one of those truths which for practical purposes we do well to keep very far back in our heads. "A Cabinet Minister who plays golf may fix his mind intently on political problems as he walks from tee to tee." If he does, so much the worse for him, his golf, and his problems. Play while you play and work while you work is the better doctrine. "Our liberty is given us in order that we may serve our fellow-men, and for no other purpose." What! may one never write a poem, paint a picture, or grow a flower simply to satisfy one's own instincts? May one never take a walk or read a book without a thought for one's fellow creatures? Not the entire suppression of self, but the restraint of it, is the more healthy and practical principle. All this is pitching the note too high for ordinary humanity. In the book as an ethical treatise, therefore, we find something to criticize; but as an attempt to explain social problems to adult people (it is not meant for children) much of it is excellent. The questions are treated lightly, but that is intentional and is wise, the author wishing to suggest ideas for consideration rather than supply ready-made opinions. A feature of the book is the lists of subjects for essays and questions for debate at the end of each chapter.

Community Civics. By JESSIE FIELD and SCOTT NEARING. (3s. Macmillan.)

In this small volume of 260 pages we have a very excellent compendium of the whole duty of man. The various responsibilities and interests of life in a successful, well organized community are worked out in great detail and in very simple language; and the fine enthusiasm which the authors feel for their great subject is likely to be communicated to the young readers for whom it is evidently intended. And, while written for growing boys and girls, it will be a

very helpful textbook for teachers; for, though it is specially applied to the more primitive life of the West, most of its teaching has equal force, and is perhaps more needed, in a country in which people's obligations to each other tend to become relegated to the State. The chapters on the work children can do, and have done, in America towards beautifying and enlarging the scope of their school, and the advantage to the district of their studies in soils and seed-testing, are a striking proof of the sincerity and pleasure with which children will throw themselves into work that has a more than schoolroom value.

The German War of 1914. Illustrated by Documents of European History, 1815-1915. Edited by J. R. H. O'REGAN, M.A., History Specialists' Master at Marlborough College. (1s. 6d. Oxford University Press.)

Mr. O'Regan's "source-book" is a carefully planned compilation of sixty documents or extracts from documents comprising treaties, proclamations, diplomatic notes, and a few speeches, given in English. It begins with the Holy Alliance, and goes down to the summer of last year. Half the selections are immediately concerned with the present War, and it has as an appendix a facsimile of two pages from a German *Knapsack Dictionary* (*Tornisterwörterbuch*), apparently compiled to enable an officer to take his part in the subjugation of England after a successful invasion.

Marching Away. A Book of Consolation for War Sorrow.

By J. H. YOXALL. (6d. net. Horace Marshall.)

The reprint of five articles contributed by Sir James Yoxall to the *Daily News*. They are pleasantly written, though the message, like that of *In Memoriam*, is mainly "behind the veil." Few, however, will join those correspondents who upbraided the author for the expression of eternal hope with which he concludes. Had he revised the articles, he would doubtless have discovered the meaning of the "second paraphrase"—not contrasted Edith Cavell with the heroine of a long single life, and refrained from a sneer at current American literature.

A Short History of Belgium. By VAN DER ESSEN. (4s. net, University of Chicago Press and Cambridge University Press.)

Of the nations of Europe, the Belgians have been the last, save the Italians, to secure an independent national existence. In the Middle Ages they formed a collection of separate cities and provinces. Burgundian, followed by imperial rule, welded these communities into something like a State. Since then the Belgians have been successively under the rule of Spain, Austria, and France, and linked in a loveless union with Holland. But in spite of this Belgium has always had an individuality, and in his sketch of her history M. van der Essen, who is Professor of History in the University of Louvain, brings this out very well. His best chapters are those on the social condition of the country at various periods. He has an excellent description of the medieval city communities, and a good account of civilization, art, and literature—"the splendid achievement of Belgian culture," he calls it—during the Burgundian period. The account of the revolt from Spain is tame, and the author's sympathies are clearly not wholly with the rebels; it is a Belgian Catholic, not a Dutch Protestant, who is writing. The "Sea-beggars" are not mentioned, but certainly they are less important for Belgian than for Dutch history. We could wish for more information about politics in the nineteenth century: we are told nothing of the questions at issue between Catholics and Liberals. We notice a slip on page 12: Clovis did not make Paris his capital. We fear M. van der Essen is too complimentary to Elizabeth when he says that she "resolutely ranged herself on the side of international Protestantism, assisting and often directing its attacks." The book is written in excellent English, and we have noticed only a few traces of a foreign hand. It may be recommended to those who are in search of a reliable sketch of Belgian history.

How to teach American History. By JOHN W. WAYLAND. (5s. Macmillan.)

It is, perhaps, a pity that the title of this book seems to limit its scope, for most, if not all, of its admirable suggestions and examples could be applied by teachers of history in all countries. Prof. Wayland offers no dogmatic instruction as to how knowledge should be presented to a class; he recognizes very frankly that the methods adopted must vary according to the character of the teacher and the capacities of the class, and that no definite rules can be laid down. The born teacher will always evolve new methods for himself; but the born teacher of history—gifted with knowledge, memory, judgment, and personality—cannot be found in sufficient numbers to satisfy the needs of our students; and a book like this, containing so much practical advice, and such kindly, carefully chosen warnings will be a real help to many earnest teachers who have been conscious of failure. There are very few of the problems that confront the average teacher on which Prof. Wayland has

not something illuminating to say, while his hints as to the use of pictures and handwork, setting the children to hunt out local historic scenes and relics, learn patriotic songs, and act great events from history, are not the less useful because essays in that direction have already been made in many schools. The line followed in this book is the one recommended by it—to make those to whom it is applied think, not simply accept the thoughts of others. There are many points which deserve fuller discussion than can be given to them in the space of a short review. The author is strongly against overloading the student's mind with a long list of dates, and gives in one chapter some ingenious aids to memory by which that labour can be lightened. The few dates, thoroughly mastered, and with much pictorial assistance, will act as the corner-posts of a house; no weight of detail that is added afterwards can force the building into crooked and uncertain lines. If the first years of school life were not given to periods or countries studied in detail, but to stamping in a few "milestones" of the world's history, elaboration, when it came, would fit into its place, and the young mind would not be perplexed by the constant change of focus as the field enlarges. The advice as to careful questioning and the importance of well-expressed, simple examination papers is worth study, and the comments, favourable and otherwise, which have been collected from students about their teachers are also useful for purposes of self-examination. One novel suggestion is the *pre-view*, to direct attention to points to be developed in the lesson, in preference to the *review*, which comes when interest is waning. Prof. Wayland strongly urges the use of notebooks, but advises the writing of a summary after the lecture rather than the distraction of taking notes during it. Could not time-tables be arranged with a view to that? One of the greatest obstacles to concentration that the child's mind has to face is the hurrying from one class to another on a totally different subject without a moment's interval for reflection on the material that has just been placed before it. This book has so much that will be really helpful that teachers in England must not let themselves be deterred from studying it by a somewhat American standpoint in the earlier chapters.

(1) *Converging Paths*. By Prof. CAMPAGNAC. (2s. 6d. net. Cambridge University Press.) (2) *The Ultimate Belief*. By A. CLUTTON-BROCK. (2s. 6d. net. Constable.)

(1) The War is making people think about fundamental ideals perhaps more than ever before, and it is natural that educationists should revise their textbooks or see to the revision by others, for theirs is the task of guiding the coming generation. We have before us two volumes of modest size: one by a professor of education, one for teachers by a layman. The juxtaposition in Prof. Campagnac's book of *Religious Instruction* and *Commercial Education* is significant, and it will not surprise the reader to find a searching and just demand of the employer—"What is it, after all, you want?"—and a bold assertion that the schoolmaster's work is to produce "live intelligence," not "living machines." The book is interesting, arresting, and unlike the ordinary run of educational books. Now and again we find touches of pessimism, if not of cynicism, as at the close of the chapter on Religious Instruction, and in parts of Standards in Taste and Morals. Sometimes, too, we cannot help feeling that Prof. Campagnac allows himself to be carried away by the sound of his own words. It will not help any one towards reform, for instance, to be told they are "rotund in mind," and therefore "they very naturally argue in a circle." Should they be parabolic, and so reach the infinite? and if so, how should they attain this state?

(2) Mr. Clutton-Brock's book is of a very different type, simpler in language, and more direct: a very clear and honest confession of faith. Driven by a condemnation of modern German values, the author attempts to answer the question, "What should we value above all things?" and asserts, "They (the Germans) have made a State that is a danger to the world, because the aim of that State is wrong; but our State is aimless." His answer, in brief, is that the spirit has three activities and desires—the moral, intellectual, and æsthetic—each to be pursued for its own sake. No education, he says, is satisfactory which cramps any one of these activities, or makes any one subserve the other, though each naturally affects the other. The pursuit of goodness, truth, and beauty is the spirit's heritage. Perhaps the most original contribution in the book is Mr. Brock's insistence on the danger of ignoring and repressing the æsthetic activity in a boy's education, and also of making goodness a matter of reward and punishment, not an end in itself. The book should be read: its sincerity and honesty deserve recognition and the reward of serious consideration.

The Book of Joshua. Edited, with Introduction and Notes, by G. E. J. MILNER. (1s. net. Oxford University Press.)

For those who desire a text with a minimum of notes this edition may be commended. The text of the R.V. is printed continuously,

and the notes are placed at the end. The introduction of two pages might well be longer.

The Book of Judges. Edited by H. C. O. LANCHESTER. (1s. 6d. net. Cambridge University Press.)

This volume forms one of the excellent Cambridge series of short commentaries on the R.V. There is a good introduction of nineteen pages, which includes an analysis, and sections on the chronology, sources, and history of the Book, the religious conditions of the time, &c. A useful body of notes is printed below the text. The broad results of criticism are assumed throughout. The book will be welcomed by teachers for class purposes.

Joel and Amos. Edited by S. R. DRIVER, D.D. Adapted to the text of the R.V., with a few supplementary Notes, by H. C. O. LANCHESTER, M.A. (2s. 6d. net. Cambridge Bible for Schools.)

This edition of the late Prof. Driver's well known commentary will extend its usefulness. In its present form it is practically the same work as that issued in the original edition. Mr. Lanchester's notes are added where it is necessary to bring the original statements up to date, and occasionally expand and further elucidate what Driver wrote; but the present editor rightly has rigidly limited himself in these matters. It is needless to add that the commentary is a storehouse of solid learning compactly arranged, and that the student who works through it diligently will be richly rewarded.

Elementary Experimental Statics. By IVOR HART, B.Sc., F.R.A.S. (2s. 6d. Dent.)

A very useful addition to the valuable library of educational textbooks to which it belongs. The series of experiments which the author discusses lucidly and systematically, and which are delightfully illustrated by clear diagrams, will go far towards securing for many a student that mental discipline which it is the writer's aim to ensure. There are various passages in the text for which we should prefer other wording; it will be for the laboratory demonstrator to suggest desirable modifications. A framework arranged by Mr. Hart and Mr. E. G. Hardingham has been specially designed for the purpose of simplifying the setting up of the apparatus needed for these and probably many other experiments.

Ju-jitsu: Self-defence. By W. BRUCE SUTHERLAND. (1s. net. Nelson.)

The noble art of self-defence as practised to-day is here illustrated by fifty-six photographs of holds, locks, throws, counters, and grips, showing how armed force, Bia and Cratos, may be baffled and vanquished by Prometheus, art, and intelligence. The author, we are convinced, would be the last to profess that anyone could learn the art merely by a study of these captivating pictures, but it will induce special constables and others who have passed the fatal age of forty to attend the Physical School of Culture at Edinburgh, and let us hope that the War Council will open similar institutions for recruits, Boy Scouts, and the noble army of women who wait and serve.

General Phonetics. By G. NOËL-ARMFIELD. (Cambridge: Heffer.)

Mr. Noël-Armfield's book is intended for missionaries and students of language, and we have no doubt that it will prove of practical use. The author begins with the study of the organs of speech and speech-sounds, and passes on to the discussion of the phonetics of the English language. The student will therefore learn the principles of the science by the investigation of material with which he is already familiar. In some of the late chapters sounds which do not exist in English are considered, examples being drawn from Welsh, French, German, Arabic, Hebrew, and many other tongues. Clicks are not forgotten, and the student will learn the true pronunciation of "Cetewayo." The treatment of the subject is thorough—occasionally, indeed, we are inclined to think, too thorough for an elementary work; some of the explanations of minute differences between dialects might, perhaps, have been omitted. Mr. Noël-Armfield is an encouraging teacher, and will not allow that any sound is impossible for an European. Many missionary students will no doubt be relieved to hear that he does not believe in the existence of African sounds which cannot be made unless you knock out two front teeth. A number of exercises, some of them of an exacting character, will be found at the end of the book, and also some useful hints on the transcription of languages hitherto unwritten. The alphabet of the International Phonetic Association is used throughout.

Sounds of the Mother Tongue. By L. H. ALTHAUS. Revised Edition. (2s. University of London Press.)

Miss Althaus is a firm believer in phonetics for school children; she would have half-an-hour a day given to phonetic work for a whole year when children are aged nine or ten. She believes that the ultimate result would be a saving of time, because her ex-

perience is that children who have been trained in phonetics acquire the pronunciation of foreign languages very rapidly. Moreover, she believes the drill to be of value in many other ways. Any head masters or mistresses who think the experiment worth trying will find their account in Miss Althaus's book. The work is intended for the teacher, and gives detailed instructions for the conduct of about forty "lessons," the mastery of each lesson being assumed to take a week. The method is rigid, the children are expected to do all the work, and to discover for themselves what happens when sounds are made, and what is the difference between pure vowels and our diphthongal vowels, the whole aim of the course being to give the child a complete mastery of his speech-organs and enable him to produce sounds unlike those of his mother-tongue. Thus he will come to the study of continental languages fully prepared to utter continental speech-sounds. The book, as we said, is one for the teacher, but the pupil's part, the Sound-drill and Exercises, can be had separately, price 6d.

A Concise Anglo-Saxon Dictionary. By JOHN R. CLARK HALL, M.A., Ph.D. Second edition, revised and enlarged. (Cambridge University Press.)

The first edition of this dictionary was published in 1894, and, though a work of considerable value, it was vitiated by the inclusion of much spurious material. Great progress has been made since then in old English lexicography, both in accumulating material and ascertaining the meaning of words, and this progress is strikingly reflected in the second edition of Dr. Hall's dictionary. The book is not only larger and different in shape, but it is superior in every sense to its first edition. It has between six and seven thousand more words than Sweet's *Student's Dictionary of Anglo-Saxon*. In addition to the various meanings and spellings of the words, references are also given in the majority of cases to the works in which the words are found; in many instances the page and line are given, but generally the page only. A new feature of this edition, and one that is certain to be found helpful and interesting, is the reference to the *New English Dictionary* in the case of every word which has lived on to Middle or Modern English. The derivation of words taken from Latin is generally given—e.g. *mynt* (*L. moneta*); frequently also related words in other languages are added—e.g. *lichama* (*Ger. leichnam*). This nibbling at etymology has little to recommend it, especially since reference is made to the *New English Dictionary*, and, in our opinion, the space could have been better given to fuller references. We have noticed the following omissions: *gelong* (Orosius), *hærn* ("brain," A. S. Chron.), *wiellan* ("charms"). "Boastful" can hardly be the right meaning of *gielphleden* in Beo. 868; "proud" suits the context better. Alternative meanings, such as "wave-tosser," "wave traverser," should have been given for *wægþora* (Beo. 1440). Only "smoke" is given for *swaþul* (Beo. 782). Chambers, in his important note on the word, has shown that the right meaning is "flame." *Næðing* means "risk" in Orosius as well as "boldness, daring"; *miere* should be *miere*. *Geon* is called an adverb. In the only recorded instance of its use in Old English, it is an adjective, like the modern *yon*: *tō geonre hyrg* (Gregory's Cura Past., ed. Sweet, page 443, line 25). Like all the publications of the Cambridge Press, the book is well and carefully printed. *Ofslitan*, however, ought to be *ofslitan*, and the reference for *itertinum* should be Beo. 1459.

The Rambler Travel Books. Edited by LEWIS MARSH. (9d. each. Blackie.)

To hear of lands from travellers who have really been there is a matter of delight to children. These books used for incidental reading in connexion with a geography course will make the lessons vivid and real. The beautiful coloured pictures and photographs add much to the charm of the series.

Gulliver's Travels. Edited by A. H. GOUGH. (2s. 6d. Clarendon Press.)

We wonder how many people want to know to what contemporary freak of folly or perversity each bit of satire in *Gulliver* refers; but, if any such there be, here is their chance. Mr. Gough has worked up the references most thoroughly, and his notes contain many bits of odd information, over which the curious will linger with pleasure. It is a sound edition. No absolutely authoritative text of *Gulliver* exists or can exist, for his first publisher bowdlerized the manuscript—judiciously, no doubt, from his point of view, the pillory still standing ominous in Cheap-side, but flagitiously from ours. Fortunately, the traveller left behind an interleaved copy of that first edition, which now lies in the South Kensington Museum, and which Mr. Gough has used, thereby restoring the work to its original completeness, as near as may be. Further, he gives us reproductions of the original title-pages and maps, and Gulliver's letter to his cousin Sympson. There is a good introduction, but the editor discusses the Houyh-

nhm satire with needless laboriousness. Surely, when we have said that it was the product of a diseased mind, we have said everything. And, if it excited little protest, surely that was not because the generation was specially accursed, but because no one took the libel seriously. The *Travels* are not "angry denunciation"; they are half a mocking laugh and half a vicious smile. The wrath of the righteous man is not there; it is in the works on Ireland only that Swift shows the glow of genuine passion.

Selections from the Writings of R. L. Stevenson. Collected and Edited by S. G. DUNN. (1s. 6d. Longmans.)

It is good to see such a book making its appearance among class-books of English literature. Mr. Dunn has written an admirable introduction, and the selections are just such as to show Stevenson's many-sidedness. We have only one point of disagreement. *Markheim* may be "a beautiful allegory," but it is also a terrible one and surely not suited to immature minds.

A Child's Garden of Verses. By ROBERT LOUIS STEVENSON. New Edition for use in Schools, with an Introduction by GUY KENDALL. (1s. Longmans.)

This is a most welcome addition to cheap school classics. Mr. Kendall has written a brief biography as introduction. It is interesting and amusing, but we miss some of the details that would fire a child's imagination. There is no mention in it of "Cummie," "My second mother, my first wife"; no account of the "emigrant" voyage, nor of "The Road of the Loving Heart." It is such things as these which would make children anxious to hear about Stevenson when he was a child, and thus take them into the *Child's Garden*.

Black's Travel Pictures. Selected and edited by ROBERT J. FINCH, F.R.G.S. (10d. per set. Black.)

This series, which we have already noted in a former issue, keeps up its high standard of production. The coloured pictures are very artistic as well as instructive, and the photographs clear and well chosen. The latest additions to the series are Africa, South America, and Australasia. With such aids in geography teaching there need no longer be any making of bricks without straw on the children's part.

Black's Picture Cards. (2d. each set of six. Black.)

Coloured pictures which have appeared in Messrs. Black's Series of "Peeps at Many Lands," are here outlined with directions for colouring. This should prove both amusing and instructive for children, who delight, as a rule, in this occupation.

"Longmans' Wall Pictures."—**Wild Animals of the Empire.** (2s. 6d. each net; complete set of twelve in a portfolio, £1. 15s.)

These are quite the best set of coloured pictures of wild animals we have seen. They are large enough to show the animals very clearly, and yet also to give a good idea of the natural surroundings. Drawing, colouring, and composition are so excellent that the pictures are far more than merely instructive from the point of view of natural history—they are real works of art. The original pictures are by Mr. Edgar H. Fisher, and it is interesting to note that the series is produced entirely in England. The price is wonderfully moderate considering the type of picture.

Milton's Paradise Lost. Books I and II. Edited by C. F. GREGORY. (1s. 6d. G. Bell.)

There is nothing original or noteworthy in this new edition. On Milton's poetry, passages from Johnson's, Coleridge's, Mark Pattison's, and Sir Walter Raleigh's criticisms are quoted, and the notes give only absolutely necessary explanations, discussing no difficulties, and rarely referring to the origin of phrases. The series is intended for examination purposes, but we doubt whether pupils who need no more help than is here afforded them have any business to be taking up *Paradise Lost*.

A Heuristic English Grammar. By W. J. ADDIS, M.A., Examiner in English to College of Preceptors, and Head Master of Holborn Estate Grammar School. (1s. 4d. Constable.)

This is a disappointing little book; its intention (as set forth in the Preface) is excellent, and it contains plenty of good material. Those who have realized the difficulty of teaching English grammar would welcome a living and natural treatment of the subject. But, though Mr. Addis raises many interesting questions, it seems doubtful how far his book could be advantageously used except by himself, or by some one provided by him with a "Key for the use of Teachers." It is not obvious for what age of pupil or what school class the book is intended; it seems at once so elementary and so advanced. The simple foundations of grammar—e.g. the distinction between subject and predicate, noun and verb—should surely be taken with quite young classes, but the extremely technical terminology and constant insistence on definition—thus (page 16), the

pupil who has just mastered the distinction between subject and predicate is asked to "define a thought"—belong to a quite late stage of mental development. We could wish that Mr. Addis had either omitted punctuation altogether or treated it more adequately; the examples on page 64 tend to be mere distortions of language; and should not the quotation from Scott read: "Charge, Chester, charge," not *Marmion*?

All About Aircraft. By RALPH SIMMONDS. (Cassell.)

This is a new edition, revised and enlarged, to include new aircraft developments. In a book of this kind the young do not demand great literary style, but the clear presentation of any amount of information. We have tried *All About Aircraft* on a philosopher of seven, who was properly absorbed and interested. The print is good and not too small. There are many photographs, and the hints about making paper gliders were much appreciated and put into practice at once by the same youthful reader.

The Boy Electrician. By ALFRED P. MORGAN. (5s. net. Duckworth.)

This is an American production, written for American students by a well known electrician. It differs from the ordinary English manual of electricity by launching the pupil almost from the start in *medias res*. The frontispiece shows a boy (or is it a girl?) constructing a wireless apparatus made up of the materials described in Chapter XIV, and the whole volume is a treatise on learning by doing. The pupil is shown a series of experiments, beginning with those of Franklin, and told to go and do likewise. Just sufficient explanation is given to guide him in the way he should go and guard him from natural blunders, but otherwise he is left to follow his own devices. The supreme merit of the book consists in the 323 figures specially prepared by the author and incorporated in the text. The fault is that it is wholly disconnected with his work in school, and presupposes infinite leisure and patience. No attempt has been made to fit it to the conditions of English schools and English life. The average English boy will soon exhaust the simple experiments of the first chapters, and be left hopelessly floundering out of his depth. He will read of Thomas Davenport, of Edison and Tesla, but of Gilbert, of Faraday, of Oliver Lodge, of Ramsay and Raleigh, of Marconi, scarce a word. He will try the experiment of lighting a gas burner after walking across a carpet in winter, and signally fail. It is a pity that so good a work in its plan has not been adapted for an English public.

Pictures of Human Life. Series I, Historical; Series II, Geographical. (1s. each, 6s. net the set. G. Philip.)

These wall pictures by Mr. Harry W. Whanslaw are very clear and good in composition. It is difficult to get satisfactory colouring in such cheap reproductions, and in some of the pictures the colouring is distinctly crude. This is particularly noticeable in the History pictures, which are otherwise good. The Congo Forest and the Eskimos are the most successfully coloured, and are very effective. The Japanese woman has a curiously English look.

A Syllabus in War Geography and History. By ALBERT A. COCK. (6d. net. G. Philip.)

This simple syllabus by the Lecturer in Education of King's College, London, is designed for "the senior classes in elementary and secondary schools." It is excellently planned, and the thirty-two pages provide ample work for a year, but there are few elementary schools, even with four lessons a week, that would venture to attempt the amount of ancient history that it includes, and we should hope that secondary schools, even with more limited hours, would attempt a wider scope and include the campaigns in Mesopotamia and in Germany's African colonies. There is reference to the best recent War Atlases, but we wish that in the next edition the author would add a brief bibliography.

FRENCH SCHOOL BOOKS.

- (1) *Longmans' Modern French Course.* Part II. By T. H. BERTENSHAW. Illustrated. (1s. 6d.; Teachers' Edition, 2s.)
- (2) *Manuel de Lecture Expliquée: XIXe Siècle.* By S. A. RICHARDS. M.A. (2s. 6d. Cambridge University Press.)
- (3) *La Jeunesse de Cyrano de Bergerac.* Par H. DE GORSSE et J. JACQUIN. Edited by T. B. RUDMOSE-BROWN, M.A., K. M. LINTON, B.A., and H. A. JACKSON, M.A. (3s. Hachette.)
- (4) *Histoire d'un Conscrit de 1813.* By ERCKMANN-CHATRIAN. Edited by OTTO SIEPMANN. Advanced.
- (5) *Mon Oncle et mon Curé.* By JEAN DE LA BRÈTE. Edited by E. C. GOLDBERG, M.A. Advanced. (2s. 6d.)
- (6) *La Tour des Maures.* By ERNEST DAUDET. Edited by A. H. WALL, M.A. Elementary. (2s. Macmillan — "Siepmann's French Series.")
- (7) *Voyage au Centre de la Terre,* edited by E. R. SHEARER, M.A.;
- (8) *De la Terre à la Lune,* edited by R. T. CURRALL, M.A.;
- (9) *Cinq Semaines en Ballon,* edited by J. E. MANSION, B. ès L. All by JULES VERNE. (1s. 6d. each — "Harrap's Modern Language Series.")

- (10) *Michel Perrin.* By MME DE BAWR. Edited by J. L. THÉODORE-GETZ, B. ès L. (8d. — "Blackie's Longer French Texts.")
- (11) *The Teaching of Modern Foreign Languages by the Organized Method;* (12) *Classroom Phonetics.* Both by HARDRESS O'GRADY. (1s. net — "Constable's Handbooks in the Art of Teaching.")
- (13) *Exercices in French Composition.* By MARY STONE BRUCE, A.M. (1s. 6d. Ginn.)
- (14) *Nouvelles Soirées chez les Pascal.* By KIRKMAN and LACOURT. With Coloured Illustrations. (1s. 4d. Black.)
- (15) *La Maison aux Panonceaux.* By Lady FRAZER. Edited by A. WILSON-GREEN, M.A. ("Cambridge Modern French Series." Junior Group.)
- (16) *Contes Bleus.* By LABOULAYE. Edited by C. W. MERRYWEATHER and H. NICHOLSON. (1s. 6d. — "Longmans' French Texts.")
- (17) *Models and Exercises in Commercial French.* By E. T. GRIFFITHS, M.A. (2s. 6d. net. Pitman.)
- (18) *Le Français par l'Exemple et les Textes.* Livre III. By C. L. ALBERT BONNE. (1s. 6d. net. Rivingtons.)

(1) A teacher so experienced as Mr. Bertenshaw knows instinctively how, in writing a textbook, what to omit, what to insist on, and how to insist on it. Further, he avoids the mistake, so frequently made by eager, young practitioners, of overrating the capacity of the average learner. Mr. Bertenshaw's reading material and the exercises based on it—these are both oral and written, of the Direct Method, and of the retranslation type—are alike of sufficient difficulty to make a class use its wits without being exorbitantly puzzled. The illustrations of this volume deserve special mention. Miss Payne's drawings reach a high standard of artistic merit and of humour, while the photographs illustrating the sections which tell of "the pleasant land of France" are uncommonly attractive.

(2) It is a pleasure to handle this dainty volume of Mr. Richards; a greater pleasure to turn the pages and note his logical method, his skill in developing his authors' thoughts, in exposing their style, in assigning to them their place in the history of French literature. There is a short literary life of each writer, followed by one or more passages chosen from his works. Then come detailed notes and questions upon the more uncommon words and phrases, an examination and explanation of the fragment from the literary point of view, with a few subjects for short essays—all, of course, in French. We English have much to learn from French teachers of literature, Chamard and Michaut, Gazier and Reynier, above all, Lanson and Faguet. It is delightful to find an Englishman following a system so admirably adapted to display to advanced pupils the jewels of the treasure-house. If we may venture upon a small piece of criticism, it is that Mr. Richards has confined himself almost exclusively to writers of only the first half of the nineteenth century, and that De Vigny, De Musset, and Gautier are represented by verse passages alone. Room should have been found for an example of the dramatic work of each of the two Alfreds and of the prose (say the *Bataille d'Hernani*) of him of the flamboyant waistcoat.

(3) A tale of fascinating interest for advanced students, one which, although itself not always true to historical fact, will serve to correct Rostand's melodramatic portrait of Cyrano. The notes, topographical, philological, and historical, are frequently of extreme interest, but err on the side of prolixity. On page 271, for example, there is a note of over forty lines on the *pâtisserie* of the seventeenth century. The volume contains some excellent prose passages for retranslation.

(4), (5), (6). These three volumes are excellent examples of the very sensible and effective series of modern language texts edited by Messrs. Pellissier and Siepmann. The plan of that series is well known: a thorough introduction, an interesting story, full grammatical and historical notes; the whole followed by words and—most important—phrases for *viva-voce* drill, *questionnaire*, and lastly idiomatic sentences and prose passages for retranslation into French. It is difficult to conceive a method better adapted for fixing in the mind what has been learnt in the reading lesson. The phrase on page 9 of No. 6, "Jacques après avoir jeté un rapide coup d'œil autour de soi," seems to need a note.

(7), (8), (9). A schoolboy who brands as dull a French hour in which he has read any one of these abridgments of Jules Verne's thrilling romances must, indeed, be hard to please. The edition is of the old-fashioned kind: introduction, notes, vocabulary, with the addition in No. 9 of six pages of "Notices sur les noms propres." It is, perhaps, a little inconsistent to flank a series of textual notes in English by a block of similar notices in French. Another point calls for criticism. It is expressly stated that the vocabularies are incomplete, especially in regard to "many words having English equivalents of similar form in frequent use." But in the vocabulary of No. 7, while words such as *âge*, *agonie* are included, the following—to take chance examples—are omitted: *grimoire*, *fûts*, *mamelonnées*. In elucidation of *un homme . . . vigoureusement décollé* the lexicon offers nothing but: "*découpler*, to uncouple; let loose (on)." Again, in what way is a child wiser for

knowing that *orographique* means "orographical," and *trappeien* "trappean"? This is unintelligent editing.

The editing of (10), on the contrary, is entirely praiseworthy. Particularly noticeable is the editor's habit of paraphrasing in French all difficult words and sentences before proceeding to an English rendering. The *questionnaire*, the Direct Method sentences and grammar exercises, the passages for retranslation, and the half-dozen *thèmes libres* are all good.

(11), (12). All that Mr. O'Grady has to say is suggestive. His style, though verbose, is lucid; his attitude is inquiring and independent. He refuses to accept ready-made opinions without examination. One has distressing memories from the dim past of hearing complacent theorists assert that the French classroom should be, like the French Embassy, a piece of French soil, where no word of English may be heard. It is refreshing to find Mr. O'Grady averring boldly that "under strict guidance we should use the word-building or word-forming exercises for teaching new vocabulary. But when we find that there is going to be loss of valuable time by trying to arrive at the meaning of a word in the foreign language, it is far better to give the English equivalent and have done with it." We disagree with many of Mr. O'Grady's conclusions; with this one, for example, that in a four-periods-a-week four-year course "the whole of the first year should be given to the detailed study of foreign sounds and the learning of the most necessary vocabulary." Indeed, all through, we feel that he does not in his syllabus study economy of time. Nevertheless, both these volumes are, because of their suggestiveness, well worth study by all language-teachers.

(13) *Exercises in French Composition* on the sound and sensible retranslation system. Three short passages of French prose dealing with the war of '70 are followed by a number of exercises in which the words and phrases found in the reading lesson are used again and again as material for English-French translation. The only suggestion one would offer to Miss Bruce is that she might with advantage have cut down the number of exercises and enlarged the space allotted to the stories. Two dozen pages of exercises to six pages of original reading matter is too high a proportion.

(14) *Nouvelles Soirées chez les Pascal* "is intended to be, not a lesson book, but a story book." It is for class reading in the second year, and consists of a series of fairy tales told—on the Boccaccio plan—by members of the Pascal family. Story books should be attractive to the eye. This volume is particularly so. It is charmingly illustrated in colour, the pages are almost opaque, and the print is big and clear. The sentences are short and of simple construction. Each *soirée* is followed by a few short notes in French, and the *questionnaire* is planned "to impress upon the memory some of the commoner words; but it should not be insisted upon if its use tends to dull the interest of the class."

It is Lady Frazer's aim in (15) to "faire connaître un vieux coin de France, avec ses habitudes provinciales enracinées et désuètes." Her story, of an old-world flavour, is well suited to junior classes of girls. It is scarcely of a kind to interest boys. Mr. Wilson-Green has written a number of exercises, methodically grouped, designed to get the scholars to retell the story in its main lines, to familiarize themselves with words fresh learnt and construct new ones, and to keep their grammar up to the mark. It is characteristic of the latest development of modern language teaching that the book, a Direct Method production, is equipped with a French-English vocabulary.

The intention of the editors of (16) is to provide a reading-book furnished with reproduction exercises (sentences and continuous prose) for teaching French syntax systematically, and is well adapted for attaining this goal. It contains notes and vocabulary, but no *questionnaire*.

(17) An attempt to bring the teaching of commercial French into line with the recognized methods of language teaching by a judicious admixture of the literary element. The extracts are well chosen and of very varied scope—commercial geography, commerce and industry, commercial usage, general economic questions, commercial law all receiving attention in their turn. Appended to each extract are passages for retranslation and subjects for free composition. We are a little doubtful of the value of the extra passages for translation into French contained in the appendix, for the reason that they are not based on actual French originals, and contain many words for which the pupil is not furnished with French equivalents.

The plan of each lesson in (18) is as follows. One or more short passages of French for reading and translation, a complete alphabetical vocabulary, a list of *dérivés et composés*, grammar, *questionnaire*, Direct Method exercises, and (in some lessons) exercises of the old-fashioned sort. There are twenty-five of these lessons. There follow some seventy more pages of grammar, thirty pages of phonetics, twenty pages of vocabulary, and four songs. Each lesson seems, in our opinion, a trifle too long, but the book is a painstaking compilation.

A SELECTION FROM METHUEN'S LIST.

A SENIOR EXPERIMENTAL CHEMISTRY. By A. E. Dunstan, D.Sc., and F. B. Thole, D.Sc. With many Diagrams. Crown 8vo, 5s.

SOME SECRETS OF NATURE. Short Studies in Field and Wood. With an Introduction by W. J. P. Burton. Illustrated with Coloured Plates and Photographs from Nature. Second Edition. Cr. 8vo, 1s. 6d.

THE ROMANCE OF NATURE. Studies of the Earth and its Life. By W. J. P. Burton. Illustrated with Coloured Plates and Photographs from Nature. Second Edition. Crown 8vo, 2s.

ELEMENTARY LESSONS ON PLANT LIFE. By D. G. Scott, M.Sc. With many Diagrams and Illustrations. Crown 8vo, 2s. 6d.

JUNIOR SCRIPTURE EXAMINATION PAPERS. Old Testament. By Rev. S. A. P. Kermode and Canon W. Williamson. Fcap. 8vo, 1s. [Junior Examination Series.]

JUNIOR SCRIPTURE EXAMINATION PAPERS. New Testament. By A. G. Walpole-Sayer and Canon W. Williamson. Fcap. 8vo, 1s. [Junior Examination Series.]

STORIES FROM THE OLD TESTAMENT. By E. M. Wilmot-Buxton, F.R.Hist.S. Third Edit. Cr. 8vo, 1s. 6d. [Beginner's Books.]

STORIES FROM THE NEW TESTAMENT. By E. M. Wilmot-Buxton, F.R.Hist.S. Crown 8vo, 1s. 6d. [Beginner's Books.]

JUNIOR ENGLISH. By F. J. Rahtz, M.A., B.Sc. Twelfth Edition. Crown 8vo, 1s. 6d.

HIGHER ENGLISH. By F. J. Rahtz, M.A., B.Sc. Tenth Edition. Crown 8vo, 3s. 6d.

ENGLISH COMPOSITION. By F. J. Rahtz, M.A., B.Sc. Crown 8vo, 1s. 6d.

ENGLISH LITERATURE. By F. J. Rahtz, M.A., B.Sc. Crown 8vo, 2s. 6d.

SELECTIONS FROM ENGLISH LITERATURE. Vol. I (1350–1700). By F. J. Rahtz, M.A., B.Sc. Crown 8vo, 2s.

SELECTIONS FROM ENGLISH LITERATURE. Vol. II (1700–1900). By H. N. Asman, M.A., B.D. Crown 8vo, 2s.

INTUITIVE FRENCH. A Year's Course for Beginners. By M. Verdon. Crown 8vo, 2s.

A JUNIOR FRENCH GRAMMAR. By L. A. Sornet and M. J. Acostas. Fourth Edition. Crown 8vo, 2s. [Junior School Books.]

NOUVELLE GRAMMAIRE FRANÇAISE, à l'usage des écoles anglaises. By J. G. Anderson, B.A., Examiner to London University. Crown 8vo, 2s.

EXERCICES DE GRAMMAIRE FRANÇAISE. By J. G. Anderson, B.A. Crown 8vo, 1s. 6d.

A JUNIOR FRENCH PROSE. By R. R. N. Baron, M.A. Seventh Edition. Crown 8vo, 2s. [Junior School Books.]

THE PAGEANT OF BRITISH HISTORY. By E. M. Wilmot-Buxton, F.R.Hist.S. With 2 Plates in Colour and 8 other Illustrations. Crown 8vo, 1s. 6d.

THE ROMANCE OF BRITISH HISTORY; or, Britain's Rise from Savagery to Civilization. By Josiah Turner. With a Frontispiece in Colour and 8 other Illustrations. Crown 8vo, 1s. 6d.

THE GROWTH OF MODERN BRITAIN. An Outline History of the British People from 1830 to 1910. By H. B. Sutton. With a Frontispiece and 8 other Illustrations. Crown 8vo, 2s.

A SHORT HISTORY OF EARLY ENGLAND. To 1485. By H. J. Cape, M.A., F.R.Hist.S. With 6 Maps. Crown 8vo, 2s. 6d.

A SHORT HISTORY OF MODERN ENGLAND. 1714–1910. By Ernest Bowyer, B.A., B.Sc. With 7 Maps and Genealogical Tables. Crown 8vo, 2s. 6d.

STORIES FROM MODERN HISTORY. By E. M. Wilmot-Buxton, F.R.Hist.S. Crown 8vo, 1s. 6d. [New Historical Series.]

MAKERS OF EUROPE. Outlines of European History for the Middle Forms of Schools. By E. M. Wilmot-Buxton, F.R.Hist.S. With 12 Maps. Fourteenth Edition. Crown 8vo, 3s. 6d.

A JUNIOR LATIN PROSE. By H. N. Asman, M.A., B.D. Crown 8vo, 2s. 6d. [Junior School Books.]

EASY EXERCISES IN ALGEBRA FOR BEGINNERS. Containing 3,500 Original Problems. By W. S. Beard. Third Edition. Crown 8vo. With Answers, 1s. 9d.; without Answers, 1s. 6d.

EASY EXERCISES IN ARITHMETIC. Containing 5,000 Examples. By W. S. Beard. Eighth Edition. Fcap. 8vo. With Answers, 1s. 3d.; without Answers, 1s. [Beginner's Books.]

A NEW JUNIOR ARITHMETIC. By H. Bompas Smith, M.A. Third Edition. Crown 8vo. With Answers, 2s. 6d.; without Answers, 2s.

FROM MR.

EDWARD ARNOLD'S LIST.

DEUX CONTES DE PAUL FÉVAL: "Petit Gars"
 and "La Mort de César." Edited for use in Schools by A. C.
 LARMOUR, M.A., Assistant Master at Wellington College. Cloth.
 1s.

SUR LE FRONT ET AILLEURS. "Contes de
 Guerre." Chosis par JETTA S. WOLFF et annotés par A. S.
 TRÈVES. Cloth. 1s. 3d.

LES FRANÇAIS EN GUERRE. By JETTA S. WOLFF.
 With Notes and Vocabulary. 1s. 6d.

The Times.—"We cannot speak too highly in its praise. It is full of life and
 interest from start to finish: and it will be regrettable if only school children
 read it, for it would appeal very strongly to their parents."

OUTLINES OF EUROPEAN HISTORY, 1814-1914.

By G. B. SMITH, M.A., Assistant Master at the Royal Naval College,
 Osborne, Author of "Scenes from European History." With
 numerous maps. 2s. 6d.

Designed for the Cambridge Local Examination for Seniors, and in
 conformity with the Board of Education Circular No. 869.

A SOCIAL AND INDUSTRIAL HISTORY OF ENGLAND.

By F. W. TICKNER, D.Lit., M.A., B.Sc. (Econ.) London.
 Illustrated. 730 pages. Complete. 3s. 6d. Also in Three Parts.
 1s. 6d. each.

School World.—"This exceedingly attractive and remarkably cheap book is
 intended by its author to present 'such an outline of the nation's development
 along social and industrial lines as should, in his opinion, be read by all young
 students as part of their work in history.'"

A CLASS BOOK OF GEOGRAPHY. By A. W. ANDREWS,
 M.A. 665 pages. 115 maps. 5s.

Scottish Geographical Magazine.—"Within the same limits as to price and
 space, there is probably no school textbook which can offer such a wealth of in-
 formation on, or such a scientific treatment of, the subject of geography."

ENGLISH VERSE COMPOSITION. By A. E. ROBERTS,
 M.A., and A. PRATT, B.A. 2s. 6d.

Poetry Review.—"The best little book on the subject we have come across."

MODERN ESSAYS. Reprinted from Leading Articles in
The Times. With an introduction by J. W. MACKAIL, LL.D.
 viii+292 pages. 5s. net.

These essays are selected from among the famous "third leaders" of
The Times during the last year or two. They present admirable examples
 of modern English style, and deal with themes, round which the thought
 of all ages of literature has sparkled, in the spirit of the new century.

ESSAY WRITING AND AIDS TO COMPOSITION.

By GUY KENDALL, Assistant Master at Charterhouse School.
 Cloth. 2s. For pupils from 15 to 18, who have to begin writing
 "Essays." Leading from sentence structure through letter-writing
 and descriptive composition to the general Essay. A most sugges-
 tive and helpful book.

THE PRINCIPLES OF DRAWING.

By L. BELLIN-
 CARTER, F.R.S.A., Art Master at Wellington College. With numer-
 ous illustrations and diagrams. 2s. 6d. net.

An Art Master at a great public school says:—"Such a handbook as this is
 exceedingly valuable. This particular book has eminent merits. It is well
 arranged and extraordinarily clear. It deals with all the questions occurring to
 the student at the early stages of his work and with some others. It is written in
 good sensible English."

ARITHMETIC AND ACCOUNTS. By E. SANKEY, Head
 Master of the Derker School, Oldham, and G. A. LORD. In Two
 Books. Cloth. 1s. each net. [Nearly ready.

**INTRODUCTION TO MAGNETISM AND ELE-
 CTRICITY.** By E. W. E. KEMPSON, Senior Physics Master at
 Rugby School. 228 pages. 3s.

INORGANIC CHEMISTRY FOR SCHOOLS. By
 W. M. HOOTON, M.A., M.Sc., Chief Chemistry Master at Repton
 School. 416 pages. 3s. 6d.

THE RUGBY COURSE OF ELEMENTARY CHEM-

ISTRY. By H. P. HIGHTON, M.A., Chemistry Master at Rugby
 School. With 77 diagrams. Medium 8vo. Cloth. 2s. 6d. Inter-
 leaved. 3s. 6d.

Covers the standard of work for Woolwich and Sandhurst Examinations.

DREWRY.—On July 16, at
143 King Henry's Road, South Hamp-
stead, LONDON, elder daughter of the late Henry
R. Drewry, in her 82nd year.

TEACHERS' DIPLOMAS.

The COLLEGE OF PRECEPTORS holds Exam-
inations of Teachers for the Diplomas of Associate,
Licentiate, and Fellow of the College in London,
Belfast, Birmingham, Bristol, Cardiff, Cork, Dublin,
Glasgow, Leeds, Liverpool, Manchester, Newcastle-
on-Tyne, and Plymouth. The Associateship and
Licentiate Examinations are held twice a year,
viz., in the summer and winter vacations. The
Fellowship Examination is held only in the winter.
The Theory and Practice of Education is an
obligatory subject for each grade. For Regulations
apply to the SECRETARY, College of Preceptors
Bloomsbury Square, London, W.C.

EXAMINERSHIPS.

The Council of the College of
Preceptors invites applications for
additional Examinerships in ENGLISH
LANGUAGE, ENGLISH HISTORY, SCRIPTURE,
FRENCH, and SPANISH. Applications,
stating age, academic qualifications,
experience in teaching and examining,
&c., should be addressed to the Dean of
the College of Preceptors, Bloomsbury
Square, London, W.C., and should be
sent not later than the 31st of August.

THE
BERGMAN ÖSTERBERG
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT.

Trustees:

Sir GEORGE NEWMAN, M.D. (Chairman).
 Major WALDORF ASTOR, M.P.
 Dr. CHRISTOPHER ADDISON, M.P.
 Lord SHAW of DUNFERMLINE.
 The Marchioness of SALISBURY.

Principal:

Miss M. H. MEADE, B.A. (Moral Sciences Tripos).

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics, Stockholm).

The College was opened in 1885, and was the first of its kind in England. Students are prepared to be teachers of Scientific Physical Education on Ling's Swedish System. The Course extends over two years. It includes the study of Anatomy, Physiology, Theory of Education; the Theory and Practice of Gymnastics, Massage and Medical Gymnastics, Dancing and Outdoor Games. Students practise teaching in schools in the neighbourhood. The College stands in its own ground of 15 acres, in a beautiful and healthy locality close to Dartford Heath.

The demand for mistresses of physical training holding the Diploma of this College is at present far in excess of the supply.

The course begins in September. Further particulars may be obtained on application to the SECRETARY.

BERGMAN ÖSTERBERG
UNION OF TRAINED GYMNASIAC TEACHERS.
Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—**PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.**

WANTED.—"Child Life," "Child Study," "Child Monthly," "The Child." parcels of odd numbers; also "The Journal of Education" Volume for 1885, complete in Publisher's Binding, by JOHN DAVIS, 13 Paternoster Row, London.

SOUTHPORT PHYSICAL TRAINING COLLEGE.

Beautifully situated near the Sea in healthy surroundings.

President:

Admiral Lord CHARLES BERESFORD, K.C.B., M.P.

Principals:

A. ALEXANDER, F.R.G.S.; Mrs. ALEXANDER.

The Staff consists of Medical Lecturers and experienced teachers in every branch of Physical Training, including a Swedish Mistress from the Royal Gymnastic Institute, Stockholm.

GIRLS of good education are trained as scientific teachers of Physical Training to qualify them for appointments as Gymnastics, Games, and Health Mistresses in schools and colleges. The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Playground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

A Series of Practical OBJECT LESSONS

on familiar things in daily use, showing how they are manufactured. They include **ACTUAL SPECIMENS** of the several substances and products in their various stages of progression from the raw material up to the perfected condition for use. The whole series is compiled to illustrate in a practical manner many of the manufactures and productions of Great Britain and her Colonies, and are specially adapted for educational purposes.

EACH SET OF PROCESS SPECIMENS ON CARDS, 18 by 12, with Teachers' Notes, 2/6,

as follows:—

BRUSHES, "and how they are made," with explanatory notes, and specimens of bristles, fibre, bass, whisk, cane, the woods, &c., showing the substances in the several stages of manufacture, including a brush partly made, and exhibiting the mode of threading the bristles, &c. ... 2/6

COMBS, "and how they are made," with explanatory notes, and specimens of natural horn, showing the substance in the several stages of manufacture as partly made and completed, and polished comb ready for use ... 2/6

COTTON, "and how it is made," with notes and specimens of native cotton from the pod upwards, in its several conditions of spinning, manufacture, and dyeing, &c., to perfected sewing cotton, ready for use ... 2/6

GLASS, "and how it is made," showing the sand, potash, and other materials of which glass is composed, and specimens of the fused composition in the several stages of melting, &c., up to the perfected substance, with explanatory notes of glass manufacture ... 2/6

LEATHER, "and how it is prepared," with specimens of lamb skin and sheep skin dressed, dyed, tanned, grained, glazed, enamelled, hide tanned for boot soles, with explanatory notes on the several processes of tanning, tawing, currying, &c., by C. W. B. Burdett, Head Master, Leather Trades School, London ... 2/6

PAPER, "and how it is made," with explanatory notes on the art of paper-making, including specimens of wood pulp, hay, straw, esparto, and other vegetable fibre of which paper is made, with 20 samples of the various papers manufactured from the foregoing materials ... 2/6

PENCILS, "and how they are made," with specimens of graphite (or black lead) and cedar wood, showing the grooving, fitting in, polishing, and other processes in the manufacture of a cedar pencil, and explanatory notes ... 2/6

POTTERY, "and how it is made," with specimens of the materials used in its manufacture including sketches of the pug mill, mixing machines, and potter's wheel; showing the making up of china ware from the crude clay to a perfectly finished plate ready for use ... 2/6

RUBBER, "and its manufacture," with sketches made at Kew Gardens showing the methods of collection, the utensils in use, indicating the countries in which it is found and the purposes to which it is put, with samples of natural and prepared rubber, and other specimens ... The set, 2/6

SILK, "and its production," with explanatory notes on the manufacture of the silk from the cocoon to the silk thread, ready for use, with specimens of the same in its various processes of manufacture ... 2/6

SPONGE, "what it is and how it is procured," with 16 samples of native Egyptian, Florida, Cuban, and other sponges, from the Mediterranean, Florida, Gulf of Mexico, and the West Indies, with complete explanatory notes as to what sponge really is, the nature, definition, variety, and uses of the several kinds, with their geographical distribution ... 2/6

WOOL, "and its production," exhibiting its manufacture from the fleece of the sheep, step by step, to the finished yarn, in readiness for knitting, with accompanying notes for teachers' use ... 2/6

"La Guerre," Vol. II.

A French Reader, compiled from articles upon the European War selected from the leading French Newspapers. With Notes on Idioms by TAYLOR DYSON, M.A. 10d.
The subject matter of this Reader, from its retaining interest, leads the student unconsciously to a better knowledge of modern French construction. Many of the articles are of a conversational nature, and of the greatest value as supplying a means of acquiring a fuller vocabulary and a better knowledge of the subtleties of the language. Volume I is in use at all the great Public Schools.

SCHOOL PROSPECTUSES

Before placing your Order for a new Prospectus
please write to us for Specimens and Prices.

WE GIVE THE BEST WORK
AT REASONABLE CHARGES

We undertake the production of
Prospectuses throughout, including
Photographing and Making Blocks.

The Reason we give such particular attention to Prospectus printing is that, unlike other printers, our interest does not cease with the delivery of the goods. We introduce Pupils to Schools, and we find that an attractive Prospectus is the best means of interesting Parents and Guardians, and supporting our recommendations.

The Principal of an important School writes:—

“We must have got our new Pupils in the first place by our more Attractive Prospectus, and we much appreciate all the interest and trouble you took in the matter.”

A SCHEME of Advertising for the best London, Provincial, and Colonial Papers will be forwarded free on application.

OCCASIONAL NOTES.

COMMENTING on Mr. Alington's election to the Head Mastership of Eton, the *Pall Mall Gazette* expresses the hope that the methods he so successfully pursued at Shrewsbury "will be transplanted in the great foundation which every Englishman agrees to regard as the head and exemplar of our national school education." A more grotesque and provocative misrepresentation of the place of Eton in our national system it is hard to conceive. Eton is unique, and, in the educational revolution which our contemporary foresees, Eton is the last school to serve as a model; no more to be imitated than our House of Lords. It is an aristocratic federation of States or Houses, loosely held together by a Triumvirate, a Provost, a Vice-Provost, and a Head Master. Doubtless, a strong Head Master, who could hold the balance between the Humanities and Science, the New and the Old Learning, and who added to his knowledge infinite tact and patience, might in time effect drastic reforms. But Eton can never become a truly democratic school, or anything but a school for the upper classes. None but an iconoclast would wish to see it transformed into a public school in the American sense of the word. Dr. Lyttelton, with all his gifts, failed in tact and discretion, and his successor promises to avoid these errors. But it is no disparagement to say that none would point to him as the ideal Head Master of the future.

LORD CURZON the other day gave a striking account of what is being done for science at Oxford. He stated that the University possessed the best equipped

Science at
Oxford.

chemical laboratory in the country, that a scheme was being worked out for a degree in what he called "civil science" for men likely to go into public life, and a post-graduate course in science was also contemplated. What is still more noteworthy is the proposal—which, he said, would probably be carried—to make a certain knowledge of science necessary for a degree in arts. We presume that the Chancellor did not mean that chemistry and physics are to be added to the syllabus for "Greats." It is in the Entrance Examination, we suppose, that science will be an obligatory subject. Such a requirement would certainly react favourably on the teaching of science in the public schools. We welcome every attempt to foster the natural sciences at Oxford, but we do not expect ever to see Oxford competing in this field with the newer Universities, nor is it to be desired. Oxford must remain the special home of the humanities just as Birmingham, Leeds, and Sheffield will be the homes of science.

THE Chancellor, in the same speech, gave an eloquent outline of the knowledge a man ought to gain at a University as his outfit for "intellectual citizenship."

The Citizen of
the World.

He should acquire some insight into the history, particularly the recent history, of the institutions of his own and foreign countries, a general familiarity with the social, political, and economic conditions of the world, a practical command of some foreign languages, and a considerable acquaintance with geography. Such a vision takes us back to the comprehensive schemes of Bacon, Milton, and other Elizabethans, who thought more of training for life than preparing for schools. There is, we suppose, no University in Europe which gives its imprimatur to such a course of study as is here outlined. The professors would frown upon anything of the kind. They would call it "smattering" because it would not produce scholars or scientists. But it is the business of Universities to produce well equipped citizens of the world as well as scholars and scientists. The great majority of the men at Oxford and Cambridge will never turn out scholars or scientists, but many of them will become public men, administrators, diplomatists, or captains of industry, and the rest will be mainly members of the liberal professions or of the Civil Services at home and abroad, and for such Lord Curzon's curriculum is much better than either pure classics or pure science.

THE Interim Report of the Consultative Committee on Scholarships also takes us back to Elizabethan times. Scholarships, say the Committee, are given for the training of useful servants of the public. Commerce, agriculture, and industry are assumed to be national functions; they are in need of men highly trained in practical science; the scholarship system, therefore, must be so managed that a sufficient number of able young men and women will get this training at the Universities. The useful man is the ideal: a different ideal from that of "a scholar and a gentleman," but one not less worthy. The Committee recommend that a large number of additional scholarships from secondary schools to Universities and technical colleges should be provided, and also scholarships to senior technical schools, and from these to Uni-

versities, be established. Other recommendations aim at the strengthening of the higher parts of secondary schools, and the provision of maintenance grants for selected boys and girls from sixteen to eighteen. The total cost of the scheme would be about £340,000 a year—not a very extravagant sum. The document under consideration is an interim report only; it may be called the industry and commerce volume; the humanities volume is still to come.

AS a sort of *obiter dictum* in the middle of the Interim Report of the Consultative Committee occurs a paragraph condemning the present system of competition for Second Division clerkships. The Committee reckon that there are at any given moment some two thousand young men of seventeen to twenty years of age being prepared—in most cases crammed—for this competition, a number not far below that of the boys of seventeen who are attending grant-aided schools. Many of the youths, the Committee declare, are too good to be Government clerks; they seek such a position for the sake of its security and respectability; young men of good brains should go into industry and commerce; the merely average man is quite good enough for Government clerical work. This, no doubt, is true, but the remedy is not easy to see. Let the Government just take as many respectably educated mediocre boys of sixteen as they want, say the Committee; Government clerkships should not be regarded as the reward of superior merit. But what is to be done if there are three times as many applicants as posts? Are they to draw lots? or are the Government Departments to send officials round the schools with orders to discover the most mediocre, the most perfectly colourless? The interview system would certainly be denounced as a veiled form of patronage. The only alternative to open competition, as far as we can see, is a system by which a number of posts would be allotted to each school, according to its size, and the task of discriminating between the applicants left to the head master. Whether such a scheme would be feasible, we doubt; that it would excite great discontent, we feel certain.

COMPETITION indeed seems likely to remain with us. The Consultative Committee themselves confess that it must continue to rule the award of scholarships from secondary schools. No practical method other than competitive examination has yet been suggested, and all they can recommend is a slight admixture of "interview." Happily, competition is as much a blessing as an evil. There are few schoolmasters who do not make use of its potent influence. Public competitive examinations are merely a transference to a wider field of the methods employed by every teacher who gives marks. They have at least this much of good in them, that, with three boys out of four—not with so many girls perhaps—they are probably the most powerful stimulus to exertion that they can have. They compel careless and idle youngsters to put their backs into their work, and to strain every nerve in pursuit of their object. Few better things can happen to anyone, young or old, than to be forced to strain every nerve, even if it is only for a short period. That moral good at all events can be put against the undeniable intellectual harm wrought by Civil Service Examinations. On the whole, competitive tests are more a blessing than a

curse. The sporting element is closely intertwined with education, and if we eradicated it we should probably do more harm than good.

THE Presidential Address to the Friends' Guild of Teachers by Dr. Bevan Lean, Head Master of Sidcot School, is instructive, though the special texts that he recommends for framing a *livret*, or record of school life, would be applied only in a limited class of schools. Thus, "the information derived from parents" as to the pupil's antecedents will generally be worthless, though much may be gathered when a personal interview is possible, and similar objections might be taken to the other device for tabulating the pupil's heredity and environment. Yet to find a head master who not only acknowledges but acts on the principle that he is responsible for the individual pupils committed to his charge and is prepared to render an account of each is a great step forward, and we would say nothing to damp his ardour. It would be well, however, to bear in mind that the schoolmaster is not, and can never be, the analytic chemist dealing with dead matter. Like the modern physician, he will be compelled to study his art as an art, and not as a branch of divinity or classics or physical science, and will, like him, keep his case-book; but man is *un être ondoyant* and the qualities on which his success depends will still be mainly intuitive and unanalysable, the magic of personality, and sympathy with the young, which, like charity, is the greatest of all virtues.

WE welcome the interest shown by so many distinguished persons, and by a considerable section of the public, in the reform of education, but we hope that teachers are not going to let the laymen have it all their own way. Last January we remarked how small a part teachers took in the discussions at the educational meetings. Their function was chiefly to sit in the gallery and cheer the amateurs who occupied the stage. Teachers have, in fact, a most unfortunate habit of losing their tongues when they are in the presence of an outside public. We have recently seen more than once the spectacle of schoolmasters sitting "silent in the stalls," whilst distinguished politicians and publicists, who had never entered a school since their boyhood, instructed them in their duties. The teacher must remember that, while the opinion of other persons on the aims and broad features of an educational course may be very valuable, he is the only man who knows what is possible. He is liable to get into a groove, and a stimulus from outside may be useful in getting him out of it; on the other hand, the layman is prone to be in the clouds, forgetting how limited is the capacity of the boy and girl, and how difficult to them are many things that seem easy to the adult. It is when the teacher brings his practical experience to bear on the theories of the layman that discussion is most fruitful.

THE Government have decided on an inquiry into education by Committees, and the idea of a Royal Commission is dropped. We believe the decision to be a wise one. A Commission bound to investigate the whole field of education, and working by the slow and cumbrous methods which are traditional with such bodies, would be merely a barrier in the way of action for the next five years at least. Committees whose field

A School
Record.

Competition for
the Civil Service.

Teachers and
the Public.

Competition.

The Government
Scheme
of Inquiry.

of inquiry is limited will work more rapidly. At present it is proposed to set up three. The first will consider—or is considering, for it already exists—the problem of the education of young persons after the War, especially those who have been abnormally employed. This is extremely vague; but we gather from what Mr. Henderson said that the connexion between education and employment is the point on which stress will be laid in the terms of reference. We presume that the question of continuation schools will fall within the purview of this Committee. If it does not, another Committee ought to be appointed for that subject. The time is more than ripe for a beginning to be made. It is universally confessed that half the benefits of primary education are lost by our system of letting boys and girls run wild from fourteen onwards.

THE second Committee will inquire into the teaching of science, especially in Universities and secondary schools, and the application of science to industry. We

**Science and
Modern
Languages.**

are glad to note that it will contain some members who can speak on the connexion of science with a general education. The disaster of letting the humanists and scientists shut themselves in watertight compartments must be avoided. The third Committee, that on modern languages, will have a wide field of inquiry. It will have to discover, first and foremost, why language teaching, in spite of great improvement, is still so much like the curate's egg—good in parts. It will have also to investigate the qualifications of the teachers, their opportunities for training and study abroad, and their emoluments; the provision of scholarships for modern languages, the prospects of a career held out to modern language scholars, and the adjustment of the claims of rival tongues. It will have to make proposals for the foundation of more University Chairs, and for the encouragement of post-graduate study. We trust that the deliberations of the Committee will not degenerate into a study of the best recipes for providing competent clerks and commercial travellers. It will be the duty of language teachers to press the claims of foreign languages and literatures as part of a broad liberal education, and a knowledge of foreign nations as a necessary part of the equipment of a citizen in the twentieth century.

INDEED, in its broader aspects, the question concerns not language teachers only, but all the teachers of the humanities, and all who believe that the humanities

**The Defence of
the Humanities.**

ought to form the backbone of education, at least till the age of specialization begins. The Government Committees have been created in response to a demand that education shall be directed to more definitely useful ends. With this demand we have every sympathy, provided the word "useful" is given a sufficiently wide signification, but unfortunately many of the agitators conceive of it as synonymous with "industrial and commercial." Against that view all teachers must set their faces like a flint. We wish to see science teaching strengthened in schools and Universities, but the strengthening of science must not mean the weakening of the humanities. But let us recollect that vague generalities in this matter will not do much good. The defenders of the humanities must be prepared to state in terms of subjects and hours what they think are the requirements of the various types of schools. They must be ready to hand in businesslike

statements to a businesslike Committee, to make concessions, and accept compromises. Conference between the humanists and scientists is eminently to be desired. A concordat drawn up by representatives of the two bodies, and adopted by the associations concerned with the various subjects of the curriculum, could not fail to carry great weight.

WE feel inclined to plead for a fourth Committee, whose duty would be to inquire into the supply of teachers, both in elementary and secondary schools.

**The Supply
of Teachers.**

It is the question which lies behind every other. If we cannot get the teachers, all our schemes for reform will be useless. But no one seems inclined to face the question fairly and squarely. We cannot find it even in the extensive program of the Education Reform Council. Mr. Henderson does not suggest a committee to deal with it. The Board of Education, in their Report for 1914-15 just published, reiterate the note of warning which they have been sounding for years, but their only suggestion is that a few more teachers might be found amongst the elder boys and girls in secondary schools who are not bursars, a source of supply which is not likely to prove very prolific. The London County Council are contemplating, as a desperate remedy, offering free secondary education to any boy or girl who is willing to become a teacher. Other Local Authorities are falling back on the old pupil-teacher system. Unhappily, they are all beginning at the wrong end. There is only one way to increase the supply of teachers, and that is to make the service more attractive by providing better salaries and better pensions. As Mr. Henderson said of the problem of education generally, it is a question of money, more money, and yet more money.

THE Oxford and Cambridge Joint Board, following the suggestion contained in Circular 849, have produced a scheme for an examination of Sixth Forms who

**The Modern
Humanities.**

have given two years' study mainly to a definite group of subjects. The groups are four—Classical Studies, Modern Studies, Mathematics, Natural Science—and there is a list of twenty-four subsidiary subjects, one of which must be taken along with a group. Boys and girls who devote the last two years of their school life to the modern humanities are offered a choice of combinations. They may take two languages (one of which may be Latin without composition), a foreign language with history, or with English Literature, or with the compound English History-and-Literature. The weakness of the syllabuses in French and German is the predominance of imaginative literature. In French, for instance, the only prose works set are Gautier's *Voyage en Espagne* in one of the alternative periods, and some of Madame de Sévigné's *Letters* in the other. In German poetry and drama almost monopolize the field. No foreign history is required, except such as may be needed for "the literature of the period in its historical setting." The contrast with the classical group is marked. A knowledge of Greek and Roman history is demanded, and Cicero, Livy, Tacitus, Thucydides and Demosthenes all appear on the list of set books. The classical literature that is read by boys and girls has, it must be confessed, a breadth and fullness of humanity which the modern literature that reaches the classroom cannot claim. Until the modernists rectify this, the con-

tention that the study of the classics gives the broadest and most humane education will have much force.

WE hope for the sake of the classics that the report given by the *Times* of the interview between parents of boys at the public schools and a committee of head masters of public schools is defective. The object of the interview was to urge upon the head masters that more attention should be given to science and modern languages. The answer of Mr. Lowry, of Tonbridge, was that classics had saved us from being the nation of brutal materialists that the Germans are. Mr. Lowry apparently forgot that classics form at least as large an element in German education as in English. Sir John McClure told a little story, the moral of which was that "schoolmaster" was in England a term of opprobrium. This may be as true as it is melancholy, but its relevance to the subject under discussion is not clear.

The remarks of Mr. Lionel Ford, of Harrow, were more to the point. He declared that at Harrow modern students, if the Army Class be included, are to classical students as two to one, that all boys learnt science, and that boys who wished to specialize in science had every opportunity of doing so. No doubt this is all quite true of many public schools, yet we are not satisfied. What we should like to know is whether science is studied at Harrow and elsewhere with the same zeal as classics, whether the same rewards are held out to the scientist as to the scholar, whether on all modern sides modern languages have the same position as classics on the classical side, and why if mathematics get their full share of attention so few public-school boys attain distinction in that subject at the Universities. Mr. Ford would surely have done better to admit that the public schools are the creatures of a great tradition and have all the weaknesses as well as the strength that that position implies.

MR. LOWRY'S contrast between Krupp and Lord Cromer as typical products of science and classics was not very happy. Alfred Krupp, the virtual founder of the great factory which bears his name, was born in 1812 and educated at the *Gymnasium* at Essen. It is pretty safe therefore to say that his education was almost purely classical. Lord Cromer, on the other hand, was educated at military schools, including Woolwich Academy, where he certainly studied more mathematics and science than classics. He did not begin Greek, as he himself has told us, till long after he left school.

LOCAL AUTHORITIES.

THE Parliamentary debate on the education estimates was reassuring. The President displayed a knowledge of the work of his department, and an appreciation of its problems, scarcely to be expected, and all the speakers contributed observations and suggestions of interest and value. The discussion ranged from matters of relatively unimportant detail to important questions of far-reaching principle. But throughout it was well informed, discerning, and helpful. Perhaps of all the wise words uttered, in a debate which must remain memorable, those of Sir H. Craik deserve to be remembered and reiterated. "There is a very great danger," he said, "of a certain fussiness and a certain exaggeration in regard to education. We must not shut our eyes to the fact that education is a very useful thing, but there are an immense number of faculties, of powers,

of great assets to the nation, that develop themselves entirely independent of your educational processes, and are all the better, perhaps, for being independent of those educational processes." Sir H. Craik also said that all his experience and study had led him to the conclusion that the first principle of our education should be simplicity in the curriculum; the second, "leave initiative to the schools."

THE problem referred to by many of the speakers, which is at once so easy to talk about and so difficult to solve, was the lack of direct co-relation between elementary and secondary schools. "Nothing in my time," said Mr. Ramsay Macdonald, "has done more damage to elementary education than the unfortunate attempt to skim off the cream at the top and send these smart boys to another set of schools." Mr. G. Harvey urged that every elementary school, or in some convenient centre in every school district, there should be facilities for higher-grade education. "I would we had such a leaving age," declared Mr. Goldstone, "that boys and girls in elementary schools could be brought in association with the same school until the age of sixteen was reached." And Mr. Whitehouse proposed this sweeping reform in our educational system: "We want to cease regarding elementary schools as schools which can give a complete education by the ages of thirteen or fourteen, with a possible coping-stone in the form of evening continuation schools. We want to see that every child receives secondary education." There is no doubt that the early removal of children of ability from the smaller elementary schools tends to depress the work of those institutions, and there is also no doubt that, unless the secondary-school course begins at the age of twelve or thereabouts, it will be of little value.

THE field of education is wide, and the crop which it is capable of yielding and the methods of cultivation to be followed are matters of unfailing interest and importance. But the President of the Board was well advised when he insisted that the chief condition of progress is additional money. With increased resources we can irrigate the dry places and fertilize the barren soil, or, as Mr. Henderson said, "If this machine is to be made to go better, if it is to go faster, it can only be driven with money. I have very seriously come to the conclusion that that is the only way we are going very greatly to improve our position."

It is to be regretted that the Board of Education do not propose to publish for the year 1914-15 the usual statistical volume. This economy is, of course, due to the desire of the Board to reduce the amount of detailed administrative work imposed upon their staff, and incidentally upon the staffs of Local Education Authorities. In their general report for the year 1914-15 the Board refer to the possibilities of economy in current educational expenditure enjoined upon them by the Treasury Committee on Public Retrenchment. They record their conviction that the claim to regard reductions of expenditure on the public service of education as true economies requires, in the case of every item, the most careful scrutiny. The difficulty of effecting any substantial reduction is demonstrated by a consideration of the figures. In 1913-14 the Local Education Authorities spent £26,250,000 on elementary and £5,250,000 on higher education. Two-thirds of this total was expended on salaries of teachers. The Board of Education vote is about £15,500,000 a year, but 96 per cent. of this sum consists of grants to Local Education Authorities. The expenditure of these Authorities during the three financial years preceding the War increased steadily by over £1,000,000 a year. In 1914-15 the increase was £900,000, and for 1915-16 is estimated at £350,000. This increase of £350,000 is more than accounted for by the additional sum expended on the salaries of elementary-school teachers.

A TABLE showing for England the number and accommodation of Council and voluntary schools at the time when the Education Act of 1902 came into force and on July 31, 1915, is of interest. It suggests that those who believed that the Act would prove a "slippery slope" for denominational schools, and those who predicted an extension of voluntary institutions, were equally at fault. Council schools have increased from 5,049 to 7,358, and voluntary schools decreased from 13,438 to 11,796, with a corresponding change in the character of about a million school places; but, of course, a large number of voluntary schools in 1902—British, Colliery and others—were not distinctly denominational, and they were naturally transferred to the Local Authority. It is only to be expected also

that additional accommodation, when required, should usually be provided by the erection of a Council school.

SATISFACTORY progress is recorded by the Board as regards secondary education. The total number of schools eligible for grant was 929, as compared with 910 in 1913-14. Of these 436 were controlled by Local Authorities; 424 were "endowed," or schools of a similar type; 25 were schools of the Girls' Public Day Schools Trust; and 44 were controlled by Roman Catholic orders or communities. The pupils totalled 180,507 (96,039 boys and 84,468 girls), as compared with 170,236 pupils in 1913-14. There were also 125 other schools not on the grant list, recognized by the Board as efficient. These were educating 23,033 pupils (14,079 boys and 8,954 girls). The Board are of opinion that, while the quantity of school provision supplied is being fully maintained, not only the quality of the education given, but the effective advantage taken of it, is increasing. It is becoming more widely realized that education must, in the national interest, be taken more seriously and the quality of the product which issues from the secondary schools improved.

THE Board of Education are able to record some improvement in the number of pupils recognized for the first time as "intending teachers." The total number enrolled was 6,096, as compared with 5,517 in the previous year and 5,022 in 1913-14. It is satisfactory to observe a continuous increase in the number of student-teachers not previously recognized as bursars. In 1914-15 the number was 390, compared with 264 five years previously. The Board direct the special attention of Local Authorities to this possible means of supplementing the supply of intending teachers in their areas. There may well be found in all secondary schools a number of pupils who did not become bursars either because they did not need assistance or because the idea of becoming teachers had not at the time occurred to them, but who would make useful recruits for the profession if the possibility were laid before them on reaching the age of seventeen.

SCIENCE NOTES.

THE Board of Education have now published [Cd. 8291, price 4½d.] the interim report of the Consultative Committee on Scholarships for Higher Education. It is a document of seventy-four pages containing recommendations of the highest importance. A general idea of their nature may be deduced from the proposed annual expenditure from national funds, viz.: (1) £100,000 for strengthening the higher parts of selected secondary schools; (2) £90,000 for maintenance to scholars in secondary schools from sixteen to eighteen or nineteen; (3) Government scholarships from secondary schools to the Universities—£67,500 or £68,500; (4) £25,000 to Local Authorities for local scholarships as in (3), with a recommendation that a considerable proportion should be given to women; (5) £27,000 for scholarships from senior technical schools to the Universities; (6) £20,000 for research scholarships.

THE total of the above proposals is £339,000 per annum, a sum which is useful, although not impressively bold. The statement of principles and the methods of award should be attentively studied; we hope to return to the subject in later notes. For the present we must be content to say that we heartily agree with the Committee in putting foremost among objects to be attained "the training of men and women according to their capacity that they may serve public ends in the manner for which they are best fitted." It is explained that in this interim report consideration has been limited to higher education in science and technology, and that the furtherance of industry, agriculture, and commerce, regarded as national concerns, has been the special aim. We note with pleasure the stress which is repeatedly laid on the provision of training for women in scientific work of an industrial or professional character. There is, perhaps, too little said of the need to strengthen the learned professions.

THE Committees of the Education Reform Council have been pursuing with commendable energy their formidable task of overhauling our educational organization and methods. The particular Committee to which elementary school curricula are entrusted have

stated very sound views on "manual training" and the preparation for science of children under twelve. Every elementary school should give a continuous course of manual training to all children. The work should be non-technical, and should be of two kinds—(a) training in the simpler universal arts, inspired with a feeling for craftsmanship; (b) illustrative of other subjects in the curriculum. With regard to instruction in geography, Nature study, and mathematics (i.e. ideas of space and number), the Reform Committee consider that the pendulum has swung too far from the old dogmatic position to an over-estimated "scientific" mode of explanation. More scope should be given for the child's natural love of information and his utilitarian sentiment. Rationalization is a gradual process. We hope that these ideas will bear fruit not only in the primary schools of the public elementary type; their importance is at least as much in need of recognition in the preparatory schools.

ONE of the benefits to be looked for as a result of the spread of scientific knowledge is the lessening of superstition. In some recent examination answers we noticed an instance of the new superstitions which bad science teaching actually engenders. Several of the candidates stated that the presence of traces of ammonia made drinking water poisonous, and not a few roundly asserted that typhus was caused thereby. The sole reason for avoiding water containing traces of ammonia is that the presence of this substance makes it highly probable that the water has been contaminated with sewage. Ammonia in any appreciable strength is, of course, poisonous; but it is important that all members of the community should understand that epidemic disease comes from germs, and these from their like. A superstition of a different class is often taught by teachers who are ignorant of hygiene—viz. that the habit of drinking water leads to the habit of drinking intoxicants. The opposite is the more likely result. Most people would benefit by drinking more water; for children it is quite important that there should be plenty of accessible drinking water; they need it more than adults, and can hardly have too much.

AT the outbreak of the War attention was called in these notes to the importance of care and economy in the use of laboratory ware. We have since had welcome opportunities of referring to the success which British manufacturers have achieved in producing glass for chemical apparatus, as seen for example at the exhibitions of the Association of Public School Science Masters. We have just received a pamphlet from the Worcester Royal Porcelain Works containing an account of comparative tests between their new "Royal Worcester" laboratory porcelain and the well-known "Royal Berlin." The National Physical Laboratory pronounce the new ware to be as good as the best Royal Berlin ware. In former years we came to the conclusion that it was the truest economy in school laboratories to pay the top price and have Berlin ware. In future there will be no need to send abroad for the porcelain crucibles, &c., which have such important uses in all teaching of chemistry.

THE Association of Public School Science Masters will meet at Eton College on the 3rd and 4th of next January. The Eton authorities and staff have kindly invited the Association, and it is hoped that the social side of the meeting will be much strengthened. The meeting will be under the presidency of Prof. H. H. Turner.

MESSRS. NEWALL, BAXENDALL, & BUTLER have just announced that the group of lines in the solar spectrum, marked "G" by Fraunhofer, is due mainly to undissociated hydrocarbons. It is absent from the chromosphere and diminishes in intensity as one passes in the stellar sequence to stars hotter than the sun. The discovery is therefore likely to lead to improved stellar classification as well as to more defined knowledge of the solar photosphere.

THE LEEDS TRAINING COLLEGE.

BY the time that this is in our readers' hands we hope that it will have been announced that the Board of Education have acted under the powers assigned to them by their own regulations, and undertaken a public inquiry into the circumstances which have led to the resignation of the Vice-Principal

and nine members of the women's staff of the Leeds Training College. The matter is serious, and does not concern Leeds alone. In 1913, in announcing the formal opening of the College by Mr. J. A. Pearse, we said that this marked a new departure in the training of primary teachers. The building, including site and equipment, had cost a quarter of a million, the bulk of which sum was defrayed by the Board of Education. It was designed to hold three hundred women and one hundred and eighty men, and towards the annual expenses the Board contribute £21,000 a year. Yet it is hardly credible that the government of this College is committed to the Leeds Education Committee, and that the Leeds University is neither represented on the Committee nor takes any part in the teaching. How far the Leeds Education Committee is competent to discharge the duties assigned to it we can judge from the report of the proceedings that appeared in the *Yorkshire Post* of June 29. The same number contains an official report of a "Talk," by Mr. James Graham, Secretary of Education to Leeds, and also Secretary to the Governors of the College. This "Talk" was addressed to the resident tutors of the College and the house-keepers. It consists wholly of gossip and tittle-tattle charges of wastefulness, indiscipline, and untidiness that he had himself observed on the women's side, with no attempt to substantiate one of these charges.

Prof. Findlay writes none too strongly in a letter to the *Manchester Guardian*: "If you want to fill your schools and colleges with men and women of energy and spirit, you must give them scope, and not hand them over to clerks and officials as if a college were a sort of workhouse ruled by Bumbledom."

The Chairman of the Higher Education Sub-Committee treated the resignation of Miss Mercier and nine of the women tutors, without cause assigned, as an unpardonable act of insubordination, and announced that the Council would proceed at once to fill their places. He spoke of them as a mere fraction of the staff, which numbered nearly fifty, including, apparently, the housekeepers and domestics. The numbers left after the resignations are, if we are rightly informed, eight women and sixteen men, eight of whom are absent on active War service. But his main point was that the resignees have no case, because they have refused to state their case in the press, or to appeal to the present Governors. Can we wonder that they decline to be heard by a tribunal which puts forward Mr. Graham as their spokesman?

The nine, to say nothing of Miss Mercier, sometime Director of Studies and Lecturer in History at Girton College, are all of them women of large experience, several with high University Honours. Such women do not resign in a fit of temper, or risk their chances of future employment. The charge of indiscipline is indignantly repudiated by past students who have come under Miss Mercier's rule, and, in particular, they tell us that the cases of smoking are confined to three or four students, who offended when first they joined the College, but never repeated the offence. We cannot see on what grounds the Board of Education can decline to institute an investigation which has been asked for by independent bodies, such as the Training College Association and also, we believe, by the Registration Council of Teachers.

"VIVE LA FRANCE QUAND MÊME!"

ON July 12 M. Maurice Barrès gave the first of the lectures on "Aspects of Art," under the Henrietta Hertz Trust. He took for his subject "Le blason de la France, ou ses traits éternels dans cette guerre et dans les vieilles épopées." Lord Bryce, in introducing M. Barrès, said that not only was he one of the most distinguished French writers of his day, but that he had been among the foremost in awakening patriotism throughout France.

Patriotism was the note of M. Barrès' lecture, a fight for

the *blason* of France—for liberty, equality, fraternity. He dwelt on the religious fervour which inspires the French soldiers of to-day, and gave many touching instances of the lofty spirit of self-sacrifice which animates them.

Let us add to the testimony of M. Barrès that which for the last two years has been contained in the pages of the *Bulletin Administratif du Ministère de l'Instruction Publique*. Before the War this was an official document containing all administrative news, examination results, inspections, promotions, &c., with an occasional ministerial address—somewhat formal matter, interesting only to a section of the community. Since the War this *Bulletin* has become one of the most intensely human and moving documents it would be possible to find. It opens each week with its "Livre d'Or de l'Université." There we find the names of the killed and wounded, be it professor, teacher, or student in training, and, following on these names, "Citations à l'Ordre de l'Armée." What are the qualities which distinguish these teachers turned soldier? We can only mention a few of the most outstanding ones which recur again and again in the *citations*, but sufficient to show that the qualities of a fine teacher have a close connexion with the qualities of a fine soldier.

First, "courage, le plus constant, exceptionnel, héroïque, un sang froid et un courage hors de pair, courage réfléchi, d'une bravoure et d'une solidité au feu, digne des plus beaux éloges, d'une bravoure et d'un entrain légendaires dans le brigade." Then, "dévouement, le plus grand, absolu, inlassable," and "abnégation, au-dessus de tout éloge, complète"—calmness, intelligence, indomitable energy, initiative, good humour, modesty. How can we choose from this noble army? Richard, who spends sixty-eight hours in hand-to-hand fight and "a fait preuve d'un grand courage, d'une énergie indomptable, d'une autorité, d'un entrain électrisant les hommes et d'un mépris héroïque de la mort." Rosier, seriously wounded in the face, who looks after the wounded for twenty-four hours before having his own wounds seen to. That "fanatique du devoir militaire, apportant dans sa réalisation la conception la plus noble," or he, whose magnificent courage was only equalled by his modesty. Rimey, who "par sa grande activité depuis le début de la campagne, son allant et sa joyeuse insouciance, a pris un très grand ascendant sur les hommes." Murat, "jeune officier possédant, sous des dehors modestes, une volonté invincible, un courage à toute épreuve, une énergie surhumaine, une activité inlassable." Lebeau, "grande intelligence et grand cœur." Piglowski, to whom the Germans raised a monument to commemorate his courage and patriotism.

Nor are the non-combatant teachers without their meed of praise. The teaching staff of Reims who, through ceaseless bombardment, carried on the teaching of over 1,300 children, thus in a measure contributing to their safety, and the women teachers of Arras, caring for the children in the cellars with "belle humeur et sang froid."

M. Paul Painlevé, Minister of Public Instruction, has delivered several memorable addresses, which appear in the *Partie non-officielle*. In an address given at a gala matinée for the benefit of wounded soldiers, he says the absurd prejudice has finally been overcome which makes out that men of letters are ill prepared for the soldier's virtues. "How moving (he says) is the witness of the *citations*, which speak not only of the bravery, coolness, and endurance of these men, but also of their superior moral and intellectual qualities. Their education, their culture imposes on them, more than on others, imperious duties, for they know all that the word *France* signifies; they know that if they yield there will be neither joy, liberty, nor justice in the world."

In an address at the International Education Conference in June 1916, he speaks of the future of education. "As compulsory primary education was the outcome of the War of 1870, so (he says) must compulsory post-school education, both for girls and boys, be the outcome of this War—an education arrived at by a national organization of all depart-

ments. A man must not be shut up in his trade, even if he excels in it. He must have wide knowledge, a sound physique, and must feel himself a citizen of his country."

May not the adjurations of the dying have a wider significance than that of the field of battle—the cry of the mutilated form that rises up in one supreme effort, "En avant, les amis, c'est pour la France!" and yet another, "Vive la France quand même!"

"DAVID BLAIZE" AND OTHER PUBLIC-SCHOOL STORIES.

By S. P. B. MAIS.

WE old fogies, whose schooldays date back to the last century, were well content to read of the deeds of derring-do perpetrated by such splendidly coloured heroes as *The Willoughby Captains* or that audacious *Fifth Form at St. Dominic's*. Not so the forward youths of to-day. They have never heard of *Eric*, or dismiss it as sentimental humbug that they were given for Sunday reading; *Tom Brown's School Days* is to them an historical novel, to be classed with *Midshipman Easy* and *Harry Lorrequer*.

Our fathers, they say, must have had a jolly good time of it at school, where such full-blooded orgies apparently were a commonplace; but we, for our part, have to resign ourselves to a more humdrum existence. There are no break-neck descents from dormitory windows by the aid of knotted blankets in 1916, no drunken revels or hairbreadth rescues of distressed maidens; we come back to school from the whirl and gaiety of town and submit ourselves to a term of rigorous discipline, with every hour of each day mapped out for us exactly in the form-room and on the playing fields. Not for us are the circus and the public-house, flirting with barmaids or associating with "bookies." Rarely, indeed, during our thirteen weeks' sojourn in the wilderness of school, do we meet anyone connected with the outside world. Our masters are the only grown-up people with whom we come into contact. Through them, in a diluted form, we get the news of the world; we see the chaotic upheavals which take place outside through their glasses. We are bound up in the absorbing interest of house caps and school colours, with interruptions of work and the various subterfuges at which the wiser wink. Most frequently are we to be seen dashing from rehearsal to choir practice, from physical training to the miniature range, from Corps parade to the swimming bath or the fives court. Would that we could live as "Stalky" lived, if ever such a creature as Beetle and his boon companions could have been permitted to live in any school in the kingdom. No, if the truth be told, the average schoolboy of to-day has come to the conclusion that the public-school story never has been, and by the very nature of our life never can be, written.

It is essential for most readers that novels should be saturated with incident, and there are no incidents in the history of the normally healthy schoolboy. Witness his Sunday letters home; weekly he has to rack his brain to think what to say. He has read a few hundred lines of Euripides or Homer, he has tackled the Binomial Theorem or the solution of Triangles, he has gone up or down a place in form order, he requires 5s. for subscriptions to the bath and the Red Cross Society, he has heard a good or a "rotten" sermon, he has had a "footling" or a "ripping" field day, and has had a cold, but not gone to the sick-house, as the next day there was a match. Yet there have not been wanting courageous spirits who have dared, with the meagre material at their command, to weave round the life of the schoolboy a modern romance.

First of the new school came Mr. H. A. Vachell, full of honours as a popular novelist, wishing to do justice and to pay a compliment to his old school, Harrow. *The Hill*

immediately attracted countless readers, and stands alone even after fifteen years as a consummately told romance of schoolboy friendship. Over it there hangs the glamour of *The Forty Years On* theory; all old boys love to think that they were once like Verney, that villains like Sayce really existed in their time, and they dream over again of a time on which they look back as the happiest time in their lives. It was not really such, but it is delightful pretence. Mr. Vachell was, however, not allowed to stand unrivalled long.

Mr. St. John Lucas, to whom justice has never yet been done, in *The First Round* attempted with complete success to show us the life of a misfit at a public school. His hero was a musical genius who came into contact with a type of boy friend, by no means so uncommon as a thoughtless public would like to believe—the type that is grown up in thought while still a boy in years; there are many such in every school in England. Mr. Lucas anatomized the recesses of the mind of that kind of boy who thinks for himself and conceives a divine discontent with the attitude of the bovine herd of games-lovers who lord it over the rest at all great public schools. It is a platitude that we schoolmasters do not trouble to deal with abnormal cases. The genius is not provided for at school: *aut disce aut discede* is the rule—he must conform or go. (He is usually ejected for kicking over the traces.) From want of a helping hand or a sympathetic elder friend, masters as a whole are not too friendly towards the ardent lover of poetry, the arts, or the specialist in any branch of science.

Mr. Hugh Walpole next entered the lists with a book from the master's point of view, an entirely new departure. In *Mr. Perrin and Mr. Traill* we were shown all the naked horrors of the second-grade public school, where life for the ardent young master full of zeal was made a veritable hell owing to the niceties and formalities which he was called upon to observe. We were shown the feckless, futile, elderly men who had drifted into schoolmastering, and had, for want of mere energy or ambition, slowly subsided into the abyss until it was too late to change their profession. It was all very sad, wellnigh in places bordering on the terrible, but it was also appallingly true.

Close on Mr. Walpole's heels came the cleverest young man of the age in Mr. Compton Mackenzie, who had already published two novels which had placed him in the front rank of living novelists. In *Sinister Street* we were presented with every detail of the protagonist's life, given with meticulous care, reminiscent of the pre-Raphaelite school of painting, so that we should not miss any of the influences which went to mould the man Michael Fane. It was overwhelmingly successful; here at last, we felt, is the real school story; every master with whom Michael worked was painted with scrupulous care, every incident of term and holiday was there, so that nothing should escape us. And, in so far as Mr. Mackenzie recognized that delineation of character is the fundamental principle on which the story of school life must be formed, he deserves undying gratitude. His failure is owing to the fact that he took a day school, and so was enabled to procure incidents to colour and vivify his novel, which would be out of the reach of any man writing about boarding schools.

Mr. Arnold Lunn, in *The Harrovians*, published a counterblast to *The Hill*, and ruthlessly exposed the shams of the earlier romance, but he did little more than earn the eternal hatred of all lovers of Harrow. He professed to give us pages from his diary, but it was plain that his object was to make our flesh creep, and that his House must have been abnormally corrupt—*monstrum nulla virtute redemptum*. He had the added misfortune of being a realist without a sense of beauty, a defect for which it is extremely hard to forgive him in the light of the artistic glory of Mr. Mackenzie's work.

Mr. Ivor Brown, in *Years of Plenty*, at times gives us a sense of the real thing, but he was neither clever enough nor honest enough to hide nothing; he, too, must be reckoned among the shirkers, and so we are left with Mr. E. F. Benson, who comes last into the dangerous field of com-

petition, after years of success as an eminent novelist, with his *David Blaise*. This book was hailed by the *Times* as the finest school story ever written. That it is a finished product, conceived and executed with the fine artistic touch, is true, but it is nothing more; it is on a par with *The Hill* and not in the least what we were looking for. We can admire the well oiled machinery, the delightful economy of detail, and the piecing together of an amusing piece of mosaic, but it never really touches the enchanted ground. Mr. Benson is too old for this sort of thing. His picture of the days of innocence at a preparatory school is glorious and probably true; at any rate, it is humorous, but he simply does not understand the workings of a boy's mind between the ages of fourteen and nineteen, or the intricate, delicate machinery of a public school. He writes from outside; there is no suggestion of experience from beginning to end—it is all make-believe, very clever feigning of a kind that will immediately appeal to nearly all mothers and not a few fathers. But it does not help those of us who want the life and development of the average boy told once for all.

Mr. G. F. Bradby still holds the field, in spite of all opposition. Just as the only readable books in Oxford which can, with any degree of truth, be said to be real are humorous, *Zuleika Dobson* and *Verdant Green*, so the only book on public-school life which rings absolutely true is *The Lancaster Tradition*, which is almost farcical in its humour. Mr. Bradby knows his colleagues in and out, and knows them all the better from being able to laugh at and sympathize with them at the same time.

There are features in our life at school which, through fear of Mrs. Grundy, can never be printed, and yet if they are wholly ignored, no school story can possibly be complete. The only thing we can do is to lament that Bernard Shaw, H. G. Wells, and Arnold Bennett were not all educated at Eton. What revelations we should then have glutted ourselves with, what a true picture of school life we should then be permitted to enjoy! But if this trio had been at Eton the probability is that they would never have written a word, for no Society of Freemasons was ever so silent about its inner workings as the public-school man is about the esoterics of his House.

SAFE NOVELS.

The Anvil of Chance. By GERALD CHITTENDEN. (6s. Longmans.)

The hero is a schoolmaster, and the opening scene introduces us to Robert Brooke, a raw graduate, facing a class of seventy in open rebellion. He ends it by picking out the ringleader, a boy a foot taller than himself, and felling him with a facer. Chester is apparently modelled on an English public school; founded by Prof. Stokes, a martinet, who is succeeded by an incompetent slacker, and in the third generation comes the present Head, a man of the world, who holds that schoolmastering is like any other business, and highly applauds Brooke's procedure. We have next what is called a "tea-dinner" at the house of one of the married masters, where Brooke forms the one topic of conversation, and a *tête-à-tête* with Hood, an old stager, who expounds for him the true philosophy of an assistant master's life, the mean of golden mediocrity. We think we are going to learn what a public school in the States is like, but this is only a prelude, and gradually the school fades away in the distance and the hero passes on to Puerta Espanosa, catches the yellow fever, writes a brilliant magazine article on his adventures, and returns to school and to his true love, who has from the first discerned his real character. "Bob," she said, "you've tried to be extraordinary all your life. And you are a perfectly ordinary person, after all." In that, we are told, she did him rather less than justice. It may be so, but we must add that Mr. Chittenden has not done justice to his professed scheme of schoolmastering.

Dead Yesterday. By MAUD AGNES HAMILTON. (6s. Duckworth.)

This, if we mistake not, is a first novel, and the name of the author may, for all we know, be a pseudonym. At any rate, it is a remarkable book, original both in conception and style, and we may safely prophesy that, if it be her first work, it will not be

her last. We are introduced at starting to a fashionable set of London men and women who are grouped round the editor of the *New World*, a society weekly that takes the place once held by the *Saturday Review* in the reign of J. D. Cook. The dominant note of the company, expressed or suppressed, is *ennui*—boredom that some accept and others kick against—and in which the editor, Nigel Strode, who has himself no convictions or sentiments, is involved and suffers shipwreck. Suddenly on this *blasé* world there comes as a bolt from the blue the news of War. It severs the sheep from the goats and to all it comes as a relief from "the impracticable hours." We should look askance at any serious novel that took for its theme the War that is raging. It must needs lack the true perspective of history, and were it faithful to facts could hardly fail to degenerate into a *roman à clef*. Here, however, the War serves only as a background, or rather as a touchstone of character. There is a vivid description of the August Bank Holiday in London and the scene in Parliament Square when Sir Edward Grey made his historic speech. We have news from the front and learn how it affects the writers of leaders, the jingoes, and the pacifists, but of V.C.'s and Iron Crosses, of strategy and tactics, there is not a word. Love is lord of all, and we follow from beginning to end the love adventures of some six clearly marked, and at the same time typical, characters who are stamped in our memory as clearly as those of Jane Austen or George Eliot; and these reveal themselves more by what they say than by what we are told about them. There is, it is true, a certain monotony. All belong to the same social grade, and all are given more or less to conversing in epigrams and allusions. But the author has, as we have hinted, no less descriptive power, and reveals, though here only in sidelights, a real sympathy with toiling and suffering humanity. She is not the *homo unius libri*, and we look forward with keen interest to her next appearance.

Mr. Lyndon at Liberty. By VICTOR BRIDGES.
(1s. net. Mills & Boon.)

This is a first-rate detective story, crammed with adventures of all sorts by field and flood, but all of them interconnected and interwoven by a well concerted plot which holds us in suspense from the opening scene, when the convict Neil Lyndon, the inventor of the Lyndon-Marwood torpedo, escapes from Dartmouth, to the last page, where we leave the escaped murderer metamorphosed into a patriot hero feasting with his bosom friend and the rescued maiden in the Café Royal, after having been hailed by the Secretary for Foreign Affairs as the saviour of his country. We must accept a few extravagances at starting. For instance, the villain of the piece, by a slight surgical operation (the injection of paraffin wax under the skin), gives Lyndon an aquiline nose, and, by an application of the X-rays, a high forehead, and so makes him unrecognizable by all save, of course, the detective. There is, too, a second girl in the plot, the daughter of the second villain, who falls madly in love with him without apparent rime or reason, except that she is wanted to facilitate the escape and as a set-off to the heroine's superior virtues. We shall not spoil the story by further revealing the plot or telling the secret of the famous powder, twenty times as strong as dynamite, a flash of which blows up half an island in the Thames, and would have blown up London had the Germans succeeded in getting hold of the secret. It is just the book to while away an idle summer afternoon.

The Longest Way Round. By D. BROADWAY.
(6s. Allen & Unwin.)

You must not suppose that Letty Urquhart, English governess to a Boer family several years before the South African War, is a grasping shameless hussy because she proposes marriage to an unknown young settler as the necessary step to securing a legacy. No; she is the favourite charming English girl, slim, lithe, intelligent, capable, and of a highly disinterested nature. Of the very original bargain she drives with the penniless settler, persuaded to receive half the legacy in return for giving her his name and leaving her for ever in peace, of the adventures of both apart, and of their final reunion without the former baleful conditions, this story will tell you, in the longest way round certainly, but with spirit and invention. There are some excellent pictures of the veldt and some good character studies. It is an ingenious plot, which should surely adapt well for the stage.

Twilight in Italy. By D. H. LAWRENCE. (6s. Duckworth.)

It has been Mr. Lawrence's happy fate not to leave his readers indifferent. And the same fate should attend him in this latest volume of Italian studies. They may stimulate to pleasure or irritation, but stimulate they certainly will. It is an intensely subjective book; all the landscape, all the characters, are focused in one impression—Mr. Lawrence's impression of the Italian peasant character, in twilight between the great inhuman Not-self of the

industrial north and the sensual self of the south. Perhaps he insists on his theme rather too defiantly; certainly he often rubs the bloom off an idea by too constant iteration, but his little character studies are full of admirable perception, intuition, and sympathy, a most original blend of sincere and sensitive observation and philosophic reflection. The first study, *The Crucifix*, a study of the Bavarian highlands, is only loosely attached to those which follow, but is a good prelude to them. In the Bavarian peasant Mr. Lawrence finds one element only of his Italian twilight, and therefore a more unified person. "It is a race that moves on the poles of mystic sensual delight. Every gesture is a gesture from the blood, every expression is a symbolic utterance. For learning there is sensuous experience, for thought there is myth and drama and dancing and singing. Everything is of the blood, of the senses. There is no mind. The mind is a suffusion of physical heat—it is not separated, it is kept submerged."

WOMEN AS FARMERS AND FARM LABOURERS.

A VERY remarkable movement is now proceeding—educated women are being summoned in thousands to help to prevent land from going out of cultivation, to save the harvest (fruit and cereals), to tend cattle, and to perform a great deal of work that has hitherto been done by men. It appears that, since the War began, 300,000 agriculturists have joined the colours; their places need to be taken by some 400,000 women. For once education has commended itself to the authorities, for it is found that educated women

learn what is required in a quarter of the time needed by untrained brains; they can act as forewomen and in organizing the female labour to be found in agricultural districts; their work is an example to that sort of fine-ladyism which prefers strumming the piano or fancy-work to the more desirable products of the garden and dairy. Farmers' daughters of this kind need an example, and with them it is immensely effective to learn that Lady Irene Denison is a crack hand with the plough and the drill; the Hon. Mrs. Sclater-Booth (daughter of Lord Basing) works a harrow as well as any man; six hundred of the students of London University have offered their services to farmers during the holidays; Girton College, during the Easter holidays, was a training centre for many girls in agricultural work; Girton students are themselves engaging in gangs of ten or twelve to farmers who need immediate help. There has never been such a response to the cry of "Back to the Land."

There is never a movement of this kind begun but what some disagreeably well informed person tells us there is nothing new under the sun, and that there are tens of thousands of women engaged in agriculture even in England. Of course, we knew that in matriarchal days woman worked very hard in the fields, and no man was found to grudge her the job. There was no pay in it in these good old times. But, all the same, it is disconcerting to learn in Mrs. Roland Wilkins's *Work of Educated Women in Horticulture and Agriculture*, that the census of 1911 showed 94,000 women were then employed in agriculture, 20,000 being classed as farmers and graziers, and 2,449 as market gardeners. Almost every county seems now to have an organization to deal with the agricultural difficulty, and a ladies' committee is generally formed to find women workers and assist in obtaining suitable accommodation—a task by no means easy, as the housing of agricultural labourers in Britain has long been scandalous. County Councils are extending, in many cases beginning, courses of training for women. Thus Beds has an eight weeks' course; for the first four weeks the Council pays a farmer 10s. per week per girl for him to teach the work to the new pupil; for the next four weeks the pupil receives 15s. weekly from the farmer and finds herself. In some districts there has been difficulty in persuading farmers, who are usually conservative, not to say prejudiced, to accept the women's services; but very few have regretted doing so, and 75 per cent. of those who have tried women's work are favourable. Very few people know what women can do, and perhaps women have surprised themselves by their achievements under stress of compulsion. Thus the Glasgow tramway manager had to choose between reducing the tram service, which carries thousands of munition workers to and from the factories, and employing women as drivers. He chose the latter course, selected 100 out of over 1,200 women conductors, and trained them. Their coolness and confidence excited the admiration of old hands; they try no dodges of their own, obey the rules, and have fewer accidents than men drivers.

Farmers have been almost struck silly to see that women can make straighter furrows than men, and that this sort of work improves their health. Lord Selborne, late President of the Board of Agriculture, said that, of course, he would not expect women to dig, delve, plough, spread manure; but hardly had he spoken the words when he was informed that women are doing these very things all over the country. His lordship was not particularly happy in his Ipswich speech when he said he had no wish that women should compete with men. Men compete with women in dress-making, millinery, cookery, laundry work, in the selling of chiffons, hosiery, gloves. Why should women endure it in silence and not take up agriculture? There are men who seem to think that women have no right to live their lives in the way that best suits them; others have a strong sentiment that all well paid work should be reserved for men, all ill paid work should be left to women.

Mr. Cecil Harmsworth, M.P., one of the Secretaries of the Board of Agriculture, and Chairman of Committee, had

to deal with the fact that too few women are offering themselves for the work. "Tell the farmers," said he, "to offer good pay and good conditions; then women's labour will flow in steadily."

Exactly. Women will thus not only serve themselves, but their country and the cause of the agricultural labourer. Thousands are wanted, and perhaps teachers all over the country may assist in this work by laying the matter before junior teachers, assisting to find accommodation, making known the farmers' needs to parents, perhaps impressing gangs of old girls.

A London dairy, so late as June 24, excusing its enhanced price of 6d. per quart for milk, has published that 100,000 cows have had to be slaughtered in Britain because of dear fodder, lack of milkers and cattlemen. The example of France in agriculture has been admirable; many of the farming operations are carried on by women to an extent which we hardly realize in this country. One Frenchwoman, who had never touched a plough until the present War, made her brother give her two days' instruction before he joined the Army. She ploughed and sowed seventy acres without assistance.

C. S. BREMNER.

TEACHING THE DUMB TO SPEAK.

By CLOUDESLEY BRERETON.

NOT a few of our brave soldiers have come back from the front "concussed," having lost alike their sense of hearing and powers of speech as the result of some frightful explosion which has shattered their nerves, both physically and morally. Hearing is generally the first to return, and sooner or later many recover their speech as well. I have been tempted to set down the partial success that attended an attempt to restore his talking powers to one of these victims, because it was made on lines which, as far as one can gather, have not, in some cases at least, been sufficiently resorted to. When I first met A. B. he had been in several hospitals for over two months. Various attempts had been made to induce him (to use a mild expression) to speak by hitting him over the small of the back and other rough and tumble experiments. They had been apparently quite unsuccessful. On the other hand, he had recovered his hearing and general faculties. This was certainly an improvement, as when he was first dug out from under the debris of an exploded mine he was not only dumb and deaf, but also "silly." His general health had likewise improved, he was also having massage of his throat and back, and the use of the electric battery had revealed a large area of more or less marked insensibility in the region of his back. His only means of communication were signs and writing down his ideas; otherwise he was quite cut off from the outside world.

The first thing to do was to see if he could make any sort of sound at all. Investigations showed that the only sounds he could produce were whistling and the hissing sound one makes when one wishes to drive away a cat or some other animal. To attempt to utilize the whistling for speech was useless, as it brings into play only the lips. But it struck me if he could make the sound *sh* he could possibly be induced to pronounce words beginning with that sibilant, and so be gradually led on to others. He had frequently made efforts to speak; in fact, so great had been his efforts that often the perspiration stood on his forehead. Yet no sound passed his lips. The first thing to do was to impress on him, therefore, not to worry, but to take plenty of time and only try to speak in a whisper, while taking care to speak to him in a whisper oneself. The plan at length succeeded, and the very faintest sound of the word "ship"

came from him. Emboldened by this success one tried him with another word beginning with *h* only and similar in sound—namely, "hip." This he also accomplished after many trials, and the lesson closed for the day.

The plan of campaign for the next day was to speak to him in a whisper, and tell him not to bother about trying to speak aloud nor worry about how low the sound was. Above all, it was impressed upon him not to try to hurry. The attempt to reply immediately had no doubt merely paralysed his efforts. These preliminaries agreed upon, we started to pronounce successfully all sorts of words (monosyllables, of course) beginning with *sh*—i.e. "ship, shop, shape, shall, shell," &c. This showed he could pronounce other consonants. But when one tried to make him pronounce them at the beginning of words he entirely failed. I was nonplussed for the moment, but finally hit on the device of making him pass from words of one syllable to those of two with the interior consonant the same—i.e. from "skip" to "skipper," and then getting him to pronounce "pet" alone. This after some efforts he succeeded in doing, and we thus isolated *p*.

This bridging method proved a veritable "open sesame." Thus "shall" led to "shallow, low"; "shear" to "shearing, ring," &c. Then together we rang the changes on the vowels in words like "shoot, shut, shot." Next we tried successfully the consonants in "ship, hip, lip." Then we tackled a short phrase, "I can't say it," but he broke down at the word "can't." The phrase, too, was beyond him, but by taking "shock, shocking, king," we reached "kan" and so to "can't" by another route. Thanks to these "bridging" consonants in such words as "shipper" and "shallow," we gradually recovered all the consonantal sounds and all the vowels as well. But everything was given in a whisper, and such sounds as have voice in them, as *m* and *z*, he could not reproduce alone. It was clear we must try and get his larynx to vibrate, and one tried vainly to get him to sing or groan or make any sound with his throat. The lesson ended by dictating to him the words already used which he was to practise by himself with a view of augmenting his output of breath and resonance.

The third lesson began by making him breathe before the pronunciation of each sound. This was a success and led to a suggestion for practising deep breathing. Next I asked him to try to say the sentence, "I can talk in a whisper." He couldn't. But we got round the difficulty by practising the sentence word by word, and so gradually he was able to say it. Other phrases were also learnt, and he thus passed on to the "complete sentence" stage. An attempt to get his larynx to move by inducing him to imitate me in groaning as if he was suffering from a violent colic was not a success. Finding he had been an actor I suggested he should try to recite some emotional passage he knew, but this was beyond him. I also tried to find out his favourite "swear" words, which represent the quintessence of certain emotions, but again I failed. I left him with the counsel to go over the phrases we had practised and written down.

On arriving next day I was delighted to hear he had said "yes" to someone in the kitchen. Hitherto his conversation had been strictly confined to myself. After going over the list of words and phrases with him I tried to make him move his larynx by getting him to run a few yards and then groan with the efforts he made when spurring at the finish, but the result was a failure. He could only pant. Suddenly he said, in answer to a question, "I don't know." This was the first sentence of his own that he volunteered. Going indoors I read to him a paragraph from the *Times* word by word, he repeating it after me. Then I tried two words at the time, then whole phrases, he again repeating. Then he tried alone, first word by word, then two words at a time, then by phrases. As a prescription I left him to read over the passage by himself, in order to increase the volume of sound and also to read other passages to himself aloud for the same reason. I also gave him certain more or less harmless "swear words" to practise on, such as "you bleeder, the devil," &c., getting him to imagine he was hav-

ing a row with someone in order to stimulate his emotions. He also promised to try to recall and recite to me a piece of Kipling's.

The fourth lesson began with the usual recapitulation of words and phrases, with an exercise in deep breathing. Next he repeated to me the poem of Kipling which it had taken him two hours by himself to recover—a good indication of his persistence powers. The next day was taken up in getting greater audibility. The "swear" words were a great success, some being audible at ten paces. As he showed signs of nervous strain we had a rest for two days. At our next meeting I found he had talked in the interim to lots of people; his voice was stronger, though still a whisper, and his fluency much greater. I could hear single words at ten paces and the passage he read at six. His breathing was stronger and he could talk freely to me about himself and his life. After one more day's interval he had a final lesson. The recitation was audible at ten paces. He was now conversing freely with everyone in the house, and only complained that, when he talked in an audible whisper, it was like the sound of a roaring wind in his head. Once in the recitation he got some phlegm in his throat and slightly vocalized a word, but otherwise he could not get out of a whisper.

So far neither breathing exercises nor attempts to groan nor gargling had any effect, but experts have assured me that he is bound sooner or later to recover his full power of speech, and that some happy accident will probably bring it about, as the impediment is purely functional. Meanwhile he can talk with everybody and, after feeling walled up for two months in a sort of living tomb, he is certainly decidedly happier. The whole experiment, for what it is worth, seems to me to prove one thing—that, if anyone like myself with a general knowledge of phonetics can effect so much, the services of the skilled phonetician should be called in to supplement those of the professional nerve specialist.

CORRESPONDENCE.

JUNIOR O.T.C. AND CADET CORPS.

To the Editor of The Journal of Education.

DEAR SIR,—About two hundred secondary schools possess recognized Cadet Corps. Of these more than half have Officers' Training Corps, less than half Cadet Corps. In many instances it is pure chance which corps a school possesses, and it does not follow that all O.T.C.'s are able to turn out officers, while all Cadet Corps can produce only privates. It is on behalf of the latter that I am now pleading. Of course, some Junior O.T.C. are of a higher average age than Cadet Corps; they are also granted £1 for every efficient cadet over fifteen years of age. On the recommendation of their Commanding Officer, O.T.C. Cadets may be admitted to an Officer Cadet unit.

A few years ago it was not difficult to obtain recognition as an O.T.C.; now such recognition is unobtainable. Consequently there may be Cadet Corps more efficient than Junior O.T.C. recognized some years ago. In the case of Cadet Corps no grant is given by Government (except £5 which the T.F.A. annexes). Their officers provide their own outfit, defraying camp and other expenses out of their own pockets. Thus Cadet Corps labour under great difficulties, to which they have risen superior. From corps such as these boys have obtained commissions direct; they have produced serviceable material, quite equal to any demand made on it; many of the members could have passed Certificate A examination with ease. In some schools 25 per cent. or over of the Old Boys serving hold commissions. Certain schools have an Old Boys' Company attached to the Corps.

Under the new regulations School Cadet Corps are not given the privilege of recommending eligible candidates of over eighteen for any Officer Cadet unit. Though their cadets may have had years of training and experience of several camps, they must go into the ranks like the most inexperienced slacker. Can it be expected that the labour and money privately expended on School Cadet Corps will be continued when the members of the corps are treated with less recognition than conscientious objectors, who have a special corps to themselves?—Yours truly,

Acton County School.

USE

The British Made and Owned

Odourless, or Powerful Germicidal

FLORIGENE

(A Regd. Name suggested by FLOOR-HYGIENE)

Very **EARLY** in the **SUMMER VACATION**
for best results.

"Florigene" has been successfully and continuously used for many years on Wood, Concrete, and Stone floors of every description, also on Linoleum and Cork Matting in Government and Municipal Buildings, and in all kinds of Schools, &c.

"Florigene" costs little, is easily applied,
and saves time and labour.

It is **IMPORTANT TO NOTE** that

ONE APPLICATION of "Florigene" **ALLAYS** THE DUST and DIRT for **2 to 12 months**, according to traffic, not only during each sweeping (without Sprinkling of any kind) but also throughout all the intervening periods—which is of greater hygienic importance.

These sanitary, labour saving, and economic advantages are **NOT** attained by sweeping-powders or any other method.

Not sticky—the ordinary daily dry sweeping alone required — Scrubbing being optional.

"Florigene" is strongly recommended by Medical and other expert authorities.

A Head School Mistress writes:—

"I am glad to have the opportunity of recommending 'FLORIGENE.' We have used it regularly on both wood and linoleum, and found its effects most beneficial, both in laying the dust and preserving the surface. The linoleum scarcely shows wear after six years."

(Repeat orders since received.)

A Grammar School Head Master writes:—

"We have used your 'FLORIGENE' for several years in this School, and we have found it excellent in keeping down dust, which is now never to be seen anywhere. I believe the health of this School has been better since. The air is certainly more pleasant to breathe when movements are going on; there is also a great saving of labour in cleaning."

(Repeat orders since received.)

We are requested by Miss Hilda H. Pearson to publish the following appreciation of Dr. Geraldine Hodgson. The thirty-seven signatories are, all but eleven, graduates of a University, and include two head mistresses and twelve assistants:—

DR. GERALDINE HODGSON.

To the Editor of The Journal of Education.

SIR,—We, the undersigned thirty-seven past students of the Secondary Training Department, Bristol University, learn with consternation from a letter addressed by the Council to the Lecturer in Education, and printed in the *Bristol Times and Mirror* of July 3, that "Council does not propose to continue the department for the present." The opportunity of a year of preparation for our future career, of a year of more comprehensive study and more mature thought, was to us of such great and lasting benefit that we cannot but deplore the decision of the Council to withhold, even temporarily, a similar boon from others. More especially do we regret that this suspension involves the loss to the University of Dr. Geraldine Hodgson. We wish to place on record our sense of personal obligation to those who, in establishing the department, secured for us the advantage of intercourse with a scholar so distinguished, a friend so kind. Our debt to Dr. Hodgson is inestimable. Under her inspiring direction, our period of training became, to a degree unique in our experience, a time of mental quickening, of intellectual growth. Her wide knowledge, her sound judgment, her inflexible logic stimulated and energized us all. By example as by precept she taught us that nothing less than our best should be given to our pupils; she kindled in us something at least of her own courage and enthusiasm, humanized our sympathies, deepened our sense of responsibility, and raised our whole conception of the profession we were about to adopt.

The withdrawal of an influence so inspiring from a department—in our opinion so vital—must necessarily occasion us the deepest concern, and, while confident that Dr. Hodgson's brilliant gifts and command of expert knowledge will not be suffered to remain unutilized, but will continue to be exercised in the service of

education elsewhere, we wish to express to all who are interested in the welfare of Bristol University our keen disappointment that such exercise will henceforth be dissociated from the department which for fourteen years she has served with such unwearied devotion and such signal success. (Signatures affixed.)

"COLLECTED PAPERS ON ANALYTICAL PSYCHOLOGY."

To the Editor of The Journal of Education.

SIR,—May I note one or two matters in connexion with your interesting review of the above book in this month's Literary Supplement? I am extremely glad that you have drawn the attention of readers of *The Journal* to this wonderful and valuable volume by Dr. Jung and to the whole subject of the Freudian Psychology. It is, indeed, necessary that all educationists and thinkers should understand something of this new knowledge, and so far very little is known or, anyhow, *understood*. I note that your reviewer says: "There is no accredited and exhaustive treatment of it (i.e. psychoanalysis) in English." I think it is correct to say there is nothing "exhaustive," but certainly the survey given by Dr. Ernest Jones—the representative of Freudian doctrine in this country—in his book entitled "Papers on Psychoanalysis" (published in 1913 by Baillière, Tindall, & Cox) is perfectly "accredited," and I strongly advise everyone who wants a good general idea of the subject, presented in the most illuminating manner, to read this work. Among many other things the reader will find from it that the repressed desires of the human being which your reviewer stigmatizes as "usually so nasty," &c., can also be (and to quite as great an extent) idealistic, heroic, sublime. The whole matter of this new psychology is, as your reviewer well points out, a very complicated and big thing—knowledge which we cannot with impunity ignore.

In conclusion, may I say that there seems some omission in the announcement of Dr. Jung's volume at the head of the review? I understand that the *Collected Papers*, edited by Dr. Constance E. Long, have been mainly translated by Dr. M. D. Eder (one of the London psychoanalysts) and his wife.—Yours, &c.,
London, July 1916. B. L.

DUSMO
The Dustless Sweeping Powder

WHY NOT HAVE A CLEAN BILL OF HEALTH?

DUST in your SCHOOL is the CARRIER of **DISEASE** which may ATTACK those least able to resist it. You can REMOVE this **DANGER** by the use of DUSMO when sweeping.

A line of DUSMO laid down and swept before the broom will prevent dust rising, and so dry scour the floor as to render wet scrubbing an unnecessary expense, thus effecting

A GREAT ECONOMY IN YOUR CLEANING BILL.

Copy of Letter recently received from a well known College:—

"We have completed a period during which DUSMO has been severely tested, and I am now convinced of its efficacy, although I was at first sceptical as to its merits. You will need no better testimonial than the accompanying order for six more bags."

HINTS ON FRENCH SYNTAX.

By **FRANCIS STORR**, B.A. Camb., Officier d'Académie, Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission, University of London, &c., &c.

"A capital little book, which we have no hesitation in recommending to French students."—*The Pall Mall Gazette*.

"Mr. Storr's Hints are to the purpose. They are intended for schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing or speaking may use them with advantage."—*The Athenæum*.

Extract from Author's Preface.—At the request of several Masters and Mistresses, who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

London: **WILLIAM RICE, Junior**, 3 Broadway, Ludgate Hill, E.C.

DRUMMOND LATHES

Are right at the Front.
The important part played by Lathes in the present war cannot be exaggerated. A knowledge of Lathe Work means that at all times you are "Right There" and your services indispensable. DRUMMOND LATHES stand for the "HALL MARK" of Accuracy, and in the education of all a good knowledge of Lathes and their uses is invaluable. The $3\frac{1}{2}$ in. Lathe illustrated below is low in price, but capable of the highest class work.

As supplied to the British Admiralty.
Catalogues on application to **DRUMMOND BROS., Ltd.,** VIEW HILL, GUILDFORD.

THE ANNUAL

"DIRECTORY OF EDUCATIONAL ASSOCIATIONS"

will be found in the MARCH issue of the "THE JOURNAL OF EDUCATION," price sixpence, post free $7\frac{1}{2}$ d., a paper "indispensable to all school and college reading-rooms in these islands."—*Westminster Gazette*.

This "DIRECTORY," which extends over sixteen columns of the paper, has been corrected to date by responsible officials. It includes (a) number of members; (b) amount of annual subscription; (c) name of "organ"; (d) telegraphic address; (e) telephone number; (f) date and place of next annual meeting; (g) secretary's name and office address.

The *Journal of Education* for March contains as a Supplement *The Directory of Educational Associations*, which is now an annual publication. It is **one of the most useful returns published by any British educational journal.**

THE JOURNAL OF EDUCATION. A MONTHLY RECORD AND REVIEW.

SCALE OF CHARGES FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page	...£5 10 0	One Column [$\frac{1}{2}$ page]	£3 0 0
Half Column [$\frac{1}{2}$ page]	1 15 0	One-Eighth Page	... 0 17 6
Per Inch in Column, 8/-.			

SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—6d. per line; minimum charge, 5s.

Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d.; *prepaid rate.*

Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s.; each 8 words after, 6d.; *prepaid rate.*

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE, JUNIOR: Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." *Postage stamps can only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad, stating *full name and address* of the sender; and all Foreign Money Orders *must* be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON:

WILLIAM RICE, JUNIOR, 3 BROADWAY, LUDGATE HILL, E.C.

THE REFORM OF EDUCATION WITHOUT A ROYAL COMMISSION.

IT is with a sense of relief of something at last achieved that the *Times* reported Lord Crewe's announcement on the last day of June that the Government, in response to two memorials on the neglect of scientific teaching in our national system of education, had appointed a new Committee, composed mainly of scientific men, to deal with the question, and so assist the Prime Minister's Reconstruction Committee. It would work in close concert with the Minister of Education, and Lord Crewe himself would be chairman. We, too, welcome Lord Crewe's announcement, but for very different reasons from those of the *Times*. We have no expectation that the Committee will before the end of the year produce a "clear-cut scheme of reform," not even when goaded by the threat that unless this is forthcoming a storm of indignation will arise throughout the country, to be laid only by the immediate appointment of a Royal Commission.

We, too, as persistently as the *Times*, and for a far longer period, have urged the need of reform in our national system of education, but, in opposition to the *Times* and in common with the majority of teachers, we have maintained that this is not the time for a Royal Commission. Our educational mistakes, and still more our defects and shortcomings, are gross and palpable, and these have been brought home to us by the War, but it is not from ignorance that we are suffering. The essential facts are all before us, or can be easily ascertained by the Department. What we have hitherto lacked is a genuine faith in education, on the part not only of the Government but still more of the middle classes, as represented by the municipalities. As Mr. Henderson said, money is at the root of the matter. We have lacked the driving power, we will not put our hands in our

pockets. We believe, moreover, that we have laid a sound foundation, and that what is needed is superstructure, not revolution. Impartial critics tell us that the teaching of our primary schools is superior to that of Germany, but the elementary scholar in Germany has a year's more schooling than in England, and this year from thirteen to fourteen is all important. At the other end of the scale British Universities are still fewer in number than those of France or Germany, and the percentage of population frequenting them is comparatively less, but the number of Universities has during the last half-century automatically increased. In the case of Oxford and Cambridge, compulsory Greek is still a lion in the path, but the Universities themselves, at any rate the resident professors and teachers, have shown their readiness to reform, and there will be no difficulty in remodelling, wherever it is necessary, their constitution.

Between these two extremes lies a vast and ill-defined area, partly and imperfectly covered by what is known as secondary education. That there must be more and better organized secondary schools all are agreed; that there must be more provision for enabling the pick of our primary scholars to proceed to the University, that it must be made as easy for a boy of promise to specialize in science as it now is in classics or mathematics—all this is common ground, but two important points are commonly overlooked. First, that the remedy lies chiefly in the hands of the Board of Education. The Board now subsidize over eight hundred of our secondary schools, and can impose their own conditions as to curricula and entrance scholarships. Secondly, we must begin on the common basis of the humanities. The Eton boy, no less than the ploughboy, must begin by learning his mother tongue—to read and write and understand English, and this study must continue in the next stage, when specialization in science is begun. Lord Haldane, in his memorable speech in the House of Lords on July 12, spoke of secondary schools as the strongest point in German education and the weakest in our own, but he added that the grand defect of Germany is that it is wholly a class system—there is no provision for assisting the child of a German workman beyond the first rung of the educational ladder. He might have added that in England there is no such compelling power as in Germany—the menace of one or two years of barrack life for all who fail in the leaving examination. Very few, however, will wish to see this terror introduced in England.

We have touched merely the fringe of the subject, and said nothing of the training of teachers, of the co-ordination of examinations of technical institutions, and the encouragement of research. All we have attempted is to suggest how much, in the way of reorganization and development, the Board of Education can carry out without waiting for any Royal Commission. The Treasury is our true objective, and with such leaders as Lord Haldane, Mr. Henderson, and Dr. Sadler it will be carried by storm.

THE AUSTRALIAN SCHOOLGIRL.

By M. ATKINSON WILLIAMS, M.A. (London).

WE are hearing and seeing so much of our heroic Colonials in these days of stress and strain that some account of their sisters, by one who has had ample opportunity of knowing them, may be of interest.

The Australian schoolgirl, as I knew her *in statu pupillari* for some four and a half years, is, on the whole, a very charming and lovable young person, though she must not be judged by English standards. She lives in wider spaces, even when she is a city girl; she spends long holidays in the bush, passes all her available spare time in the open air, enjoys the sunshine even in the extreme summer heat, and lives under a

less conventional régime than would be possible in an old and largely urban country like England. All these things, and the different conditions which they imply, make for certain clearly marked characteristics in the rising generation. The most outstanding of these is a certain self-reliance and independence, a life more of action than of thought, for the Australian schoolgirl is not reflective, and has her own prejudices and traditions, to which she adheres as stoutly as the most conservative English public-school boy. But she knows how to take care of herself and, as a rule, how to act promptly and sensibly in any emergency. The large cities near the coast, such as the five capitals, have a number of very good boarding schools, and the proportion of boys and girls who attend them is surprising. Most of the pupils live in the country, many far away from even the small State schools dotted about the sparsely populated districts. The girls in such cases as these usually have a governess till they are twelve or thirteen years of age, and are then sent to a boarding school in a coastal town to continue their education. It is by no means always possible to provide an escort for such girls, and they travel alone many hundreds of miles by coach, train, and steamer, spending many days and even weeks on the journey. Such a girl would scorn the idea of being "put in charge of the guard," and generally has no difficulty in safely reaching her destination, having possibly changed from coach to train and from train to steamer, with a stay of some hours—sometimes nights—in a hotel.

One of my pupils, a girl of fifteen, whose home was some hundreds of miles away from the end of the railway line which ran from the coast to the interior of Queensland, may serve as a typical example. She left school for her mid-winter holiday in very wet weather; the monsoon had set in earlier than usual, and the so-called roads in the far west were impassable. On reaching the terminus of the railway, she found that the coach that would have gone within fifty miles of her home could not run. So she went to an inn in the little country town, stayed for a day or two, started with the coach, found the coach so "bogged" that she had to walk in the deep ruts of the track for miles, and, when the driver some days later gave up the attempt to go further, had to wait again at a wayside inn. The telephone and telegraph were out of order owing to the heavy rains, and she could not communicate with her parents. Finally, the parents sent an elder brother some eighty miles with a strong buggy, which managed to reach the township where the girl was "held up." She took a little over a fortnight to complete this journey, which normally took some four or five days, and her mother wrote to tell me that if she had sent her back to school the day she arrived, she would have been a week late. Her mother kept her a week and then sent her back to me, and she arrived some weeks after the beginning of the term, very calm and matter-of-fact over her adventures, and quite unconscious that she had done anything at all out of the common. Several girls in this same school came distances of 400, 800, and in one case 1,200 miles, without parent or other escort. Such girls do not go home for the short holidays, often only once a year for the long summer vacation.

When they have no friends living near, they are sent to the nearest seaside resort, often of a most primitive order, under the charge of a mistress. Small parties of girls enjoy this outing tremendously. Most of them are practised in household affairs; they look after their own rooms, set the tables, clear them and wash up, and do all the work of the house—even the cooking, when it is impossible, as is often the case, to get help. Of course, life is simpler than in a cold country. No fires are needed in Queensland save for cooking; one never sits indoors except in the rainy season, floors have no carpets, and the house and verandas need merely sweeping through. Picnics are frequent, and the girls cut their own sandwiches and pack the baskets. The boiling of the billy is an essential feature, and great care has to be taken, so parched and dry is everything, that a dangerous bush-fire is not started. These girls have a natural instinct for finding their way in the bush. I should

have been lost many a time if left to my own devices. On one occasion, while I rested below, they followed the rough, pebbly bed of a dried water-course for miles up hill and returned, having seen and avoided snakes, vipers, and a dead cow, which it was, of course, nobody's business to remove in these wild parts. They then tried to catch a native bear-cub, saw some wallabies, and brought back numerous botanical specimens. When we finally returned to the little town across the river in which the school was, they looked like a party of gipsies—ragged, torn, scratched, and smoke-begrimed. But a warm bath and change of dress soon put everything to rights.

It is strange to notice what hearty appetites most of these tropical schoolgirls have; they eat much more meat than English girls, and generally seem to require more solid food. My doctor friends warned me not to check their desire for meat, saying that the body needed to be sustained to fight against great heat just as against great cold, but I was never quite convinced.

One result of their open-air life is that Australian girls excel in sports. Tennis is played all the year round, even in the greatest heat, and is the favourite game. Netball is played about half the year, and in the summer the children are in and out of the water all day long. The girls swim extremely well, and inter-school contests in all the above games and sports are very keen.

Most Australian girls ride, and ride extremely well. The side-saddle is unknown, but a light habit over their ordinary dress makes an excellent rational costume. Day pupils often ride or drive long distances to school; they turn their horses out into the school paddock, and when school is over catch, saddle, and bridle the horse, or put it in the shafts of the buggy, and clatter off in happy parties of twos and threes. Most families who live in the towns have farms in the surrounding country, and week-ends or longer holidays are often spent there. Life in such cases is more or less of a picnic; the farm will have only a wooden frame house, with the minimum of furniture, and small camp beds placed on the verandas. All the work of the farm and house will be done by the boys and girls, and shooting parties are common, the girls often being very good shots, for the cockatoos play havoc with the crops and the farmers wage constant war on them. In many parts of the country pine-apple farms are very successful, and, as the work is not heavy, girls can give a helping hand.

It follows from all this that the Australian schoolgirl is not as "bookish" as her English cousin, and, with the exception of the precocious and often sadly over-worked "scholarship girls" from the State schools, the standard of attainment is not so high as in an English school of the same type. The Upper Sixth usually contains a few very clever scholarship girls, who will go on to the University, some for a medical course, some in preparation for teaching. The reputation of the school for scholastic attainment rests more on such girls than it should, while there is always a "sporting set" who maintain the school's reputation in athletics. This evil, not unknown in the Mother Country, will right itself in time.

Reading is at a discount. Who would read indoors at a temperature of anything between 80° and 110° Fahrenheit, with the river calling one to go boating, or the sea beguiling one to practise the latest acquired swimming stroke, or the bush tempting one to follow the merry laughing call of the beloved "Jack"? Just at the present stage of its development, Australia needs the girl who can "do things," and this lack of intellectual and literary effort has its compensations. The Australian girl prides herself on being able to "turn her hand to anything." She will wash and iron her white blouse in the morning, and put it on in the afternoon to play tennis. She will cook a meal for the unexpected traveller in a few minutes, mend the tank which shows signs of leaking, feed the horses and the live stock, and even use a hammer and nails effectively in an emergency. In fact, she has the defects of her qualities in this respect, and, like her brother, is too apt to put up with rough and ready arrange-

ments when there is no longer any need for them, on the plea that "it's good enough for us." The habit of sitting down to a meal without a tablecloth, allowing hundreds of empty tins to collect in the yard, leaving the gate hinge un-mended and the walls of the living-room merely boarded, is fatally easy in this hot climate, and one of the duties of the boarding schools is to encourage and develop a love of beauty, tidiness, order, and neatness for their own sake.

As in the United States, the Australian girl lives her own life, makes her own social engagements and her own friends, and there is a strange lack of parental control. This is to be deplored, not that harm comes to the girl, for she is generally quite capable of taking care of herself, and has an instinctive self-respect, but because it is always sad to see the bond between parent and child loosened, and the growing girl loses much of the wise and motherly counsel that she really needs. This independence is seen even in the nursery. A little girl in my kindergarten, for instance, in the morning circle talk, was much aggrieved because she had failed to persuade her mother to let her miss morning school to see the Labour Day procession. Another child commented on the absence, for the desired purpose, of a little boy of five, whereupon the first child remarked, with an absurdly comical air of worldly wisdom: "Oh yes, but Malcolm has such a very easy mother to manage." Another child was so disobedient and unruly at home that her mother, in despair, used to ring me up, with a request that I would tell her that she must obey her mother, and when, with difficulty, the child was coaxed and scolded into coming to the telephone to listen, there was usually no further difficulty, as my voice suggested, doubtless, the quiet, orderly controlled discipline of school.

Schoolgirls have usually far too much money to spend, and many are the devices they adopt to spend it. They are often permitted by their parents to buy what they need at one of the shops at which the parents have a running account, and much extravagance is the result in spite of the care of teachers. The system of unlimited credit is a bad one for adults; it is worse for children who live more in the present, and do not anticipate. Only the most stringent rules on the part of the school authorities can remedy the evil of extravagance, yet it is a mistake to forbid the older girls to shop except under strict surveillance, as they must learn how to order goods if they are going back to life on a far-away station, and they often do a surprising amount of shopping in town for their parents, who may not be able to get down to the coast. Then, too, many Australian girls marry quite young, and more in proportion marry than among English girls, as the sexes are more evenly distributed. The two years or so in a boarding school are often the prelude to an early marriage, and the sole opportunity of training the girl in careful, economical ways and discretion in shopping, particularly in the matter of dress.

Fortunes, though no longer made in millions, are still much more easily made and lost than in England; sheep farming and cattle rearing are still extremely profitable, and rises and falls of fortune among people of the uncultivated classes are quite common. The uncertainty of the seasons, the disastrous effects of a drought, or the failure of a mine to yield its usual output, with the sudden rise to wealth due to good rains or the successful working of a mine, make life in Australia much more of a gamble than people in England can realize. Partly as a consequence of this, partly from other causes, the Australian passion for gambling, betting, and games of chance is early developed, and raffling, lotteries, art unions, and other forms of gambling are common among quite young girls. One little boarder of mine received racing telegrams from her mother during examination week, while an older girl in the Sixth Form was taken by her mother to the local horse races as a birthday treat, with the express object of letting her make her first "book." She won half a sovereign and a pair of gloves, and came back to school triumphant.

Australian parents love their children, and are, generally speaking, anxious for their moral welfare, but there are

too many careless and indifferent parents, and the desire to give their children "a good time" is accountable for much of the lack of discipline in the home. In spite of some defects, the Australian schoolgirl is a healthy, wholesome type of girlhood, responsive and loyal, very warm-hearted and affectionate, and, above all, ready to make the best of things—to take life as it comes, and to face its trials courageously and cheerfully. She is a worthy sister of her indomitable and heroic brother.

JOTTINGS.

THE Governing body met at Eton College on July 17, and appointed the Rev. Cyril A. Alington to the Head Mastership, in succession to Dr. Lyttelton, whose resignation takes effect at Christmas. Mr. Alington is a son of the Rev. H. G. Alington, an ex-Inspector of Schools. He was educated at Marlborough, gained an open scholarship at Trinity College, Oxford, took Firsts in the two Classical Schools, and was elected Fellow of All Souls' in 1896. He served as an Assistant Master at Marlborough for three years and at Eton for nine years. Since 1908 he has held the Head Mastership of Shrewsbury, in succession to Mr. Moss. He married in 1904 a daughter of the late Lord Lyttelton and half-sister of Dr. Lyttelton. The candidates had been reduced to two, the second a member of the present Eton staff. Mr. Alington's success at Shrewsbury has been marked, and the school under him has grown both in numbers and in reputation. To the outside public he is known as a man of action more than as an authority on educational problems, and he cannot be judged by his rare and perfunctory publications. Parents have appreciated the lively interest he has shown in the individual welfare of pupils, in particular of the eighty odd boys in his own house. At the same meeting, Mr. F. A. Rawlins, Lower Master, was appointed Vice-Provost, in succession to Mr. F. Warre-Cornish, resigned. Mr. Rawlins was a Newcastle scholar of Eton, whence he passed to King's College, Cambridge, and was bracketed Senior Classic, and Chancellor's Medallist in 1874.

MR. CYRIL NORWOOD, Head Master of the Bristol Grammar School, has been elected to the Head Mastership of Marlborough College, in succession to the Rev. St. J. B. Wynne-Wilson. Mr. Norwood was educated at Merchant Taylors School and St. John's College, Oxford. He took a First in Classical Moderations and Greats, and the next year (1899) he was placed First in the Higher Civil Service Examination. After two years' service in the Admiralty he resigned, and served for two years as Sixth-form Master in the Leeds Grammar School, whence in 1906 he was elected to his present head mastership. It is remarkable that in a school founded originally for sons of the clergy, on the Council of which Church dignitaries form so important an element, a layman should, for the second time, have been chosen Head Master. It was a bold venture to throw up an assured position, with every prospect of advancement, for the uncertain chances of a public-school master. But Mr. Norwood found his true *métier*. By the new life he has put into an old school, he has endeared himself to the merchants of Bristol, and we wish him every success in the chair that has been graced by the name of Cotton, Bradley, Farrar, and Bell. We note that Mr. Norwood's name appears as taking part in the Conference of Modern Churchmen that meets at Oxford on August 21.

CAMBRIDGE LOCAL EXAMINATIONS.—The July Cambridge Local Examinations commenced on Monday, July 17, at 211 Centres in the United Kingdom and 10 Centres in the Colonies. The total number of candidates was 9,503. The Regulations for 1917 may be obtained from Mr. J. H. Flather, Syndicate Buildings, Cambridge.

ON July 22, at the Prince's Theatre, M. Jaques Dalcroze gave another of his lecture-demonstrations, the only London one of this season. This was probably the most impromptu demonstration M. Dalcroze has given in England, and it was specially interesting for that very reason. M. Dalcroze reached England only two days previously, so that there was little time for arrangement or practice. The children from the Home School, Highgate, did their

part well, if a little timidly. The four little Belgians came off with flying colours; they had more assurance than the English children and their movements were noticeably better. The students of the London school had an opportunity of showing their originality in the really beautiful plastic exercises of their own devising, which came at the end of the performance. M. Dalcroze's improvisation comes as an ever fresh delight and inspiration. It is as well to mention that the Dalcroze Society and the London Dalcroze School have no connexion other than that of furthering the same system.

ROLL OF HONOUR.—Captain W. J. Mason, Gloucestershire Regiment, Lecturer in Economics at Bristol University; Captain Freeman Atkey, Yorkshire Regiment, Assistant Master at Marlborough College; Captain B. S. Harvey, London Regiment, Assistant Master at St. Andrew's, Eastbourne; Captain H. M. Adcock, 10th Lancashire Fusiliers, Assistant Master at Bablake School, Coventry; Lieutenant R. O. Gilson, Suffolk Regiment, son of the Head Master of King Edward's High School, Birmingham; Lieutenant W. H. Milburn, Suffolk Regiment, Assistant Master at Framlingham College; Second Lieutenant J. M. Hunter, Wiltshire Regiment, Examiner at the Board of Education; Second Lieutenant F. W. Caton, R.E., Lecturer and Inspector under the Staffordshire Education Committee; Second Lieutenant A. G. Clarke, Rifle Brigade, Assistant Master at Royal Naval College, Osborne, and son of the Rev. A. E. Clarke, Head Master of Oxford Preparatory School; Captain R. S. Smylie, Royal Scots Fusiliers, Head Master of Sudbury Grammar School; Captain Guy Vickers, King's Royal Rifle Corps, Fellow and Lecturer of St. John's College, Oxford, Scholar of Winchester and New College, and Craven Fellow; Captain G. Watkin Smith, Rifle Brigade, Fellow and Tutor of New College School, Oxford, and University Lecturer in Zoology; Lieutenant E. E. Polack, Gloucester Regiment, son of the House Master of the Jewish House, Clifton; Second Lieutenant G. K. M. Butler, second son of the Master of Trinity College, Cambridge; Second Lieutenant A. T. Vardy, Warwickshire Regiment, Assistant Master at Highgate School, and son of the Rev. A. R. Vardy, late Head Master of King Edward's High School, Birmingham.

IN the announcement of open scholarships and exhibitions at Trinity College, Oxford (four in Classics and Modern History of £80 a year and one of £70), to be filled at the examination beginning on December 5, we note that there will be no limit of age for candidates who have been serving in any military capacity, provided they were under nineteen years of age on December 8, 1914, and in estimating their work the nature and length of such service will be taken into account.

THE University of Oxford has issued regulations and fees of School of Geography 1916-17. The school occupies the upper floor of the old Ashmolean building, but the office, library, and map collections at Acland House, 40 Broad Street. The Diploma in Geography (equivalent to two groups), or in Surveying (equivalent to one group) of the Final Pass School, is issued once a year on an examination held at end of summer term. The examination fee for diploma is £3. 10s., for certificate £1.

THE British Association meets this year at Newcastle-on-Tyne. The President for the year, Sir Arthur Evans, will deliver his address on September 8. The Chairman of the Education Section is the Rev. W. Temple, Rector of St. James's, Piccadilly, sometime Head Master of Repton.

AMONG the Civil List Pensions recently announced we note the names of Lady Murray (£170), a well deserved tribute to the first editor of the Oxford Dictionary; and Mr. Comyns Carr (£200), art critic and late editor of the *English Illustrated Magazine*.

AMONG the Birthday Honours of the year are the names of two famous publishers, both created baronets. Sir C. Arthur Pearson is the founder of *Pearson's Weekly*, and has lately distinguished himself by his untiring exertions on behalf of soldiers and sailors blinded in the War. Sir Algernon Stedman Methuen began his career as a preparatory-school master in the neighbourhood of Haslemere, and started the vast business, now a limited company, in 1889 under the name of Methuen. For the first year he continued his work as a schoolmaster and conducted the publishing business by means of a London office and clerks. At the last

General Election he contested unsuccessfully as a Liberal the Guildford Division of Surrey.

On July 9 *Lloyd's News* quoted as the longest telegram ever sent for sixpence the following, which won a prize in *The Journal of Education*, April 1888: "Administrator-General's counter-revolutionary intercommunications uncircumstantiated. Quartermaster-General's disproportionableness characteristically contradistinguished unconstitutionals' incomprehensibilities." The word "disproportionableness" was inadvertently omitted.

We regret to note the death of Miss Louisa Drewry, who has continued her teaching in English language and literature to the advanced age of eighty-one, and whose announcement of her professional work has appeared in *The Journal of Education* for over thirty-four years.

HARROW.—There was no Speech Day at Harrow this year. The Governors paid their annual statutory visit on June 29, when prizes were given before a select company consisting of the parents of prize winners.

REVIEWS AND MINOR NOTICES.

The National History of France: the Century of the Renaissance. By LOUIS BATIFFOL. Translated by ELSIE F. BUCKLEY. (7s. 6d. Heinemann.)

M. Batiffol's volume is the first instalment of a new History of France, *L'Histoire de France racontée à tous*, to be published under the editorship of M. Funck-Brentano, which is to present within the moderate compass of six volumes "a scientific exposition of the development of France from the period when it first became a homogeneous nation"—we quote from a delightful Introduction to the series by Mr. J. E. C. Bodley—down to its reconstruction by Napoleon. If the other volumes of the series are of equal merit with this, the whole will be a work which, while satisfying the demands of serious students by its scholarly and generally thoughtful presentment of French history, will appeal to all readers of cultivated taste by the brightness of its style. M. Batiffol's contribution is remarkable for its excellence in personal portraiture and in narrative. It contains a series of portraits, dealing alike with physical and moral characteristics, of a brilliancy noteworthy even in the work of a French historian, such, for example, as those of Francis I, Catherine de' Medici, Francis Duke of Guise, and Henry III. That of Francis I is perhaps too flattering, rather because it gives so much prominence to the showy side of his character than from any definite misrepresentation; the chivalrous monarch was intensely selfish; his honour was conventional and did not preclude faithlessness; he had no firmness of purpose; his alliance with the Turk was not merely shocking to the spirit of his age, it was a betrayal of the cause of western Europe, and the fate of Nice and its inhabitants who were sold into slavery casts a deep stain upon his memory. At the same time his encouragement of learned men, his two foundations for the promotion of learning, the royal library and the Collège de France, his love of stately architecture and of beauty and splendour of all kinds were, as we are reminded here, of the highest value in the development of French taste. In these things, however, he did not create, but rather took part in, a movement of which he is to be regarded only as a leader in virtue of the means at his disposal.

M. Batiffol, in opposition to the historians who describe Henry II as a mere shadow of a king, reflecting the will now of the Constable Montmorency and now of the Guises, maintains that he was a man of lucid intellect, independent judgment, and firm purpose. He shows, we think, good reason for his contention; but Henry's taciturn temperament, and his habit of taking counsel with only three or four exalted persons in whom he had full confidence, make it difficult to be sure how far his decisions were his own. In his domestic life he was guided by his elderly mistress, Diana of Poitiers, who

vaunted her power over him in the medal inscribed "Omnium victorem vici"; "owing to her influence," we are told, "Henry was an affectionate and considerate husband," which is certainly going far, and much farther, than his Queen, Catherine de' Medici, would have admitted, for she hated her brilliant rival. Of Catherine herself and her policy we have an altogether admirable appreciation, and it would be hard to find an account at once so interesting and so scholarly as that we have here of the spread of Protestantism, the attitude of its leaders towards the Crown and towards the adherents of the old faith, and the course of the wars of religion. The narrative of the events immediately preceding the massacre of St. Bartholomew makes it clear that the crime was unpremeditated: it was the effect of fear. Catherine and her counsellors, agitated by the threats of the Huguenots who had crowded to Paris, were reduced to a state of extreme terror by the story of a formidable conspiracy, and contemplated the assassination of a few of the Huguenot leaders; no precaution was taken to confine their crime to the limits which they would have set to it, and "anarchy reigned, bloodthirsty and destructive." Among the many picturesque bits of narrative in this volume none surpasses that which describes the planning and execution of the assassination of the Duke of Guise in the Château of Blois.

An important feature in M. Batiffol's book is his account of the French Renaissance in literature and art. He divides the movement into two periods at the middle of the century. During the first he considers it as tentative and empirical—a revolt from the medieval fetters which had hitherto prevented the free development of French genius. In literature it found exponents in Budé and Lefèvre of Etaples, Marot, Rabelais, and Margaret of Navarre; in architecture, a subject to which our author devotes many pages, it was expressed in the earlier steps in the abandonment of the fortress for the pleasant dwelling-house, and he points out how the fifteenth-century castle left its mark on such buildings as the châteaux of Blois of Louis XII, Amboise, and Chambord, essentially belonging to the French Gothic, though possibly influenced to some extent by early communication with Italy. In the second period Italian influence is known to have been strong. In literature it appears in classicism, and in the elaboration of French as a literary language with recognized rules of prosody and syntax. A fruitful harvest was gathered during the latter half of the century in the output of poets, the *Pléiade* and others, the translations of Amyot, the essays of Montaigne, and the works of publicists and many more. The French tradition in architecture was carried a stage further in buildings which combined with nobility elegance and a perfect harmony between details and the general lines of construction. Among these M. Batiffol awards the highest place to the Louvre, and notices with it the Château of Ancy-le-Franc, which he considers was probably also the work of Lescot; the Tuileries, built for Catherine de' Medici; and the exquisite Chenonceaux, built for Diana of Poitiers. The progress of the lesser arts is also sufficiently noted. In the course of a general review of French society during the century we have a pleasant picture of the life of those nobles who avoided the Court and dwelt among their own people, based on the *Diary* of the Sieur de Gouberville, lord of a village in the Cotentin, and of the character and condition of the commonalty.

The omission to record the beginnings of French colonization is to be regretted, for M. Batiffol's period saw the ill-fated Huguenot emigrations under Villegagnon to Rio Janeiro and under Ribault and Laudonnière to Florida. The early French adventures in northern America under Jacques Cartier and Champlain receive a bare notice, and may perhaps be left to be more worthily honoured by the author of the next volume. In two instances we venture to think M. Batiffol's treatment is somewhat superficial. The foreign policy of Henry VIII is more than once treated with undue and seemingly inconsiderate contempt, and the stress laid on the rivalry between Francis I and Charles V for the imperial crown, and the remark that it was the beginning of a "drama" disguise the fact that it began nothing new, except so far as the two monarchs were personally con-

cerned, and was simply an incident of no great consequence in the long struggle between France and Spain. M. Batiffol, however, does note that the conflict between Francis and Charles was inevitable, and rightly connects it with the struggle for Burgundy and other causes of quarrel in the past. In the case of a book so generally satisfactory, fault-finding is ungracious as well as difficult, and we prefer to end what we have to say about it by calling attention to its thorough explanation of the complicated system of judicial and fiscal administration in force under the later Valois Kings. To each of the chapters is appended an excellent bibliographical note citing sources and secondary authorities. The translator deserves a word of praise, for she has done her work well and has preserved much of the vivacity of M. Batiffol's writing.

The Foundations of Normal and Abnormal Psychology.

By BORIS SIDIS. (7s. 6d. net. Duckworth.)

It is natural in a book that professes to deal with the foundations of psychology to look for a definition that will fit in to all the legitimate applications of the science. Of the two great groups of psychologists—those who regard their science as concerned mainly with consciousness and those who limit it to an investigation of behaviour—this work leans to the consciousness school, which was to be expected from an author who is a practising physician. The actual definition he adopts runs: "Psychology is the science of psychic states, both as to content and form, regarded from an objective standpoint and brought in relation to the living corporeal individual." The adjective *psychic* here rather begs the question of definition, but the reader cannot complain that the volume, as a whole, does not go into sufficient detail in respect of fundamentals. Dr. Sidis has a decided bias towards the physical, and does his best to work up a rational connexion between the physical and the psychical. He is no more and no less successful than others in his attempt to bridge the gulf, but he is entitled to much credit for the sustained effort he makes to introduce symmetry and consistency in elaboration of his system. His parallelisms are not always very helpful, but they are usually interesting—as, for example, his comparison of the general plan of the structure of the percept with that of the cell. His physical bias, however, sometimes leads him to generalizations on the psychical side that most critics will regard as at least rash. What would Mr. Sturt, for example, say to the italicized generalization—*Not purpose, but chance, is at the heart of mental life*? Occasionally, too, he adopts a sort of passing descriptive definition that does not tend to clearness—as, for example, when he says "the self being understood by me as a *diffused consciousness*."

The core of the book is to be found in its author's theory of what he calls the "moment consciousness." By this he understands the synthetic unity of consciousness resulting from the grouping of a series of psychic events so that they exist no longer as a mere series, but as an element, in an organic whole of which they form an essential part. There is nothing strikingly new in this conception. The Hegelians have spent a good deal of time in working out the problem of the series existing in and for an organism in which it finds its meaning and the justification for its existence. But Dr. Sidis works out the idea on psychological rather than metaphysical lines, and one cannot avoid comparing the moment consciousness to similar conceptions such as *apperception masses* and *continua*. On certain points, however, Dr. Sidis elaborates the idea in such a way as to make it of greater practical value. This is particularly true of his development of the influence of the leading central experience in determining the functioning of "moments consciousness."

Again, in his hierarchy of the differing grades of organization of various types of moments consciousness, he provides a conception that is of great value to the practical teacher, though our author makes no claims to be of practical service to anyone, and indeed takes a good deal of trouble to damp any expectations of practical help from psychological investi-

gations. Readers of this journal will not be attracted to this book if they agree with its author's repudiation of "applied" psychology. But they may be reassured. No teacher can read the book without making applications for himself all the way along. It is true that the abnormal bulks more largely than would seem desirable for a reader whose life work is with normal healthy children. But our author is at pains to make us realize the falsehood of the statement that "we learn but little from the abnormal, for first of all comes the normal." He assures us that "the progress of science is not from the normal to the abnormal, but the very reverse, from the abnormal to the normal."

The proof reading has been careless. There is a list of errata at the beginning, but this might be greatly extended. The reader cannot fail to detect traces of haste. But the book is bright, vigorous, provocative, stimulating. It presents matters from a standpoint that is not familiar to the teacher, and for that reason, among others, it is to be recommended to the profession.

A Literary Middle English Reader. Edited by

A. S. COOK. (8s. 6d. net. Ginn.)

It is surprising to find what small acquaintance with our earlier literature exists among the cultivated reading classes; readers of Chaucer are not common: those of *Piers Plowman* and of *Beowulf* are rare; we do not remember meeting with anyone, not professionally connected with the study of literature, who had read anything else in Old or Middle English, except for purposes of examination. This is an unsatisfactory state of things in regard to a literature at least as rich in early monuments as that of any other modern language, and the cause of it probably lies in the fact that hitherto very little effort has been made to guide the general reader to our earlier writers. The editions in which they are accessible, with one or two exceptions, are expensive or intended only for students, while the books of selections have all been compiled exclusively for philological work. The general reader, in fact, has received little inducement to find out what our earlier literature has to offer him. In regard to Old English, it is true, his interests have not been entirely neglected. In 1902 Prof. Cook and Mr. Tinker of Yale University brought out a capital anthology of Old English poetry done into Modern English. This volume was followed in 1907 by an equally good selection of Old English prose; both of these deserve to be better known than they seem to be.

In *A Literary Middle English Reader*, Prof. Cook renders Middle English Literature a service as useful and important as he and Mr. Tinker have done to Old English, and has produced a most interesting anthology of English prose and poetry from 1100 to 1500 "not in the interest of grammar, or of dialectical study, or of lexicography, but of literary enjoyment and profit."

The first part of the General Introduction discusses briefly the main characteristics of medieval European Literature; the second gives a clear and compact sketch of the language during the period covered by the *Reader*; while in the third we have a good bibliography.

Every branch of literature—romances, tales, chronicles, travels, religious and didactic pieces, life and manners, translations, lyrics and ballads, plays—is represented, and the selections have been made with excellent taste and discrimination. The extracts are given in the original language, which linguistic difficulties made impossible in the case of the Old English volumes, and at the foot of each page adequate explanations are given for overcoming any obstacles the reader may encounter. Every extract is introduced by a short account of its author (when he is known), its literary qualities and the MS. or book in which it is found. All the chief Middle English works are represented, except *The Moral Ode*, for which, we think, place should have been found.

The book seems to us to fulfil admirably the purpose for which it was made, and the man is little to be envied who turns to it and comes away disappointed. As a textbook for students of language and literature it should be found highly

suitable for the wide range and great variety of its contents, though its value in this respect would be greatly increased by the addition of a scientific glossary. To the general reader and student alike the book can be unreservedly recommended.

Methods of Teaching in High Schools. By S. C. PARKER. (6s. net. Ginn.)

The number of books on education by American Professors is really becoming alarming, especially for the Americans themselves. For it means that the would-be teacher has to grapple with an ever increasing number of textbooks on education in order to pass his examinations successfully, and this is by no means a desirable state of affairs.

Prof. Parker's work is intended for students, and contains bibliographies at the end of each chapter which will certainly be useful, but would be far more useful if the lists had been greatly curtailed. It is undoubtedly excellent for the young teacher to study the work of educationists, but he needs guidance and selection, and to give twenty-three books referring to one subordinate subject does not seem very helpful!

The author has had great experience as a teacher and a lecturer, and has enjoyed the advantage of training under some of the most distinguished American educationists and psychologists. He therefore comes to his work with a full mind and a ripe judgement, and much that he has to say is particularly suggestive and practical. The arrangement of the volume is admirable, and the method adapted from Herbart of setting before the student "the field of ideas wherein their work is to be done," by printing at the beginning of each chapter the main points, has certainly much to recommend it. Of the treatment of the subject-matter it is difficult to speak with unqualified praise.

Although Prof. Parker expressly states in the first chapter that his object in writing the book is "to introduce students to a study of the principles which underlie instruction in high school subjects," he ranges over such a vast field of operations that in the mass of details which he presents, showing, it must be willingly admitted, a most minute and careful study of every aspect of American secondary education, these very principles are apt to be lost sight of. The volume is eminently practical, notably the chapter dealing with "Economy in classroom management," and much of it is based on sound psychology, but it somehow lacks that fine flavour of "humane learning" which makes the writings of the older educationists so profoundly interesting and so perennially valuable. Chapter XIII on "The Influence of Age on Learning" calls for particular notice, as Prof. Parker runs counter to the generally accepted view and maintains that in learning a foreign language the later years of school life are as effective as the earlier period. He upholds this view on the basis of experimental investigations, and, apart from this, would in any case defer the study of a foreign language "until the probabilities become large that the students who begin it will eventually use it as a practical tool." But is not this to lose sight of the value of the learning of a language as a means of training and of culture? Education in England has suffered in the past from an idealism which divorced the school from the world. In America there is a danger lest insistence on the practical value of education may lead teachers and professors to forget that man cannot live by bread alone. Yet, in spite of these strictures, Prof. Parker's volume is certainly to be recommended to young teachers, who will find it suggestive and helpful in the days of their apprenticeship to the most difficult and the most delicate of all the arts.

Essays for Boys and Girls: A First Guide toward the Study of the War. By STEPHEN PAGET. (5s. net. Macmillan.)

Published in November of last year, these essays would have been interesting and profitable reading for the boys and girls in their Christmas holidays. We wonder whether at that

time any of them would have wished that the author had suggested some thoughts on the Peace that is to follow after the War. To us his neglect of what is to come out of the War seems a little strange; it is disappointing that a book for the young should end with a chapter called "Looking back." Mr. Paget says to the boys and girls: "This is your War, it is for you, you will enter into all that it achieves and inherit all that it earns"; and he says this makes it necessary that they should study it. So it does, but that is not enough; they should be led still more to think of its *effects*—what possibilities there are of permanent peace, reconstruction, reform, both at home and on the Continent; what is meant when people say "war to end war," "war to put down militarism," &c., what we can do to maintain the ideals for which we are fighting. We should like Mr. Paget to have told his readers to study Lowes Dickinson's essay called "After the War." But let us be grateful for what Mr. Paget gives us; perhaps he will publish another volume to help young people to form reasoned views on these important matters. Mr. Paget tells us that a hundred years ago France was as overweening as Germany is now (page 55), that "ill-judged opinions" were entertained about the French (page 68), that Nelson said, "Hate every Frenchman as you would hate the devil" (page 59). "History repeats itself," he says, but he does not in this chapter draw any moral or suggest how such repetition and such ill-judged opinions can be guarded against.

In the chapter on Germany (especially page 124) we find the kind of suggestion we need. "To understand the German you must understand patriotism. We are ready enough to admire it in ourselves; we must be able to recognize it in the enemies of our country. As between persons, so between nations, nothing is gained by mere abuse and hatred, without insight or judgment." We should like more of these suggestive passages; they have far more value than the references to current events which inevitably lose point as soon as the moment is passed (e.g. page 159, with reference to the Dardanelles, "the final success has not yet come"). We could also well spare the fanciful note (page 160) on the "prophetic" nature of Shakespeare's plays, especially *Macbeth*.

It is pointed out (pages 28 f.) how many wastrels, idlers, and so on, have been made into men by the discipline of the army and navy; how many good soldiers find satisfaction in their duty; what a good effect the War is having on us as a nation. We feel that this is a dangerous line of thought: as if the unspeakable suffering of so many persons, both combatant and non-combatant, had to be the price of improvement in the rest of a nation. How splendid it would be if half the trouble and one-tenth of the money that is spent in war-time in making men fit for the trenches were expended in peace-time on making them really healthy and happy, so that they might *live* instead of dying for their country.

We hope that many boys and girls will read these essays; Mr. Paget writes simply and with feeling, avoiding prejudice and exaggeration (perhaps occasionally he is rather too colloquial: phrases like "full up" are beneath the dignity of his subject), and there is much to interest and enlighten, not only young people, but also their elders.

Hilaire Belloc. By C. CREIGHTON MANDELL and EDWARD SHANKS. With an Introduction by G. K. CHESTERTON. (2s. 6d. net. Methuen.)

Perhaps the best thing in this volume is the Introduction, both for what it says and what it omits to say. It goes back to the days when Mr. Chesterton and Mr. Belloc were both writing for the *Speaker*, and belonged to that isolated group nicknamed the "pro-Boers," and it contrasts the French sobriety of Belloc with the English extravagance of Cobbett, his great "forerunner" and the sworn foe of Whiggery. But it dismisses what Mr. Chesterton calls "the most real thing about Belloc, the religion," as a subject foreign to the purpose of the volume. As two of the chapters deal expressly with Belloc as an historian, this limitation appears to us fantastic. Nor have the authors strictly observed this reticence. Belloc is contrasted with Freeman and Froude.

Lingard is pronounced "one of the best historians of the English nation," and Lord Acton, who appears as "poor Acton, whose smug Whig bias is apparent to the stupidest," was nourished on Lutheran learning. The *Cambridge Modern History*, "sixteen volumes of unbelievable dimensions," has not one living character, or one paragraph, of exhilarating prose. This to show that Mr. Belloc's method is livelier than that of an historical cyclopædia.

The conclusion of the authors is that Mr. Belloc has already reached the heights for which society is striving, the fixed morality and dogmatic religion for which the world is in search. We read history differently; do not believe that every good and perfect thing comes from France, and hold that he who would read the signs of the times must look rather to America, which, in spite of all its abuses and shortcomings, is showing us that an unmixed democracy need not be an unmixed evil, and that Imperialism, of which we hear scarce a word in this volume, need not be the accursed thing against which Mr. Belloc raised his voice in his youth.

For Mr. Belloc as a war correspondent and an interpreter of military affairs to the public, we have the sincerest admiration, and still more for Mr. Belloc as the pilgrim, the lover of English scenery and English country life; yet we should hesitate to pronounce him "without hesitation the best writer of English prose since Dryden," or even as among writers for the press "unchallengeably supreme." We may doubt the ability of a writer to pronounce a judgment when he excuses himself for not saying more of style, in such sentences as "enough will be said up and down this book, and going about in the chapters of it, of that lucidity which is an author's peculiar merit," and "Mr. Belloc does not experience difficulties with his relative pronouns or bog himself in a mess of parentheses."

Modern Europe, 1789-1914. By SYDNEY HERBERT.
(2s. 6d. Macmillan.)

This is a little book which it is a pleasure to recommend to our readers. It is not a school book, though the highest forms in secondary schools might use it with advantage. It deserves, and we think will receive, a welcome from many whose engagements prevent them from studying larger books on the history of Europe since the outbreak of the French Revolution. They will find it recorded here, briefly indeed but, if the size of the volume is allowed for, with remarkable completeness. Mr. Herbert deals with it as a whole, noting the events which bear on the relations of States one towards another and showing how these events affected domestic development. He is not a mere chronicler of facts; he sees and points out their causes and effects. And his book is eminently readable, for though the period he covers is long compared with the number of his pages he is never overwhelmed by his subject; he avoids unnecessary details, and his style of writing is straightforward and easy. In his last two chapters on European diplomacy since the Treaty of Berlin 1878 to the present time, he does not attempt to give more than an outline of events, for, as he says in his preface, we must wait until we know more of the causes of the present War if we would understand the forces which during the last thirty-five years have contributed to mould the history of Europe.

On two points only we should like to see a slight emendation. The causes of the quarrel between Napoleon and Alexander of Russia in 1811 do not seem to us adequately stated, for though Mr. Herbert is, of course, right in attributing it chiefly to the attitude of Russia with respect to the Continental system, Napoleon's policy towards Poland and his annexation of the Duchy of Oldenburg should also have been mentioned. And in declaring that Denmark committed "a palpable breach of treaty rights" in 1863 by the law giving a common constitution to Denmark and Schleswig, he seems to confuse the Conventions of 1851-52 with the Treaty of London of May 8, 1852. While it is true that in 1863 Denmark set aside the constitutional decree which doubtless moved Austria and Prussia (though not the Bund)

to assent to the treaty, the breach of the treaty seems to us to lie on the other side. But the question of the Duchies is a difficult one and cannot be treated satisfactorily in a small space, and we would only warn our readers that the view of it which Mr. Herbert seems to take should not be accepted without a careful study of what has been written on the other side. Perhaps his use of "Frederick III" for Frederick VII of Denmark and of "Augustenberg" for Augustenburg may suggest that he has not made himself familiar with this question, though these slips may be only ordinary misprints, to which we are all liable.

Education, Science, and the Humanities. By A. W. PICKARD-CAMBRIDGE. (1s. net. Oxford: Blackwell.)

This criticism on the Manifesto of the "Committee on the Neglect of Science," is by a classical tutor of Balliol, who has for over twenty years taken a leading part in the work and deliberations of the Joint Examination Board. He is no extremist and agrees with the man of science that reforms are urgently needed, but he mentions that in higher education classics, *i.e.* ancient literature and history, must still retain its prerogative, while, by limiting the amount of composition required and curbing the extravagance of specialists, time may be found for insisting on a modicum of science and also of modern history from all pupils. The main lion in the path he finds in the Oxford and Cambridge scholarship system, apparently constructed on the assumption that the candidates are going to be specialists in a particular subject all their lives. He justly complains that the Committee has not attempted to produce any plan for the teaching of science to boys from the ages of eleven to nineteen and has made no allusion to the gross neglect of humane studies by mathematical and scientific specialists. We welcome such a temperate and reasonable contribution to the controversy, but we must point out that Mr. Pickard-Cambridge touches only the fringe of the question and says nothing of the mass of our secondary boys and girls who leave school at the age of sixteen or under.

Commencement Days. A Book for Graduates. By WASHINGTON GLADDEN. (5s. 6d. net. Macmillan.)

Dr. Gladden has known two generations of college and University graduates, has been in the habit of addressing them at Commencement and in Baccalaureate Sermons, and is able to say that the call to highest things is the one to which young people respond most readily. This book proves that they have not been flattered, but have heard some very plain speech. Its eleven chapters are all good, but perhaps the most arresting is the one on "Short Cuts." The man who makes haste to be rich is the man who does not tender to society a fair equivalent for what he receives—he has withheld the reward from labour one way or another. Those who value their soul will avoid short cuts. The closing words of the chapter are worth quoting: "To the world that gives you life, you owe love and service. Don't die in debt. Freely ye have received; freely give." In an earlier chapter Dr. Gladden quotes an amusing conversation he had with a farmer at the close of his own college course: "Goin' to school any more?" "Not just yet."—"What are you goin' to do now?" "I expect to work awhile."—"Work, eh? What are you goin' to work at?" "I think I shall teach school."—"Laws! Ye don't call that work, do ye?"

The Practical Conduct of Play. By HENRY S. CURTIS.
(Macmillan.)

This volume, part of "The Home and School Series," will be found of use by teachers and others whose work it is to organize play, and for whom a knowledge of what is being done in playgrounds, play centres, and the like is essential. As it is written by an American, and, we presume, primarily intended for Americans, many of the phenomena and characteristics to which Mr. Curtis refers will have little or no significance for the English reader, to whom, moreover, many of the ideas will seem odd and, in some instances, almost absurd. For the kindergarten teacher to be set down to make out an "authoritative curriculum of games for older children" from "Cat and Mouse," "Slap Jack," "Pull Away," &c., seems almost an unnecessary concession to the prevailing craze of the moment, though, no doubt, were the task approached in a serious and scientific spirit, it might yield interesting results. It is a question that we are fully entitled to raise whether all this theory and system of play do not destroy the most valuable factor in all play—namely, its spontaneity—and whether the gain in other directions is a sufficient compensation. This opens up a wide field for controversy, whereas this volume sets out to be nothing more than a practical handbook in which every conceivable game, form of recreation, play movement, and the

like are described in detail with a wealth of examples and illustrations.

Play in Education. By JOSEPH LEE. (Macmillan.)

This singularly interesting and valuable book, though largely concerned with American institutions and phenomena, ought to be in the hands of every teacher, parent, and educational official in this country, and recommended for careful and earnest study. For the writer, Mr. Joseph Lee has not only an original and sympathetic power of observation, but he possesses what is even more rare—the capacity to view and weigh and comprehend boyhood from its own centre. Consequently he avoids the pitfall that too often characterizes the pedagogical attitude of abstract theory and generalization uncorrected by experience, and, on the other hand, that of the parent or teacher who generalizes from limited personal experiences. Mr. Lee brings to his interesting work profound knowledge of boys, a sympathy of interpretation that almost amounts to genius, a breadth and clearness of vision that enable him to apprehend a truth so often forgotten by educationists—that boyhood is a period complete and purposed in itself, not merely a preparation for what follows—and, perhaps most fruitful of all, that Shakespearean quality of genial humour. Armed and endowed thus richly, Mr. Lee makes the greatest use of his knowledge and experience in interpreting and illumining the strange, partly complex, partly naive thoughts, instincts, sentiments, and activities of male and female, but more especially male, youth. His epigrams alone are worth study and reflection, and many of them are a mint of wisdom—as, for instance, "There is hardly anything the child hears or encounters outside of a school that does not interest him"; "Sir Lancelot rides forth every day upon our City streets, and next morning the judge says 'Twenty days.'"

"Handbooks on the Art of Teaching."—*On the Teaching of Latin.* By F. R. DALE. (1s. net. Constable.)

Mr. Dale writes from the standpoint of the practical teacher who believes in the value of Latin even if the methods used do not embody all the suggestions of the most advanced reformers. His little book will appeal to many who feel that they cannot adopt the Direct Method, and yet do not wish to be open to the reproaches of those critics who say that all, or nearly all, the time spent on Latin is wasted. Mr. Dale puts very sensibly the arguments for reform in pronunciation and other matters advocated by the Classical Association and the Association for the Reform of Latin Teaching. At the same time he recognizes the value of the ordinary construe and exercise in turning English into Latin. Teachers should find the book very useful; especially interesting are the last two chapters, the last dealing with "Later Stages." We could wish the book were written in better English, but its weakness in this respect is no doubt due to the circumstances in which it was composed (see preface).

Silva Latina: a Latin Reading Book. Chosen and arranged by J. D. DUFF. (2s. 6d. net. Cambridge University Press.)

This consists of extracts from the best known Latin authors, with very brief introductory headings and notes and a vocabulary. It would be suitable for use in third- and fourth-year Latin classes as an "extra" side by side with the books chosen for the year's work. The pieces could also be used for practice in unseen translation. They are chosen for their interest and excellence, and "no passage has been included that presents any serious difficulty in language or matter."

Rome and her Kings. By W. D. LOWE and C. E. FREEMAN. (1s. 6d. Clarendon Press.)

This is another of the "Oxford Elementary Readers" edited by Mr. Lowe. It contains useful, interesting reading matter based on Livy's *History*, with notes, vocabularies, and exercises for translation into Latin; also a map of Central Italy and a plan of Rome. It is one of a useful series—the exercises form a convenient introduction to syntax. Is there any authority for *ceter* (page 64) as the nominative singular of *ceteri*?

Verse Translations from Classical Authors. By C. E. F. STARKEY. New and Revised Edition, 1915. (Hove: Cambridge.)

It is twenty years since the first edition of these *Translations* by an Oxford master, made for the use of his more advanced pupils, was published, and they have since been emended, curtailed, and added to. He still considers Milton's version of the *Ode to Pyrrha* the nadir of translation, and has since come to look on Prof. Murray's Greek plays as the translator's unattainable ideal. To us "plain in thy neatness" seems nearer to Horace than Mr. Starkey's "Nature and art in you are well combined." Horace occupies half the volume, and, ingenious as are many of the translations, Mr. Starkey has yet to learn that metre matters. Thus, no version in the C.M. of the hymn book could hope to reproduce the first chorus of the *Oedipus Tyrannus*.

Nationality as a Factor in Modern History. By J. HOLLAND ROSE, Litt.D. (4s. 6d. Rivingtons.)

Everything that Dr. Holland Rose writes merits and will receive attention. The present volume consists of ten lectures, the first eight delivered at Cambridge in the Michaelmas term of 1915, and the remaining two given at the end of the year to the Historical Association in Birmingham and Bristol. Dr. Rose limits his subject and employs a terminology of his own, which his readers must accept before they can appreciate his argument. "Nationality" is an aspiration towards united national existence, and "Nationalism" is used for *corruptio optimi*, "the intolerant and aggressive instinct which has of late developed in Germany and the Balkan States." It is only since the French Revolution that Dr. Rose can discover any signs of Nationality as a conscious and definite movement. Nationality is a spiritual conception that cannot be exactly defined; it is "the apotheosis of family feeling . . . a union of hearts, once made, never unmade"; independent of race, of language, of State or form of government, and still more of religion. The treatment is strictly historical, and history is almost completely divorced from its sister subject, "Geography." There is a masterly sketch of Europe from the age of Dante and Chaucer, and full justice is done to Rousseau, to Schiller as the author of "Wilhelm Tell," and in particular to Mazzini as realizing, at least in conception, the ideal of nationality. We cannot help regretting the method that Dr. Rose has pursued, and regarding his demarcation of history before and after the French Revolution as forced and unnatural. Nationality may more justly be regarded as a development and enlargement of Patriotism. It may be traced to the city states of Greece who fought at Salamis and Marathon. We find it in what might pass for a glorification of the British Empire, Claudian's *Apostrophe to Rome* at the end of the fourth century, A.D., *Haec est in gremio victos quae sola recepit*.

Democracy and Military Service. An abbreviated translation of the *Armée Nouvelle* of JEAN JAURÈS. (1s. Simpkin, Marshall.)

To most English readers the name of Jaurès is known only as the great Socialist statesman assassinated by a fanatical patriot as a pro-German on the eve of the Great War. This book, planned in 1907 and first published at the end of 1910, gives a broader and truer view of the Democrat, and we are grateful to the editor for presenting it to us in an abridged form, partly a translation and partly a *précis*. Mr. G. G. Coulton first made his mark as the bold assailant of classical head masters in *Public Schools and Public Needs*, and here he vindicates his attitude as a lifelong Liberal in commending universal service, not necessarily on the French model, but on the lines of the Swiss army, which are in the main those proposed by Jaurès in his Army Reorganization Bill of 1910. We will quote Clause 5, the one that most concerns us. "Preparatory for boys from ten to twenty. This education will be more than a mere anticipation of military drill and manoeuvres. It will be, above all, an education in health and activity, by gymnastics, marchings, rhythmical drill, games of skill and swiftness, and musketry drill." To such a measure of conscription, *mutatis mutandis*, we should take no exception. The object that Jaurès proposed was to make France an armed nation keeping its goods in peace; a democracy, keeping in its own hands the conduct of foreign as well as of domestic affairs, armed strictly for defence and not, like Germany, to be trained for aggression and plunged into war at the bidding of a military despotism. How an international tribunal is to be set up that shall enforce arbitration before the declaration of war is declared is a question beyond our scope, and all we can here say is that Jaurès's views are well worth perpending, even if we differ from his conclusions.

Ancient Civilization: a Textbook for Secondary Schools.

By ROSCOE L. ASHLEY. (5s. Macmillan.)

This volume strikes us as rather too heavy for school use; it contains much information and is profusely illustrated. In the earlier part the treatment is slight. An account of the civilization of the whole of what is here called "The Near East" of the Egyptians, Assyrians, and Babylonians, with some notice of the Phoenicians, is attempted in two chapters, and the student may perhaps find them confusing and difficult to remember. We are not inclined to agree with Mr. Ashley's teaching as to the seven-storied temples in the "Tigris-Euphrates" valley, supported as it is by a small engraving of what seems to be a restoration of the tower in Sargon's palace at Khorsabad. This is, we believe, the only building of the kind of which enough remains to tell us what it was. It may very likely represent a class, but it appears to be a solid mass without any chamber, and can scarcely be taken as a typical Assyrian temple. In dealing with Greek and Roman civilization, Mr. Ashley gives little space to Greek art and Latin literature. We are told that Greek temples resembled those of the Egyptians in that they are surrounded with columns; but an

Egyptian temple is not so surrounded—its exterior is bare, its columns are all inside. He ascribes to Cleisthenes the admission of all adult male Athenians to full political rights. Cleisthenes recognized the exclusion from office of the poor, the fourth class in the Solonian constitution. The legal distinction between rich and poor was abolished by the legislation attributed to Aristides. It is a pity that writers of textbooks of this sort try to cover too much ground in their volumes; it leads them to feed their readers with such unsatisfying morsels as "*Horace* was famous for his *Odes* and other shorter poems." Shorter than what?

Our Eternity. By MAURICE MAETERLINCK. Translated by ALEXANDER TEIXEIRA DE MATTOS. (5s. net. Methuen.)

This is an extraordinarily fascinating volume containing a series of brilliantly written essays which discuss death and the possibility (in some way) of man's survival of it. The themes debated are such as the following:—"Our injustice to death," "annihilation," "the survival of our consciousness," "the theosophical hypothesis," "communications with the dead," "cross correspondence," "re-incarnation." The author airily dismisses the Christian view of the continuance of personality, and tentatively adopts "the hypothesis of a cosmic consciousness or of a modified consciousness," whatever that may mean. The volume is interesting and suggestive, and there is some good criticism, but there are gaps in the argument, and it cannot be regarded as a serious scientific treatise. But it contains some very fine writing, which is set forth in a perfectly admirable translation.

"Cambridge Bible."—*St. Mark.* Edited by the Rev. A. PLUMMER, M.A., D.D. (2s. net.)

Whatever comes from Dr. Plummer's pen is sure to be learned and thorough, and the present edition of *St. Mark* is no exception. It will be welcomed as a trustworthy and satisfactory edition for use in more advanced class teaching. There is a good introduction, and the text of the Authorized Version is furnished with full and lucid notes. Dr. Plummer does not believe in an *Ur-Marcus*, and thinks *St. Mark* may have seen *Q.*, though he doubts whether *Q.* was used in any direct way in the composition of the Gospel. He rightly regards the Gospel as having been written "in Rome and primarily for Roman readers," and "we may be sure that it was written, as we possess it, in Greek, and that our Gospel is not a translation from an Aramaic original. *St. Paul* wrote to Roman Christians in Greek; *Clement*, writing in the name of Roman Christians, wrote in Greek; and the early Roman Liturgy was in Greek." *St. Mark's* capacity for writing Greek is thus characterized: "He is like a man who can talk freely and with tolerable correctness in a foreign language, but cannot make a speech or write an essay in it." Some of the Jewish matters involved might have received a fuller treatment with advantage—e.g. the paschal character or otherwise of the Last Supper. There are some exceedingly useful maps.

St. Mark. Edited, with Introduction and Notes, by G. E. J. MILNER. (1s. net. Oxford University Press.)

This small volume contains the text of the Revised Version printed continuously, with a collection of brief notes at the end. There is an exceedingly short introduction of five pages and some appendixes (the Miracles and Parables recorded by *St. Mark*, the Herods, the Predictions of the Passion, the Pharisees, &c.). It will be found useful for elementary purposes.

A Short Ancient History. By JAMES H. BREASTED. (4s. 6d. Ginn.)

Too much has been attempted in this volume. We say this with reluctance, for the author has shown remarkable skill in compression; but, in spite of that and of several passages apparently intended to lighten the reader's task by jaunty or picturesque writing—not perhaps the best means to adopt for the purpose—we have found the book wearisome, and fear that the young people for whose use it is intended will agree with us. Nevertheless, it presents a gallant, and on the whole successful, attempt to sketch in broad outlines the history of the world from the earliest signs of man's existence, in the roughly shaped implements of the first Stone Age, to the establishment of Christianity as the religion of the Roman Empire. Political events are noticed only so far as they bear on the progress of civilization, on the conditions under which men lived, and on the part taken by each race or nation in handing on to another the knowledge and skill to which it had attained, to be modified, and in some cases increased, and to be transmitted to others. After notices of man in prehistoric ages it deals with the art and religion of Ancient Egypt, and should perhaps have pointed out how essentially barbaric Egyptian architecture is, and then it passes on to Western Asia, noting the invasion of the Babylonian plain by the non-Semitic Sumerians, their overthrow by the Semitic Akkadians, the long struggle between the two races, and, finally, the succession of the Chaldeans, who became the masters of Babylonia in the seventh

century B.C., and, under Nebuchadnezzar, absorbed and advanced upon Babylonian civilization. Next we come to the Medo-Persian Empire, the conquests of the Persians under Cyrus and Cambyses, and the splendours of the later kings, who, it is justly remarked here, so far from being barbarous Oriental tyrants, as might be gathered from Greek sources, were "fully conscious of their great mission as civilizing rulers." A short chapter on the civilization of the Hebrews, who owed much to the Canaanites, themselves learners from Egypt and from Babylon, is followed by an account of the peoples of the Mediterranean, and so we reach the history first of the Greeks and then of the Romans, written on the same plan as that pursued in the case of the early monarchies. The volume is munificently provided with maps and other illustrations, chiefly of buildings and sculptures. A few of these illustrations are coloured, and those of the Acropolis and the Parthenon suffer greatly from colouring. The little notes appended to the illustrations convey useful information, but it may be observed that Pola should have been described as in Istria, not in Dalmatia.

The Expansion of Russia. By FRANCIS HENRY SKRINE, F.R.Hist.S. Third Edition. (6s. Cambridge University Press.)

We are always glad to note the success of a thoroughly good book such as this certainly is. No doubt the present War has increased the demand for it, and we are glad that this should be so, for those who desire to know what Russia is to-day and what its future may well be after the clouds of war have been dispersed by victory cannot do better than read Mr. Skrine's account of its history during the last hundred years. It is accurate in details, broad in view, and eminently readable, for, in spite of the large amount of matter with which he deals, his narrative is never overcrowded, and he finds space here and there for vivid description. So far as we have tested it this volume is not, except for a sentence or two in the preface, different from the first edition.

Language Work in Elementary Schools. By M. A. LEIPER, of Western Kentucky State Normal School. (Ginn.)

There is nothing so important in a child's education as that he should speak and write his own language correctly, and speaking is more important than writing. This book, dealing with the problem of how the child who comes from an evil-speaking home is to be levelled up, will be useful to British, and more particularly to English, teachers, for the masses speak far worse English in England than in Scotland or Ireland. The thinking process is identified with language. As a rule, in teaching language, we err on the side of too much formality and too much written work; the oral side has been neglected. Our author insists that oral composition should be as deliberately planned and executed as written work. A language conscience must be aroused or implanted. The invariable rule is that the more interesting the subject, the better the composition.

Common Faults in Writing English. By H. ALEXANDER, M.A. (6d. Jack.)

This is a popular manual that pretends to touch only the fringe of the subject. It is apparently intended to serve the plain man who desires to learn the art of expressing his meaning correctly and forcibly in a letter to a newspaper, a paragraph, or a leading article, and the author's parting advice is to study the advertisement columns rather than the body of the paper. Numerous examples of faulty English are given, but the source of them is not indicated, and often they are so curtailed that, apart from the context, it is impossible to decide whether or not they are faulty. The main source, we are informed, is "an annual press publication," and the errors are, many of them, such as no educated man could commit; for instance, the confusion of "ascetic" and "aesthetic," of "physiology" and "psychology." The young author is advised to cultivate the "etomologizing" habit, but he is not advised to learn any other language than his own. The reader is invited to discover any errors in the book itself, and we will make a small contribution. Pope did not write, as the author corrects, "Drink deep or taste not of the Pierian spring." "It is wrong to say 'nobody but he was present.'" Are we, then, to correct Moore's "And all but he departed" and Hemans's "Whence all but he had fled"? "Firstly," "lastly" are unnecessary formatives; but, four pages later, we find: "Lastly the following pages may be instructive." "He acted differently to the previous occasion"; say *from*. The correction is as bad as the original. "They all enjoyed themselves in a way Lady C. would not have approved": the correction "approved of" is not an improvement. We have two pages on "participle wrongly attached or unattached," but on page 81 there is a glaring instance of a wrong attachment. The bibliography, some dozen volumes without prices or publishers, is not a serviceable addition.

A Cornish Haul. By BERNARD MOORE. (A. H. Stockwell.)

Another garland by the author of *Cornish Catches* that we reviewed last summer. These poems are no less redolent of the soil,

and reproduce the peculiar humour of the West Country, as Barnes does that of Norfolk or T. E. B. the atmosphere of Manxland. But over this volume is cast the shadow of the War, and the simple lyric, *Jim*, will live. We should like to quote *Salvage*, where the Methody and the Parson row off together in the life-boat; and *Wreck*, where Phil, the darling of the crew, goes "starin' mad" when his bride is taken from him; and *Peace*, where night thoughts correct the phantasms of the day; but for this we have not space, and extracts would be only like the bricks which the scholastic offers as specimens of a house.

Because I am a German. By H. FERNAU. Edited by T. W. ROLLESTON. (2s. 6d. net. Constable.)

"This remarkable book is prohibited in Germany," so we are informed on the cover; and Mr. Rolleston informs us further that even in Switzerland it may not be exposed for public sale. It is, in fact, an impartial review of *J'accuse*, and as proving that all Germans are not hypnotized or gagged it is remarkable. For the rest, it says what here we all say, or only a thought the weaker, and the translation leaves something to be desired. The German Government "creates the impression that it is nervous of a book." "Field-grey sentiments and field-grey science! The whole nation one mass of bronze." The notes of the editor on leading German publicists and politicians are a valuable addition, and give us facts that it is not easy elsewhere to discover.

Peter Pan and Wendy. By J. M. BARRIE. Illustrated by F. D. BEDFORD. Authorized School Edition. (1s. Henry Frowde and Hodder & Stoughton.)

Nothing could be more true than that *Peter Pan* will never grow old. This little book keeps very closely to the play. It is illustrated by F. D. Bedford's imaginative drawings. We fancy that for once the school children will not mind how often they read this book; it should go on the War economy book list.

Bacon's New Atlantis. Edited by ALFRED B. GOUGH. (1s. 6d. Clarendon Press.)

In the present edition obvious errors have been corrected and noted at the foot of the page, the obligations to Prof. Moore Smith's edition being duly acknowledged.

MESSRS. MURBY have added largely to their catalogue of slides originally prepared to illustrate H. G. Smith's *Minerals and the Microscope*, under the headings Igneous, Sedimentary, and Metamorphic Rocks. These now form a welcome illustration of geological formations. The price is 1s. 6d. a slide.

FRENCH AND GERMAN.

- (1) *French Composition for Students and Upper Forms.* By G. W. F. R. GOODRIDGE, B.A. (2s. 6d. Oxford University Press.)
- (2) *Passages for Translation into French and German.* Selected by G. G. NICHOLSON, B.A., B.C.L., and C. J. BRENNAN, M.A. (3s. 6d. Oxford University Press.)
- (3) *Passages for Translation into French.* Senior Course. By A. R. FLORIAN, M.A. (2s. Rivingtons.)
- (4) *Sainte-Beuve: Causeries du Lundi—Franklin et Chesterfield.* Edited by A. WILSON-GREEN, M.A. (Cambridge Modern French Series. Middle Group.)
- (5) *Chateaubriand: Le Journal d'un Emigré.* Annoté par A. S. TRÈVES; (6) *Töpffer: Trois Contes.* Annoté par MARC CEPPI. (Bell's Sixpenny French Texts.)
- (7) *Alfred de Musset: Deux Nouvelles.* Edited by F. VICTOR MASSARD. (1s. 6d. Rivingtons. Junior Series.)
- (8) *C'est la Guerre!* Six nouvelles par MARC CEPPI. (1s. net. Bell.)
- (9) *Brueys and Palaprat: Le Grondeur.* Edited by MARGUERITE D. M. GOLDSCHILD, B.A. (10d. Blackie's Little French Classics.)
- (10) *Lectures Historiques* (1610-1815). Editées par EMMA MOFFETT, M.A. (2s. 6d.; without Vocabulary, 2s. Harrap.)
- (11) *Petit Cours Préparatoire.* A two-term course in Phonetics. By L. H. ALTHAUS. (1s. 4d. Black.)
- (12) *Easy Lessons in German.* By J. BITHELL, M.A. (1s. Pitman.)
- (13) *German Reader for Beginners.* By MARTIN H. HAERTEL. (3s. Ginn.)
- (14) *Progressive German Idioms.* By S. TINDALL, M.A. (1s. 6d. net. Oxford University Press.)
- (15) *Erstes Deutsches Lesebuch.* Von MARTIN SCHMIDHOFFER. (2s. Heath.)

(1) Mr. Goodridge's method of teaching French prose is logical and convincing. Having made up his mind that "the only plan available was that of focusing everything on a single set of rules at a time," he set to work to arrange a dozen or more batches of syntax, explaining each rule in French. For each batch he then wrote some fifty short English sentences for oral translation, twenty longer sentences of the same type, and finally a number of proeses—five or six to each batch of syntax—specially arranged to ensure constant repetition of the rule he sought to teach. Mr. Goodridge is evidently a skilled craftsman. At the same time we must express a conviction that the subjects for free composition appended to each section should have been excluded. They are strangely out

of place in a work aiming at the teaching of French prose by the translation method.

(2) This volume contains some 350 pages of prose passages for translation into French and German, some of them of great length (three or four pages), nearly all demanding the highest standard of knowledge and taste. We cannot help thinking that some attempt should have been made to separate the selections for translation into French and into German, languages which differ more widely than Latin and Greek.

While (2) was suited only to University students, and advanced ones at that, (3) should meet the requirements of fifth and sixth form French masters seeking a prose book of graduated difficulty.

(4) The volumes in this Cambridge series are delightful to handle. Mr. Wilson-Green's method in this little work is to divide the text into four-page groups, and attach a number of oral questions and a prose to each group. The oral questions are well thought out on a systematic plan. The proeses, instead of being of the retranslation type, are selected, mostly from Chesterfield's or Franklin's own writings, for parallelism of subject rather than verbal similarity. In a single point one must confess a feeling of disappointment. Such a book affords an incomparable chance for a series of lessons, however short, on pure literature. We cannot hold a candle to the French in the teaching of this subject, for the reason that we begin too late. Will not Mr. Wilson-Green, in a future volume, outline the plan of half-a-dozen short literary lessons?

(5) and (6). The bulk of the space contained in each of these little 100-page volumes is devoted to the text. Vocabulary and notes, printed together, occupy only fifteen or sixteen pages. Destined for rapid reading in class, both tales are interesting, of no more than moderate difficulty, and possess the further merit of being unhackneyed.

(7) Truly the path of the learner is made easy nowadays! In a little pocket at the back of this edition of *Pierre et Camille* and *Croisilles* is found a second little stiff-bound book containing vocabulary, notes paraphrasing in French all difficult phrases, Direct Method and retranslation exercises; so that, in preparation, one has only to prop the text open and have both hands free to turn up words in the vocabulary and phrases in the notes. This novelty should appeal to the average boy.

(8) These six stories are the product of delicate wit and high spirits. They are, moreover, written by one who is a clever teacher and experienced publicist: who knows of what the middle school is capable, and what viands to set before it. The style is easy; the flow of idiom constant, yet unobtrusive; and the tales are really very funny. The pill of learning is, indeed, coated very thickly with sugar.

(9) This is a sound and adequate edition of a play collaborated in by Brueys, more celebrated as author of *L'Avocat Patelin*. The notes, *questionnaire*, and retranslation exercises are well thought out. It is right that so good a comedy should be read by English students, but one may express the pious hope that it will be used only at an advanced stage in the school curriculum; for to teach younger boys or girls a whole number of French phrases now obsolete is as bad a mistake as teaching a Frenchman English out of *Pepys' Diary*. Yet the error is made with astonishing frequency. And, indeed, in this particular book the questions to be asked and the sentences for retranslation are obviously not intended for very advanced students.

(10) The extracts in *Lectures Historiques* are chosen with skill; the connecting passages are packed with the information necessary for a proper understanding of each period between the days of Louis XIII and Napoleon. Many historians and diarists have lent their posthumous aid—Michelet, perhaps inevitably, more than most. It was a good idea to publish *Lectures Historiques* without, as well as with, vocabulary, for the book is well suited for rapid reading in middle forms. Possibly with this end in view, the compiler has wisely refrained from overloading it with notes. On the other hand, the *Lexique des noms propres* is choked with facts, which young readers would never assimilate, and might be omitted.

(11) French teachers with time at their disposal will find Miss Althaus' model course in phonetics a valuable aid to the teaching of pronunciation. The book has been made as attractive as the nature of the subject permits, and the name of the author spells care and enthusiasm.

(12) *Easy Lessons in German* is written primarily for the needs of commercial students. But this aspect of the language is not exaggerated. Mr. Bithell's style is entertaining; even chatty. He makes more interesting the task of learning a language by laying stress continually on the cousinship of English and German, and by touching on questions of philology. We do not always agree with his statements, as when he asserts that German spelling is phonetic. *Stein*, for example, does not represent *Shtein*, the almost universal pronunciation; nor does *Station* correctly symbolize *Stassion*.

Neither do we admit that "the vowel sound in *Buch* corresponds to that in *book*," except in northern English. Final *g* is not pronounced as *k* by the majority of Germans. The book is full of excellent features. The author very wisely, as we think, makes an early beginning with the teaching of verbs.

(13) One hears on all hands of the difficulty of finding for boys who have not long learned German a reading-book of progressive difficulty, provided with *Fragen* and retranslation exercises. This book of *Märchen* contains, in addition to the familiar Grimm and Andersen, tales by more modern writers, such as Baumbach, and is of the type indicated above. It is an excellent thing for beginners to learn plenty of French and German poetry. But one still hopes against hope that one day an editor will arise with ideas beyond *Heidenröslein*, *Der alte Barbarossa*, *Ich hatte einen Kameraden*, and *Ich weiss nicht, was soll es bedeuten*. This, however, is but a small and quite unimportant point. The book should find many teachers glad to use it.

(14) A very useful compilation of German everyday idioms and proverbs, which the pupil rarely acquires if he trusts to picking them up from his reader. There is a good index.

(15) A very attractive collection of prose and verse, with delightful little illustrations. It should be possible for a shrewd teacher using this book to get good results with quite young children. The selections are carefully graded, with short sentences and simple ideas. The first part is printed in Latin characters, the second in German. The author does not explain how beginners are to use the vocabulary, which is in German type.

MATHEMATICS.

Theory and Applications of Finite Groups. By Prof. MILLER (Illinois), Prof. BLICHFELDT (Stanford), Prof. DICKSON (Chicago). (17s. net. Chapman & Hall.)

In three parts, each written by a recognized authority in the special part he deals with. The first two chapters of Part I present the fundamental theorems on groups of substitutions necessary for Parts II and III, and the other chapters are devoted to the formal development of abstract theory. Part II gives a more comprehensive outline of the theory of linear groups than is contained in the present texts, and contains chapters presenting the author's own researches in a connected form. Part III contains the essential principles of Galois's theory of algebraic equations (with emphasis on the condition for solvability by radicals). The three parts form a unity, and suggestions are given for courses of reading.

Cambridge Mathematical Tracts.—No. 2: *Integration of Functions of a Single Variable.* Second Edition. By G. H. HARDY, M.A., F.R.S. (3s. net. Cambridge University Press.)

The chief alteration consists in the rewriting of the sections dealing with the theorem that if $\int y dx$ is an algebraic function of x , then it is a rational function of x and y . Abel's original proof, shown invalid by Mr. Littlewood, has been replaced by a new proof due to Mr. Norton.

Cambridge Tracts.—No. 18: *General Theory of Dirichlet's Series.* By G. H. HARDY and Dr. MARCEL RIESZ. (3s. 6d. net.)

This is of a much more advanced and special character than many of the tracts in this series. Publication has been delayed by the enforced withdrawal of Dr. Riesz's co-operation, and Mr. Hardy emphasizes the great value of his contributions. The detailed references and bibliography will be invaluable to others researching in this field.

Indian Mathematics. By G. R. KAYE. (Calcutta: Thacker, Spink, & Co.)

A very interesting little tract of great value to teachers who believe in humanizing the subject of mathematics by historical allusions. The labour involved in the compilation has evidently been lightened by the author's interest in his subject. Boys especially will be delighted with the humorous way in which old Hindu schoolmasters set their examination questions, and we are aware of no modern textbook that concludes with the sentence, "Thus ends the section of devilishly difficult problems."—(Brahmagupta, A.D. 598.)

Hancock's Applied Mechanics for Engineers. Revised and rewritten by Prof. M. C. RIGGS. (10s. 6d. net. Macmillan.)

In the original textbook (published 1909) the author wrote for engineers of good mathematical education, developing the subject on sound lines, but at the same time being especially careful that the applications were entirely practical. This point of view is still prominent. The most important change lies in the much wider use of graphical methods. There are comparatively few such books as this, which succeeds in being utilitarian but at the same time has a high educational value.

COLONIAL AND FOREIGN NOTES.

FRANCE.

Many of us set our backs up against vocationalism; then looked at it more closely and lowered them a little; the War, with its inevitable consequences, is making us all approve it, for the economic stress bears down all objections. In France, at present, it is the girls that are affected most by the new movement. An employment, fit and educative, is proposed for them in scientific laboratories. Dr. François Helme has pointed out that even before the War there was a scarcity of men assistants in such places, and that this scarcity was a principal cause of the technical and industrial superiority of Germany. He says, after having observed women at work during the War: "La femme, avec ses qualités de patience, d'endurance, d'assiduité à la tâche, sans en être distraite par l'alcool, le tabac et le reste, est le collaborateur scientifique rêvé." Accordingly he will organize training in chemistry, bacteriology, biology, pharmacy, medicine, and surgery, and subject to it fifty or sixty women of average education. He hopes that after the War the State will continue the work thus begun as a private enterprise. Again, the *baccalauréat* is in France the gateway to the liberal professions. M. Liard, Vice-recteur de l'Académie de Paris, has noticed how women are making ready to conquer many professions hitherto reserved for men. Last year the number of girls preparing for the *baccalauréat* at once doubled itself; this year at the University of Paris there are 50 French women in the Faculty of Law, 186 in the Faculty of Medicine, 18 in the Higher School of Pharmacy, 179 in the Faculty of the Sciences, and 196 in the Faculty of Letters. In the latter two groups the majority are preparing themselves for the *licence*, the degree which opens for men office in the secondary schools. In the lack of men teachers, they argue, women teachers will be in demand for the boys' *lycées* and *collèges*. In recent numbers of this journal we have told how the French girls are looking also to commerce and to the farm for apt vocations. There will be old prejudices and trade unionism to be overcome; but France will prosper in proportion to the goodwill with which she accepts these new-mustering recruits for the army of wage-earners. And in England the old order passes for women—and for men. Instead of for "the gentleman and scholar," we are beginning to ask for the "gentle tradesman," for a man economically place-filling as well as liberally trained, not excluding the scholar from the list of "tradesmen," or honourably wage-earning men; and for the "lady" we must substitute in the same spirit "the gentle tradeswoman."

A Ministerial Circular, dated the 15th of June, thanks the primary men and women teachers for their work during the War—in contributing money, in placing Government Bonds and the Loan of Victory, in re-educating the mutilated, in succouring prisoners, and in holding, despite the many claims on their time, the usual courses for adults. In recognition of their devotion and their efforts the Minister orders that this year, as last, the long holidays shall have for all schools the same duration—eight weeks. But the *garderies* for children must be kept open wherever it is necessary.

The June issue of that excellent quarterly, *L'Education* (VIII, 2), contains admirable articles on "Primat de la liberté dans l'éducation" and "Le sentiment de l'honneur chez les grands historiens du moyen âge." It also eulogizes, in a careful study, "L'échelle métrique de l'intelligence de Binet et Simon." The matter is too complex for us to examine in a paragraph. We observe, however, that an American writer (H. C. Stevens, in *The School Review*, XXIV, 6) expresses an opinion that the Yerkes point-scale is destined to supersede the Binet-Simon test. It is noteworthy that in the cases of backward children that he probes the results obtained by the two tests run closely parallel.

The *Revue Universitaire* (XXV, 6) describes the art of writing Latin verses as to-day over-much neglected, and quotes freely from a Latin poem on the War by M. F. Ferrère, of the Lycée d'Agen, whose manner reminds us of Lucan's. The German (*noxia semper bellua*), of course, gets a sound rhetorical flogging. His trenches (*firmum munimen fossae*) and barbed wire (*claustra spicati ferri*) are—wrongly, as we think—condemned; he becomes justly abhorrent when he *corruptit late putridis afflatibus auras*, lets off his noxious gases. The Zepelin (*disquirens facilem per vasta silentia praedam*) raises M. Ferrère to the highest flights of indignation. To judge from the specimens adduced, the poem is a scholarly exercise and good fulminating stuff.

BELGIUM.

It was, we think, in 1794 that French became the recognized language in Belgium for official and judicial purposes. The University of Ghent since its foundation in 1818 has been a French academy. Baron von Bissing proposed to make it Flemish with a stroke of his pen: but no Belgian professor would come to his aid. Even the Dutch professor, Logemian, refused a call. Of the two professors whom he has found one is from Luxembourg, the other a German. The Belgian professors had the choice between a Flemish chair in the transformed University and resignation. They resigned.

CANADA.

Ontario is holding its summer courses as usual, the Department of Education co-operating with the Agricultural College, Guelph, with the College of Art, Toronto, with the University of Toronto, and with the Department of Militia and Defence. Of especial interest are the Courses in Physical Culture. In connexion with them the Department of Education grants certificates—(1) in Elementary Physical Culture; (2) as Supervisors of Physical Culture, and (3) as Specialists in Physical Culture; whilst the Department of Militia and Defence offers—(1) Strathcona Grade B Certificates, and (2) Cadet Instructors' Certificates. The scheme for instruction in principles and for practice, applicable both to men and women, seems to be comprehensive and good. Women are taught not only calisthenics, dumb bells, wands, and clubs, but also folk dances and figure marching; and they learn to fence, to swim, likewise to coach and referee the games of basket ball, indoor baseball, and volley ball. A great secret of Empire is care for the mothers of its men.

UNITED STATES.

The United States has a National League of Teacher-Mothers, the qualification for membership being that the mother teaches her children systematically and methodically at home, and the foundress is "sorry for the little child whose mother feels that she must send it (sic) to a kindergarten." We, for our part, are sorry also for the little child whose mother feels that she must refer to him as *it*. If Froebel described the kindergarten as a substitute for genuine home life, it was for him the most beautiful substitute. The American National Kindergarten Association—its President is Dr. John Dewey of Columbia University—proposes to have a kindergarten connected with every public school. It has been doing good work particularly in California, where a State law provides for the opening of a kindergarten upon the petition of parents. Comes the Association and forces on the notice of the parents what the law enables them to get for their children, with the result that many of them have signed the necessary petitions and that the number of kindergartens in California rose from 197 in 1914 to 385 in 1916. Zealous Froebelians are working for similar legislation in other States. The life of the kindergarten mistress is not always serene. In *The Girl and the Kingdom: Learning to Teach*, Kate Douglas Wiggin, pioneer of Froebelianism beyond the Rocky Mountains, tells of her early experiences. The mothers of her charges prepared them for the new education by whipping them into rebellious silence!

The Report for 1914-15 of the General Education Board, New York, shows a continuance of manifold activities. Eight institutions of University or College rank, among them Vassar College for Women, have been assisted by means of grants to increase their endowment funds. In the field of medical education clinical instructors, owing to appropriations from the Board, have been enabled to dispense with private practice and to give their whole time to teaching. Education in the Southern States has been fostered. As a new experiment, the Board appropriated 19,000 dollars for Maine and 10,000 dollars for New Hampshire in order to help the State Colleges of Agriculture in initiating demonstrations of farm-work. It proposes to allot sums for the aid of promising workers in the investigation of problems in educational theory and practice. By invitation it undertook a minute examination of the state of public education in Maryland. The power to accomplish all this beneficent work springs from a capital of 46,000,000 dollars, contributed mainly by Mr. Rockefeller.

To this private body reinforcing educational endeavour in all parts of the United States we have no analogy in England. By its aid to medical education Johns Hopkins University profited, and we learn of "pathological conferences" there, before impossible. The University Circular (or Calendar) for 1915-16 shows that the assets of

the famous academy at Baltimore have now a total value of about 10,000,000 dols., and it contains much matter of general interest. The senior professor, Dr. Basil Lanneau Gildersleeve, no longer lectures, but lives to prove—he graduated at Princeton in 1849—that Greek makes for longevity. Johns Hopkins seeks to advance learning as well as to communicate it, and we observe with pleasure that it provides both for graduate and for undergraduate work in the science of education. Regardless of the odium that attaches to comparisons, we make one. For the Master of Arts degree the fee at Johns Hopkins is ten dollars, and a dissertation must be presented. The older English Universities exact no dissertation, but more dollars. By the way, at Johns Hopkins they say "questionnaire" for *questionnaire* (e.g. "The Results of a Questionnaire on Psychological Terminology"). Is this upon authority or as an innovation?

CAPE OF GOOD HOPE.

The Report on Education just received is dated 1915 and relates to the year ended September 30, 1914. Let us draw from it first a few indications of the state and progress of education in the Province.

In spite of some internal disorders the supply of schools has been much more than doubled in twenty years, the increase being to 4,460 from 1,969 in 1894. The prominent feature of the year under review was an addition of 18,125 pupils to the enrolment, which reached 241,136—102,665 white and 138,471 coloured pupils. The large majority of coloured and native children attended State-aided Mission and Aborigines' schools, in which higher percentages passed the standards for which the pupils were presented. Taken together, white and coloured pupils cost the Government on an average £3 14s. 9d. each. Much difficulty was experienced in collecting fees. The Superintendent-General, looking back, is able to see that organization has been keeping pace with growth in the Cape Province.

At the close of the year the teachers of the aided schools numbered 8,982, or 463 more than at the end of 1913. If farm schools be left out of account, the average number of pupils to each teacher was less than 22. As to sex, there were five women teachers to three men. With regard to the proportion of certificated teachers, the percentage fell in the twelvemonth period from 64.93 to 63.79; for training, in which much was done, could not quite cope with the expansion of the school-system. The advertisement columns of the *Education Gazette* indicate that the salaries paid to teachers at the Cape are, so far as we can judge, insufficient.

Although the European War broke out during the year, the building program was for the most part accomplished, and £183,000 was expended in the erection of school buildings. Let us quote the Report as to the effect of better structures on public opinion.

"With the improvement in the school building and its immediate surroundings there has also come about, partly as a consequence, a change of attitude in regard to the importance of the school's sphere in the life of the community. Once assigned to almost any building or site that might be available, the school has now emerged and claims in most towns of the Province its rightful place. As a result the schooling of the country's children receives at least the consideration that a shopkeeper gives to the sale of his wares, for the school is now housed in a properly constructed building on an adequate site. And, equally important from the State's point of view, this emergence from comparative obscurity gives the school and the schoolmaster the opportunity of holding that position in the eyes of the community to which they are rightly entitled."

INDIA.

We have received the Report, issued by the Government of India, on Education in 1914-15. It tells us that more is being spent on education than at any time hitherto. The total expenditure for the year in question was £7,278,033, an increase for twelve months of nearly £600,000. If at first sight a fall from 7,518,147 pupils in 1913-14 to 7,448,419 on March 31, 1915, is disappointing, it is reassuring to find that the apparent decrease comes of the exclusion of all Native States from the new survey. In the field of religious instruction no new departure has been made. Much has been done for the encouragement of games; more might, perhaps, be attempted to promote manual training. The use of books has been seconded by lanterns—a means of instruction now fairly common throughout India. But of any educational system the teacher is the backbone. Although somewhat higher salaries are being paid, there is only a slight improvement in the qualifications of the teachers apparent, and out of more than 252,000 only 73,258 are trained. The expan-

sion and consolidation of secondary education is proceeding on accepted lines; yet there are grave defects in this domain, and in the Punjab, for example, a constant migration of teachers and pupils from school to school is deplored. Progress in higher education has in some cases been hampered by lack of money. It has, however, been found possible to increase the value of some of the scholarships tenable by Indian students abroad.

We look to see how the Indian girls are treated; for prejudice and apathy have long been in conspiracy against them. The expenditure on public secondary and primary schools for girls was 70½ lakhs, as against 473½ lakhs on those for boys; but some girls attend the boys' schools. There is an increase for the year of 24,294 in the number of girls receiving instruction; but the percentage of such girls to those of school age is only 6.3. It is a better ratio than in the previous year, when the percentage was 5.9, but it brings up a sad vision of untaught women. The Presidency of Madras is conspicuous for its effort to train women teachers. At Delhi the Lady Hardinge Medical College for Women is to be affiliated to the University of Punjab and will begin work, as it is hoped, with the winter term. In connexion with the education of women we may add that *Indian Education* (XIV, 10) suggests the establishment of a School of Domestic Arts at Bombay; for women there, wisely or unwisely, adopt European modes of life without knowing what European ways really are. The result can be compared only to the "Europe music" played before wedding processions in the town.

UNIVERSITIES AND SCHOOLS.

WALES.

The Annual Extra Collegiate Meeting of the Court of the University was held at the University College, Aberystwyth, on Friday, July 14. In the absence of the Senior Deputy-Chancellor (Lord Kenyon), the Junior Deputy-Chancellor (Dr. D. Lleufer Thomas, M.A.) presided. The relationship of the University to the Royal Commission on Higher Education was exhaustively discussed. It was stated by Mr. Wm. George that the Commission did not intend visiting Wales again, and that all the evidence is to be taken in London; and that, contrary to the usual practice of Royal Commissions, no verbatim reports of the evidence were to be preserved. The reason given for this departure from the customary procedure is that at the present time the Government was not prepared to defray the necessary expense. But the Court unanimously supported a motion that a complete record of the evidence should be taken for future reference. A somewhat exciting debate took place on a further proposition that a deputation be appointed to wait on the Welsh M.P.'s in order to enlist their co-operation in presenting the case of the University before the Commission. Principal Griffiths opposed the suggestion on the ground that it was impossible to give any deputation authority to represent the views of the Court, as it was well known that they were very diverse in character, and Prof. Trow (Cardiff) strongly supported this attitude. The Welsh M.P.'s had so far kept themselves utterly aloof from all educational movements in Wales, and the very great majority of them had not shown the slightest interest in the University or its progress. Their ignorance was such that it was very doubtful whether at this crisis in its history they could give any assistance of value. But though this charge of apathy and indifference against our Members of Parliament can easily be substantiated, it appears that Lord Haldane had already approached them privately, and therefore, as a matter of policy, the Court was disposed to acquiesce. And further, as Mr. J. H. Davies (the Registrar of Aberystwyth College) said, it is possible that they might welcome from the Court any information which would tend to dispel their ignorance of the enormous progress which the University and other forms of higher education had made in Wales during the past ten years. Principal Reichel also felt that it would be wise to approach them, as it would be hopeless to expect to get the best terms for Wales unless their representatives thoroughly understood the situation, and were acquainted with our educational machinery. Mr. E. T. John, M.P., endeavoured to defend his colleagues from the charge of indifference by transferring the blame to the Court. He could not recall a single instance when they had been consulted on educational problems by the Court, and they had not been encouraged to interfere. This seems a very feeble defence. However, the upshot of the discussion was that a deputation will call upon our Members of Parliament in order to try to enlighten them, as well as to enlist their sympathy and support.

The real crux of the situation, of course, is the question whether there shall be three independent Universities or one. Principal Reichel proposed a resolution expressing the opinion that adequate teaching freedom for the staffs of the three constituent Colleges can be secured without disruption of the federal system. He stated that even if they had three Universities they would be obliged to work together as far as the Matriculation and the post-graduate work in the higher degrees and Fellowships were concerned. There could be no real independence in practice and, besides, the disruption of the University would alienate a great mass of national sentiment, which would be a serious loss. Ultimately this resolution was carried with only one dissident.

The attitude of Cardiff College is somewhat mysterious. The Senate have unanimously voted against the continuance of the federal system, but the Council have with equal emphasis given their vote in its favour. The other two University Colleges are, of course, strongly in favour of the present plan. At the Court, Principal Griffiths made a speech which may probably be regarded as the official statement of the views of the Senate on the question of federation. He made a great point of the difficulty of obtaining new schemes of study sanctioned by the Court and the University Senate, and generally tried to prove that the present system is unworkable owing to its cumbrousness. They were actually doing injury to Welsh education by allowing things to remain as they are. The Court were somewhat taken aback by this speech, as they were unaware of any such difficulties. Members could not recall a single instance in which the Court had been appealed to on behalf of a scheme of study from Cardiff or any other constituent College. The minutes of the Senate were usually passed without comment or criticism. It was therefore generally felt that the difficulties of securing the freedom of each individual College had been greatly exaggerated.

The Council of the University College, Cardiff, are not satisfied with the reasons given by the Ministry of Munitions for the delay in the completion of the Medical School. They are prepared to allow the completion of the Physiological block, which is in an advanced state of erection, but the completion of the Medical Research block, which had not been commenced, must, owing to the scarcity of labour, be postponed. But Colonel Bruce-Vaughan maintained, and with justice, that the building of a Medical School cannot be detrimental to the national interests. The better the provision for medical research, the better equipped the nation would be, both during the War and afterwards. A deputation has been appointed to meet the Ministry of Munitions, consisting of Lord Aberdare, Earl Plymouth, Lord Pontypridd, Colonel Bruce-Vaughan, and Principal Griffiths.

The elementary teachers in Glamorgan are determined to make a stern fight against the County on the question of the residence of the teachers. Several resignations have already been tendered, and it is understood that others are about to be sent in. The failure of the teachers to secure an injunction in the High Court has in no way damped their keenness for a tussle with the County, and so far no satisfactory solution of this exceptional problem has been found. But we hope, for the credit of Wales, that before matters proceed to extremities a little common sense on both sides will be allowed free play. The dispute is too trivial to be allowed to endanger the education of the children in the schools mainly concerned.

The Central Welsh Board have requested permission to give evidence before the Royal Commission, and a small Sub-committee has been appointed to consider what steps should be taken to prepare a statement.

The University of Wales depends mainly on the Intermediate schools for its supply of students, and therefore it is important that the question of their interrelationship should be carefully considered. Not only is it desirable that the regulations for the present Matriculation Examination of the University should be reviewed, but also the relation of the Higher and Honours Certificate of the Intermediate Schools to the Intermediate Examination of the University should be placed on a more satisfactory basis.

The pamphlet *Wales To-day and To-morrow*, which the Central Welsh Board have circulated, has been considered, though only very perfunctorily, by Cardiff and Swansea. Both these authorities appear to be rather afraid of facing the questions set before them in the pamphlet, and are apparently inclined to let them alone. But we hope that other authorities will show more courage, otherwise nothing will be gained by consulting the educational authorities. The Central Welsh Board are in earnest on the question of reorganization of our educational system, but without the active support of the authorities they can do but little.

These Examinations commenced on July 4 and lasted till Monday.

**The Central
Welsh Board
Examinations.**

the 24th—a period of three weeks. The majority of the pupils, of course, only sat for a portion of the time, and as long as the Welsh schools are allowed so much freedom in the choice of subjects it is probably inevitable that the whole Examination should be spread out over a long period. But the length of the Examination entails much extra work on the staffs of the schools and a certain amount of extra strain on the pupils. Perhaps next year, with the new scheme of amalgamation, it will be possible to curtail the time very considerably. The papers, on the whole, have been very satisfactory.

SCOTLAND.

The number of matriculated students for Session 1915-16 was 361 (151 men and 210 women). During the Whitsuntide term the number was reduced to 274 (78 men and 196 women). The General Council have unanimously resolved to reaffirm their approval of the Preliminary Examination Ordinance and to petition Parliament in its favour. The University Court have fixed Saturday, October 28, as the date for the election of the Lord Rector. The Walker Trustees have offered a prize of £100 for an essay on "Prayer." Anyone in any part of the world may compete, and competitors may write in any language. Essays must be lodged before June 1, 1917, and information as to the conditions, &c., may be obtained from the Secretary of the University.

The University Court have approved the draft Ordinance instituting a degree in Education. The Ordinance is substantially in harmony with the Ordinance drafted by Edinburgh University. The Merchants' House of Glasgow has offered to provide funds, from the Buchanan and Ewing bequests, for the payment of University Lecturers in Electrical Therapeutics at the Royal and Western Infirmarys. On Commemoration Day, June 26, there was presented to the University a memorial of the late William Smart, LL.D., Professor of Political Economy, in the form of his private library of works on Economics and kindred subjects. The memorial was subscribed by his students and friends.

The General Council have followed the example of the Glasgow General Council in petitioning Parliament against the passing of the Preliminary Examination Ordinance. The University Court and Senate have sanctioned an arrangement for combining, during next Session, the work of the Faculty of Divinity with that of the United Free Church College, as the number of Divinity students in the University and the College is expected to be very small, owing to the War. A similar arrangement is being made at Edinburgh, and the proposal has been approved by the Church of Scotland and the United Free Church.

Sir Alfred Ewing has been installed as Principal of the University, and he presided and delivered an address at the graduation ceremony on July 11. The University Court, after a consideration of a report from the Senatus, have resolved to make provision within the University for the instruction of women in the Faculty of Medicine, and a Committee has been appointed to make the necessary arrangements. Hitherto women students of medicine have had to take extra-mural courses at Edinburgh; and the University is to be congratulated on having at last come into line with the other Scottish Universities in this matter.

In view of the shortage of teachers of higher subjects in secondary schools, the Education Department have intimated that it may be desirable to encourage candidates eligible for training for the Higher Subjects Certificate to defer their training in order to undertake temporary service in schools. The Department are willing in such cases to grant concessions as regards the length of training to be required, on a return to more normal conditions. The Edinburgh Committee recommend that the period of training be reduced by not more than six months, in those cases only in which satisfactory reports as to the work of the temporary teachers are received from the school authorities. The Department have fixed at 340 the annual number of candidates for the Teachers' Certificate whose enrolment under the Committee can be sanctioned. Seventy-seven students are at present on military service.

The Report of the Department on Education in Scotland is concerned mainly with the effects of the War. The latest returns show that 2,200 out of 3,536 teachers of military age have either joined the forces or attested. School accommodation has also been considerably reduced, owing to the re-

quirements of the military authorities. As regards the demand for child labour, the report says: "It was not always clear that the request for children was due to the impossibility of obtaining any other labour and not rather to the desire for cheaper labour." In some cases exemption has been granted on condition that the children remain at school, after reaching the age of fourteen, for a period corresponding to the time they are now at work. The number of men students at the training centres has decreased from 508 in 1913-14 to 188 in 1915-16. The number of women students has increased during the same period from 2,062 to 2,284.

IRELAND.

Queen's University, Belfast, held its Annual Summer Graduation ceremony on July 11, the Rev. Dr. Hamilton (Vice-Chancellor) presiding. Reference was made to the service rendered by the University staff in War work. Two of the staff have fallen and one is a prisoner, while several others are serving in various capacities in France and England. The proceedings included a solemn commemoration of the members of the University—thirty-four in all—who had fallen in the War during the year.

On July 21 a meeting of secondary teachers from all parts of Ireland was held in the Mansion House in Dublin, to protest against "the persistent efforts of the Intermediate Education Board to destroy the teaching of science in Irish secondary schools." The Chairman (Mr. G. Watson) said that last January the Board had suggested that the £28,000 grant paid to the secondary schools in aid of science teaching might be saved if the Board were allowed to carry out the work instead of the Department of Agriculture and Technical Instruction. Another innovation, introduced this year, was the institution of written examinations, without any practical test, for pass candidates in science subjects—even such subjects as woodwork. It was resolved to ask both the Intermediate Board and the Department to receive a deputation appointed by the meeting.

On the same day, in London, Mr. Herbert Samuel, the Home Secretary, received a deputation of the Irish National Teachers' Organization to urge the teachers' claim to be paid their salaries monthly instead of part annually and part quarterly. This is a grievance of long standing with Irish teachers, and is, of course, more keenly felt since the cost of living has risen so much. Mr. Mansfield, the spokesman of the deputation, pointed out that the average salary of an Irish teacher did not exceed £1. 12s. per week, a sum equivalent in purchasing power to a guinea in pre-War days; and that teachers in Great Britain, who received larger salaries, were paid monthly. Mr. Samuel admitted the justice of the claim, and promised to urge it without delay on the Chancellor of the Exchequer.

The Rev. Dr. Taylor, one of the Commissioners of National Education, speaking in public lately in Belfast, took occasion to refute the charges of disloyalty brought against the national teachers since the suppression of the Sinn Féin rising. The Commissioners had been making inquiries, and their inspectors' reports and the police reports showed that very few teachers had been in any way connected with the rising. The Commissioners hoped to issue a statement in the near future.

At the Annual Conference of the Methodist Church, held during the month in Belfast, a resolution was passed desiring that the teaching of history should be continued in national schools, safeguards being taken to eliminate matters of controversy or suggestive of sedition from the textbooks, which should include the undisputed facts of history.

The Board of National Education are at present distributing among the schools a pamphlet by Mrs. Starkie (the wife of the Resident Commissioner), dealing with the subject of patriotism, with special reference, of course, to Ireland.

At the Annual Meeting of the Non-Subscribing Presbyterian Church of Ireland, held during the month in Belfast, a resolution was passed stating that the best interests of Irish primary education would be served by freeing it from denominational control. One of the speakers said that the principle of undenominational education, if accepted, would be a powerful agent in making Ireland happier by drawing Catholics and Protestants together; another stated his belief that there existed among the Catholic laity as strong an antagonism to the domination of the cleric as in the Protestant Churches (which is very likely true). In a sermon preached nearly at the same time in Dublin in support of some of the Church schools, Dr. Bernard, the Archbishop of Dublin, upheld the present denominational system, and declared that dogmatic teaching was essential if religion was not to evaporate in mere

sentiment or emotion. Whatever feelings the laity of this country may entertain about undenominational education, it is certain that the overwhelming mass of clerical opinion, whether Protestant or Catholic, is strongly against it.

The Feis Ceoil competitions were held in Dublin during the week July 17-22, and, despite the inconveniences due to their postponement, met with success. The Feis was brought to a close by the prize-winners' concert, held in the open air on Saturday evening.

SCHOOLS.

HAILEYBURY COLLEGE.—The following prizes have been awarded:—Latin Prose, M. Wilkinson; English Verse, N. H. K. A. Coghill; Greek Prose, H. H. S. Wright; English Essay, M. Wilkinson; Mathematics, D. W. Roper; French, M. C. H. Gray; Physics, G. L. Troughton; Chemistry, C. R. Scott; Natural Science, C. R. Scott; Recitation, H. H. S. Wright; English Literature, C. J. Racliffe; Jackson Art Prize, J. S. Wright. Mr. G. H. S. Lewis, who joined the staff in 1886, and who will be remembered by many generations of Haileyburians for his work in connexion with the choir, retired last Christmas; Mr. A. J. Richards also left, and the following masters went away to take up military duties:—Mr. A. Pickles, Mr. D. J. Walters, Mr. B. H. Sisson, and Mr. F. G. Brewer. Their places were taken in the Easter term by Mr. W. R. M. Clarke, Mr. L. E. Upcott, Captain E. A. Campbell, R.A., Mr. B. Hylton Stewart, who has succeeded to Mr. Lewis's work, and Mr. A. J. Bower. At the end of the Easter term we lost Mr. L. E. Upcott, and the staff has since been joined by Mr. J. M. Bell, who retired from it five years ago and resumes his Army Class work, and by Mr. A. E. B. Crawford. Mr. C. A. Ronald, owing to an injury, has been absent for the greater part of this term, and his work has been taken by Mr. A. C. Grylls.

On the results of the recent examination at St. Paul's Girls' School, Brook Green, Hammersmith, scholarships were awarded as follows:—Senior: V. Browne, M. Farrell, N. Inge, L. Mair, S. Pattison, F. Taylor. Junior: M. Browne, I. Dunand, Y. Inge, M. Jennings, C. Saville.

PRIZE COMPETITIONS.

The Translation Prize for July is awarded to "Gothicus."

The winner of the Translation Prize for April is H. E. G. Evans, Esq., St. Mary's House, Tenby.

Dangeau étoit un gentilhomme de Beauce, tout uni, et huguenot dans sa première jeunesse; toute sa famille l'étoit qui ne tenoit à personne. Il ne manquoit pas d'un certain esprit, surtout de celui du monde, et de conduite. Il avoit beaucoup d'honneur et de probité. Le jeu, par lequel il se fourra à la cour, qui étoit alors toute d'amour et de fêtes, incontinent après la mort de la reine mère, le mit dans les meilleures compagnies. Il y gagna tout son bien; il eut le bonheur de n'être jamais soupçonné; il prêta obligeamment; il se fit des amis, et la sûreté de son commerce lui en acquit d'utiles et de véritables. Il fit sa cour aux maltresses du roi; le jeu le mit de leurs parties avec lui: elles le traitèrent avec familiarité, et lui procurèrent celle du roi. Il faisoit des vers, étoit bien fait, de bonne mine et galant; le voilà de tout à la cour, mais toujours subalterne. Jouant un jour avec le roi et Mme de Montespan dans les commencements des grandes augmentations de Versailles, le roi, qui avoit été importuné d'un logement pour lui et qui avoit bien d'autres gens qui en demandoient, se mit à le plaisanter sur sa facilité à faire des vers, qui, à la vérité, étoient rarement bons, et tout d'un coup lui proposa des rimes fort sauvages, et lui promit un logement s'il les remplissoit sur-le-champ. Dangeau accepta, n'y pensa qu'un moment, les remplit toutes, et eut ainsi un logement.

By **GOTHICUS.**

Dangeau was a poor nobleman of Beauce, absolutely simple and unaffected; in his young days he was a Huguenot, as were all the members of his family, who were free to act independently. He was not lacking in discernment, especially as regards the usages and manners of society. He was the soul of honour and integrity. By his skill at cards he obtained a footing at court, and was thus enabled to mix with the best society, for at that time,

(Continued on page 480.)

UNIVERSITY OF EDINBURGH.

Chancellor: The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &c.

Rector: (Vacant).

Principal and Vice-Chancellor: Sir J. ALFRED EWING, K.C.B., M.A., LL.D., F.R.S.

Secretary of Senatus: Professor Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The **Winter Session** begins about the beginning of October and closes about the middle of March.

The **Summer Session**, except in Law, extends from about the middle of April to the end of June.

The University embraces **Six Faculties**, viz.: **Arts, Science, Divinity, Law, Medicine and Surgery, and Music**, in all of which full instruction is given and Degrees are conferred. There are many different avenues to the **Arts Degrees**, the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The wide scope of the Arts Curriculum permits of the Combination of Arts, Science, Medical or Special Studies, and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Litt., D.Phil., and D.Sc. are conferred. **A Diploma in Education** is conferred upon duly qualified candidates. Education in Military subjects is given in connexion with the Scheme of Allotment of Army Commissions to Graduates of the University. Degrees in **Science** (B.Sc. and D.Sc.) may be taken in **Pure Science, Engineering, Public Health, and Veterinary Science**; and the Degree of B.Sc. in **Agriculture and Forestry**. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in **Divinity** affords a thorough training in Theological subjects, and the Degree of Bachelor of Divinity (B.D.) is conferred. The **Law** Faculty, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and Constitutional History, Roman Law, and Political Economy, as also Lectureships in other important branches of the Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of **Medicine** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.); and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. **A Diploma in Tropical Medicine and Hygiene** (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and specially approved Medical Practitioners who have resided abroad. There is also a **Diploma in Psychiatry** (Dipl. Psych.). A University **Certificate in Tropical Diseases** is conferred on qualified Medical Practitioners who have attended Courses in the University on practical Bacteriology and Tropical Diseases. In **Music** there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 43 Professors, over 90 Lecturers, and about 60 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £20,305. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in Arts, Science, Divinity, Law, and Music, and they are admitted to graduation in Arts, Science, Law, Medicine, and Music, the training for Degrees in Medicine being afforded by well equipped extra-academical Schools.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the **DEANS OF THE FACULTIES**, or from the **CLERK OF SENATUS**; and full details are given in the University Calendar, published by Mr. JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 5d. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.:—Arts and Science Preliminary, 1s.; Arts Bursaries, 6d.; Medical Preliminary, 6d.; Degree papers: Arts, 1s.; Science, 1s.; Divinity, Law, Medicine, and Music, 6d. each.

Copies of "THE JOURNAL OF EDUCATION" for Denmark, Greece, Holland, Norway, Portugal, Roumania, Spain, Sweden, Switzerland, South American States, and the United States can be accepted by the Postal Authorities only from recognized Publishers who have obtained special permission from the War Office, and comply with certain formalities. Papers posted by unauthorized persons are stopped.

Mr. WILLIAM RICE, Junr., Publisher of "THE JOURNAL OF EDUCATION," has obtained the necessary Permit, and he will be pleased to forward copies to persons living in the above-mentioned Countries at the rate of Eightpence each, post free.

FREE SHORTHAND LESSONS

The First Year of the Great War

Being the Story of the First Phase of the Great
World Struggle for Honour, Justice, and Truth.
Told for Boys and Girls of the British Empire by

RICHARD WILSON, B.A., D.Litt.,
Author of "Men and Movements in European History," &c.

WITH TWENTY PAGE ILLUSTRATIONS AND FOUR SPLENDID MAPS.

OPINIONS OF THE PRESS.

"The book is written in an interesting style, and is very suitable for use as a school reader."—*Athenæum*.

"The book is intended for children, and for them nothing better could be had."—*Scotsman*.

"The story of the Great War is told simply, faithfully, and graphically."—*Edinburgh Evening News*.

"As a 'Reader' for the use of schools it cannot fail to be popular, and the maps and illustrations powerfully help the narrative."—*Glasgow Herald*.

"Told in a manner which must command the attention, not only of those to whom it is immediately addressed, but of all, let their age be what it may, who begin the perusal of its pages. Mr. Wilson is the master of a clear and also an attractive style. What is more, he possesses a thorough understanding of the several situations with which he deals, with the relations they bear to one another, and of their influence on the progress and the ultimate issue of the war."—*Glasgow Evening Citizen*.

"Young readers will be fascinated by the author's animated style."—*Aberdeen Journal*.

"As regards both its matter and its manner we can give this book unstinted praise. We have come across no book that would form a better supplementary reader than this at the present time."—*Scottish Class Teacher*.

Specimen Copies in Cloth Boards will be sent post free to Teachers for 1s.

339 High Street, W. & R. CHAMBERS, LTD. 38 Soho Square, London, Edinburgh.

IDOLA LINGUARUM

A SERIES OF ARTICLES ON LANGUAGE TEACHING

Already published in THE JOURNAL OF EDUCATION:

February 1914.	INTRODUCTORY ARTICLE. By Professor JOHN ADAMS.

LONDON: WILLIAM RICE, JUNIOR, 3 BROADWAY, LUDGATE HILL, E.C.

immediately after the death of the Queen Mother, the court devoted itself heart and soul to gallantry and the pursuit of pleasure. He made all his money by play, but luckily no breath of suspicion ever attached itself to him. He lent money with ready compliance; he was very popular, and his trustworthiness secured for him the best and truest of friends. He courted the favour of the royal mistresses, and was included in their card-parties with the King; they treated him with affability, and their good offices procured for him the friendship of his Royal master. He wrote verses, was well set-up, handsome, and courteous; he took a part in every affair at court, though invariably in a subordinate rôle. One day, during the early stages of the extensive additions at Versailles, he was playing with the King and Mme de Montespan, when the King, who had been pestered to assign him an apartment, and had many other similar claimants, began to rally him on his skill in the making of verses—which, by the way, were seldom good—and, on the spur of the moment, suggested some very outlandish rimes, promising him an apartment if he completed the stanzas then and there. Dangeau accepted the challenge, and, after a few moments' thought, accomplished the task, and thus secured the coveted apartment.

The character of Dangeau is a good specimen of Saint-Simon's *Mémoires*. Dangeau is one of his *bêtes noires*, and, though he paints what he sees, yet he sees all with jaundiced eyes, hints at a fault, and damns with faint praise. Dangeau, who belonged to one of the oldest families in France, is "a gentleman of Beauce, without pretensions, who began life as a Huguenot like the rest of his family, who had no party ties"—as we should say, he came of a respectable Dissenting family. Littré, quoting the passage, gives for "tout uni," "un homme simple et sans prétensions." "He was not lacking in parts, especially those that shine in social life and in conduct." The style is *décomposé*, and the next sentence needs some remodelling to turn it into easy English. "The Court at that period had plunged into festivities and love-making on the death of the Queen Mother, and, thanks to his skill as a gamester, he wormed his way into Court life and the highest society in the land." "He had the good fortune never to be even suspected." This sounds strange after the statement that he was a man of honour, and Saint-Simon obviously suggests that he may have

cheated, but was never found out. *La sûreté de son commerce*: "his trustworthiness in business matters." *Il fit sa cour*: "he paid every attention to," not "he made love to." *Le voilà de tout à la cour*: "thus we see him taking part in everything that went on at Court, but always a subordinate part." *Jouant*: note the syntactical irregularity, which may well be retained in English: "playing one day with the king . . . the king," &c. Few understood, or showed that they understood, the exact task set by Louis. The king invented, or more probably read out, some ridiculous or far-fetched *bouts-rimés*, and Dangeau was challenged to complete impromptu the lines. "Chaff" is clearly too modern a word for *plaisanter*: "quiz" will suit. *Logement* is, of course, an apartment in the new buildings of Versailles. "Gothicus" is a little stilted, as in the sentence "they treated him with affability, &c.," for "on familiar terms, and induced the King to do likewise."

We classify the 77 versions received as follows:—

First Class.—Senex, Le Vidame, Emile, Pat, Gothicus, P.E.F., Menevia, Brenda, Yod, Shax.

Second Class.—Athos, Felicia, Nibbidard, Sirach, Serpetta, Aisne, Sir Ozanna le Cure Hardy, Chislehurst, Conygar, Santal, Senni, Newnham Croft, Malheureux, Garnet, Chingleput, C.M.H., Monilos, Pixie, Eleanor Bendall, S.E.A., Duster Jane, Bas-Bleu, M.E.G., Talbot, Hint, N.S.A., L.H., Shim, Anne.

Third Class.—M.C.H., Mayfield, Moriando Vivo, Avis, S.M.P., Le Roi Soleil, Bulbul, Oakthorpe, M.T.S., Catriona, S.S.M., Jean Gal, Lelac, H9, A.D., E.H.J., Espérance, Topsy, Pinner, R.M.C., Ex humilibus excelsior.

Fourth Class.—L.R., B.E.S., W.H.S., Lalage, Y.Z., Dranreb, Pasteur, Peter, Lulu.

Fifth Class.—Rastra, Salve, Rap, O.N., Cloe, Quid, Loos, 45.

HOLIDAY PRIZE.

War conditions, especially restrictions on photography and sketching, prevent us from offering Holiday Prizes this year, but we intend to offer the usual Translation Prize in September.

Messrs. TRUMAN & KNIGHTLEY, Ltd.,

Educational Agents,
SHEFFIELD HOUSE, 158 to 162 OXFORD STREET, LONDON, W.

ASSISTANT MISTRESSES' DEPARTMENT.

Ladies seeking appointments in Public or Private Schools for next term should apply to Messrs. TRUMAN & KNIGHTLEY, who will be pleased to give their requirements prompt and careful attention.

The following are selected from a large number of AUTUMN TERM VACANCIES, for which Messrs. TRUMAN & KNIGHTLEY have been instructed to select and put forward candidates:—

ENGLISH AND GENERAL FORM MISTRESSES.

- English Lecturer** for Church of England Training College in Home Counties. Degree and experience essential. Res. £100.—A 53716.
- Senior Mistress** in Public Secondary School in North of England, to teach English. Honours degree and experience essential. Non-res. £140, increasing.—A 54760.
- English Mistress** for large Public School for Boys in Egypt. French a recommendation. Res. £100 with passage.—AD 54805.
- Mistress** for Church of England Public Boarding School in Home Counties, to teach Mathematics for Middle Forms, with elementary Latin. Degree or Higher Local Honours. Churchwoman. Non-res. £120, or could be made resident.—A 54978.
- Mistress** for Boys' Preparatory School in South Wales, to teach Latin, English, and Mathematics; French or Swedish Drill a recommendation. Good qualifications, experience, and Churchwoman. Res. £80.—A 54772.
- Mistress** in high-class Preparatory School for Boys on South-east Coast, to teach History throughout the school, with elementary Mathematics. Latin or Geography would be useful as subsidiary subjects. Res. about £80.—A 55003.
- Geography Mistress** for Mixed Public School on North-west Coast. History, elementary Mathematics, or French a recommendation. Degree essential, training if possible. Non-res. £105 to £120.—A 54987.
- English Mistress** for high-class Private Boarding and Day School in London, with History, Latin, and some other subject, such as Geography on modern lines or French. Good qualifications and experience. Res. £70 to £80.—A 54326.
- Mistress** for high-class Private School on South Coast, to teach Geography on modern lines and History (including English History, with a little European and Church History). Scripture or German a recommendation. Good qualifications, experience in coaching for examinations, and Churchwoman. Res. £60.—A 53971.
- Middle Form Mistress** for high-class Private School in Home Counties, able to teach also Geography on modern lines. Good qualifications, with experience with girls of good social position. Res. £60 to £70.—A 52231.

MODERN LANGUAGE MISTRESSES.

- Modern Language Mistress** for Church of England Public Boarding School in Home Counties, to teach German to highest Forms and French to Middle Forms. Good qualifications and experience. Churchwoman. Non-res. £130, or the post might be made resident.—A 54979.
- French Mistress** in Municipal Secondary School in North-eastern County, to teach French in the upper part of the school to Senior Local standard. Temporary for duration of War. Non-res. £160 to £180.—AD 54816.
- French Mistress** for Dual Secondary School in West Midlands, to teach French throughout the school, with either Geography or Needlework. Good qualifications looked for, preference given to one with residence abroad and experience. Non-res. £110 to £120.—A 54595.

CLASSICAL MISTRESSES.

- Classical Mistress** for Grammar School for Boys in Midlands, to take Classics below the Sixth Form. Temporary for one term in first instance. Salary £50 for the term non-res.—AD 54856.
- Classical Mistress** for Girls' County School in North Wales. Honours degree from Oxford, Cambridge, or London. Non-res. £120 to £135.—A 54895.

MATHEMATICAL AND SCIENCE MISTRESSES.

- Science Mistress** for first-rate Endowed School for Boys in South-eastern County, to teach Chemistry and Physics. Temporary post in first instance. Non-res. £120 to £150.—A 54602.
- Mathematical Mistress** for first-class Private Boarding School in the Midlands, to teach Mathematics to Higher Local standard. Elementary Latin a recommendation. Good qualifications and experience essential. Res. £120 increasing.—A 53124.
- Mathematics Mistress** for Public Secondary School for Girls in Midlands. Geography or Botany a recommendation. Honours degree or equivalent, training or experience. Non-res. £110 to £140 increasing.—A 54681.
- Lecturer** for Elementary Training College in the Midlands, to teach Mathematics to Degree standard, with Geography and Games. Honours Degree and Churchwoman essential. Res. from £75.—A 53715.
- Science Mistress** for Boys' Grammar School in the South-west of England. Res. £100 or non-res. £130.—AD 50568.
- Mathematical Mistress** for large high-class Private School near London, to teach Mathematics to Matriculation standard, and some Science. Good qualifications and some experience essential. Res. £60 to £70.—A 54007.

KINDERGARTEN MISTRESSES.

- Kindergarten Mistress** for Boarding and Day School in Natal, able to train students. Higher N.F.U. Ablett's Drawing a recommendation. Res. £90, £100, £110 in three successive years. Outward passage paid.—A 54788.
- Kindergarten Mistress** for large Public School for Boys in Egypt. Res. £100, with passage.—A 54806.
- Kindergarten Mistress** for Girls' High School in India. Froebel Certificate, with good experience essential. Non-res. £160 and passage.—A 54426.

ART MISTRESSES.

- Art Mistress** for important Preparatory School for Girls in Scotland, to teach Handicrafts, chiefly Bookbinding and Carpentry, and good Drawing. Non-res. £100 to £120.—B 53081.
- Art Mistress** for Mixed Public Secondary School in South-west of England, to teach Drawing throughout the School, and give some assistance in the lower part of the School. Good qualifications in Drawing essential. Non-res. £90 to £100, increasing to £120.—B 54972.
- Art Mistress** for Public Secondary Dual School in Wales, to teach Drawing and also Physical Exercises to girls. General Form subjects a recommendation. Good qualifications. Non-res. £110.—B 54952.

MUSIC MISTRESSES.

- Music Mistress** for high-class Private Boarding School on South-east Coast. Good qualifications and Boarding School experience. Res. about £50.—B 55001.
- Music Mistress** for Boys' Preparatory School in Midlands, to teach Pianoforte and Singing, with elementary Form subjects. Res. post, fair salary.—BD 54505.
- Music Mistress** for good-class Private Boarding School on South Coast, to teach Pianoforte, Theory, Harmony, and elementary Viola. L.R.A.M. or A.R.C.M. and experience in preparing for Associated Board Examinations. Res. post, fair salary.—B 54866.
- Music Mistress** for Proprietary Secondary School on South Coast, to teach chiefly Violin, with some Pianoforte and Aural Culture. Experience. Res. £40 to £50.—B 54363.

Messrs. TRUMAN & KNIGHTLEY assist qualified **Lady Matrons, Housekeepers, and House Mistresses** to find appointments in Boys' and Girls' Schools.

Ladies desiring further information of any of the above and of other suitable Vacancies should write fully to Messrs. TRUMAN & KNIGHTLEY, stating their age, qualifications, &c., and enclosing copies of their testimonials.

NO CHARGE OF ANY KIND is made to Applicants unless an engagement be secured through this Agency, when the terms are reasonable. Prospectus, terms, &c., will be forwarded on application.

SCHOOL TRANSFERS & PARTNERSHIPS.

A separate Department, under the personal management of one of the Directors, is devoted entirely to the negotiation of School Transfers and Partnerships.

No charge is made to purchasers.

"IT IS CLEAR

that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence."

The Journal of Education, June, 1916.

This is the definition, by a competent judge, of what should constitute a
USEFUL SCHOLASTIC AGENT.

It may be presumed that no one would knowingly make trial of the services of any other kind, but it is still true that a proportion of Principals are induced to yield to the importunities of plausible and worthless concerns, with the resultant loss and disappointment that might be expected. This is a disillusioning experience for which there is no necessity. The established, reliable Scholastic Agencies are not many in number, and they are well known, and their record and standing easily to be ascertained. As one of these we have a sufficient claim to clients' confidence. If, further, we obtain the greater share of Parents' Inquiries, we also take unusual pains to secure them. At present our advertisements are appearing in nearly 400 papers in this country alone; and, outside of enemy countries, the War has made no difference in the circulation of our List of Schools.

As a result, few days pass without at least one letter of thanks from parents who appreciate the assistance we have given them. Principals are equally generous in expressing their indebtedness, as these acknowledgments, received in July from two Head Masters of important schools, testify :—

"Personally, I have found your firm to bring in 90 per cent. of the pupils who come to me through Scholastic Agents."

"I must again express my appreciation of the splendid way you have helped me. It was the best day's work I ever did when I entrusted you with a new prospectus and joined your Agency."

If you have not yet made trial of our services, we shall be glad to hear from you, with particulars of your School.

J. & J. PATON, **EDUCATIONAL AGENTS,**

JOINT SCHOLASTIC AGENCY

23 Southampton St., Bloomsbury Sq., W.C.
This Agency is under the direction of a Committee representing the following leading Educational Associations:—

HEAD MASTERS' CONFERENCE.
INCORPORATED ASSOCIATION OF HEAD MASTERS.
COLLEGE OF PRECEPTORS. TEACHERS' GUILD.
ASSOCIATION OF ASSISTANT MASTERS.
HEAD MASTERS OF PREPARATORY SCHOOLS.
WELSH COUNTY SCHOOLS ASSOCIATION.
ASSOCIATION OF TECHNICAL INSTITUTIONS.

Registrar: Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. The lowest possible fees are therefore charged.

Interviews by appointment from 12 noon to 1.30 p.m., and from 3 p.m. to 5 p.m.; on Saturdays, from 11 a.m. to 12.30 p.m.

A PROSPECTUS will be sent on application.

THE BERGMAN ÖSTERBERG PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

Trustees:

Sir GEORGE NEWMAN, M.D. (Chairman).
Major WALDORF ASTOR, M.P.
Dr. CHRISTOPHER ADDISON, M.P.
Lord SHAW OF DUNFERMLINE.
The Marchioness of SALISBURY.

Principal:

Miss M. H. MEADE, B.A. (Moral Sciences Tripos).

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics, Stockholm).

The College was opened in 1885, and was the first of its kind in England. Students are prepared to be teachers of Scientific Physical Education on Ling's Swedish System. The Course extends over two years. It includes the study of Anatomy, Physiology, Theory of Education; the Theory and Practice of Gymnastics, Massage and Medical Gymnastics, Dancing and Outdoor Games. Students practise teaching in schools in the neighbourhood. The College stands in its own ground of 15 acres, in a beautiful and healthy locality close to Dartford Heath.

The demand for mistresses of physical training holding the Diploma of this College is at present far in excess of the supply.

The course begins in September. Further particulars may be obtained on application to the SECRETARY.

BERGMAN ÖSTERBERG UNION OF TRAINED GYMNASTIC TEACHERS.

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

TEACHERS FOR SOUTH AFRICA.

QUALIFIED Women Teachers of all grades should apply to—THE EDUCATION SECRETARY, South African Colonization Society, 23 Army and Navy Mansions, 115 Victoria Street, S.W.

DENMARK HILL PHYSICAL TRAINING COLLEGE AND SCHOOL OF MASSAGE.

SUNRAY AVENUE, HERNE HILL, LONDON, S.E.

This Training College for those wishing to become Gymnastics and Games Mistresses or Professional Masseuses is efficiently staffed by Teachers recognized by the British College of Physical Education and the Incorp. Soc. of Trained Masseuses as qualified to train Students for their examinations.

Principal: Miss E. SPELMAN STANGER, Examiner and Member of the Brit. Coll. of Phys. Ed and Incorp. Soc. of Trained Masseuses.

University Tutorial College, LONDON.

(Affiliated to University Correspondence College.)

LOUISA B. ALDRICH-BLAKE, M.S., M.D.

UNIVERSITY OF LONDON, UNIVERSITY COLLEGE.

**DEPARTMENT OF APPLIED STATISTICS
AND EUGENICS.**

Under the direction of Prof. KARL PEARSON, F.R.S.

THE Laboratories are open from
9.30 to 5.30 daily, and a complete course of
training in the Theory and Practice of Statistics is
provided. Lectures and laboratory work begin in the
first week of October.

Statistics now forms a subject for the B.Sc. Degree
of the University of London, and there has been an
increasing demand for statistically trained men and
women in Government and other offices.

A Special Two Year Course has been arranged in
conjunction with the Department of Pure Mathe-
matics for students desiring training as computers or
statistical bureau clerks.

Provision is made for assisting students in research
work, especially in dealing with statistical problems
in Medicine, Sociology, and Anthropometry. Train-
ing is provided for those interested in eugenic and
biometric problems, and in pedigree work in
Heredity.

Prof. PEARSON will meet intending students on
Tuesday, October 3rd, between 10 a.m. and 1 p.m.,
and 4 p.m. and 6 p.m.

For further particulars apply to the SECRETARY,
University College, London (Gower Street).

UNIVERSITY COLLEGE
HOSPITAL MEDICAL SCHOOL.
(UNIVERSITY OF LONDON).
UNIVERSITY STREET, GOWER STREET, W.C.

The EIGHTY-NINTH SESSION will COM-
MENCE on MONDAY, October 2nd, 1916.

The HOSPITAL and MEDICAL SCHOOL are
fully equipped for the teaching of the Medical
Sciences by the most modern methods.

The HOSPITAL accommodates over 300 patients.
The in-patients treated annually number over 4,600,
and the out-patients about 59,000.

The MEDICAL SCHOOL contains a large Library,
commodious Students' Society Rooms, including a
Gymnasium and Squash Racket Court, large Labora-
tories for the Study of Pathology, Morbid Anatomy,
and Pathological Chemistry, and a large Museum.

In addition, the School is provided with fully
equipped departments for the teaching of BAC-
TERIOLOGY and for the carrying out of
RESEARCH.

The DENTAL DEPARTMENT (late National
Dental Hospital, Great Portland Street) is well
equipped for the teaching of Dental Surgery.

ROCKS, MINERALS, METALS, AND ORES.

**What they are and
Where they are found.**

This "Elementary Geological
Series" consists of five sets, each
set containing 20 named and lo-
cated specimens, with descriptive
notes, 2s. 6d., or post free, 3s.

METALLIC MINERALS,

contains 20 named specimens of
Metallic Minerals and Ores, in which
the principal groups are represented,
including Ores of Copper, Iron, Lead,
Zinc, Tin, &c. ... 2s. 6d.

EARTHY MINERALS,

contains 20 named specimens of
Earthy Minerals, including Fluor,
Apatite, Felspar, Talc, Hornblende,
&c. ... 2s. 6d.

IGNEOUS ROCKS,

contains 20 named specimens of
Igneous, Volcanic, and Metamorphic
Rocks, including Obsidian, Trachyte,
Granite, Lava, Basalt, &c. 2s. 6d.

SEDIMENTARY ROCKS,

contains 20 named specimens of
Sedimentary Rocks, including Crag,
Gault, Oolite, Lias, Limestone, Sand-
stone, &c. ... 2s. 6d.

FOSSILS,

contains 20 named specimens of
British Fossils, including examples
from Crag, Eocene, Gault, Oolite,
Carboniferous, &c. ... 2s. 6d.

The above 100 specimens of Minerals,
post free, 12s. 6d.

PRECIOUS STONES,

contains 20 examples of well known
stones in use for ornamentation, as
Topaz, Ruby, Garnet, Emerald,
Turquoise, Amethyst, Bloodstone,
Lapis Lazuli, Jasper, &c. ... 5s. 0d.

METALS,

"Their Sources and Uses."

This is a series of twelve 2-inch
specimens of Iron, Steel, Tin, Lead,
Zinc, Copper, Bronze, Brass, Pewter,
Nickel, German Silver and Aluminium,
with notes giving the sources and
uses of each metal, also information
on the richer and rarer metals of
Gold, Silver, Platinum, &c. 2s. 6d.

The above seven sets are packed and
sent carriage free for 20s. through
the United Kingdom.

ILLUSTRATED CATALOGUE POST FREE.

COX & CO., New Oxford St., London.

CITY AND GUILDS TECHNICAL COLLEGE, FINSBURY.

(LEONARD STREET, LONDON, E.C.)

MECHANICAL ENGINEERING Prof. MARGETSON, M.Sc.
CIVIL ENGINEERING ... Prof. MARGETSON, M.Sc.
ELECTRICAL ENGINEERING Prof. W. ECCLES, D.Sc., A.R.C.S., M.I.M.E.
APPLIED CHEMISTRY ... Prof. G. T. MORGAN, D.Sc., F.R.S.

The training is adapted to the needs of various students, including (a) pupils from Secondary Schools, above the age of 15, who desire to receive a practical and scientific training bearing upon their future industry or profession; and (b) young men who, having previously served a pupilage or apprenticeship in works, desire to go through a more systematic training in engineering and applied chemistry.

The College contains laboratories and workshops equipped for instructional purposes, including Engineering and Hydraulic Laboratories, Drawing Offices, Wood and Metal Workshops, Mechanics, Physics, Electrical and Chemical Laboratories, and Dynamo Rooms.

The next Entrance Examination will be held on September 19 in the subjects of Mathematics and English, but the Matriculation Examination of any British University is accepted instead.

The Fees are £20 per annum.

The Programme giving particulars of Admission, Entrance Examination, Syllabuses of Instruction, and other information may be had post free on application to the REGISTRAR of the College at the above address.

MANAGING DIRECTORS:

S. A. TRUMAN. JAMES HEARD, B.A.
(Westminster and Trinity College, Cambridge).

This Agency is under distinguished patronage, including that of the Principals of the majority of our leading Public and Private Schools.

ASSISTANT MISTRESSES.

Messrs. TRUMAN & KNIGHTLEY introduce University and other qualified English and Foreign Mistresses and Teachers of Special Subjects in Secondary, Public, and Private Schools. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

ASSISTANT MASTERS AND TUTORS.

Messrs. TRUMAN & KNIGHTLEY introduce University and other qualified English and Foreign Masters and Tutors to Schools and Private Families. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

LADY MATRONS AND HOUSEKEEPERS.

Messrs. TRUMAN & KNIGHTLEY introduce well qualified and experienced Lady Matrons and Housekeepers to Boys' and Girls' Schools. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

TRANSFER OF SCHOOLS AND PARTNERSHIPS.

Messrs. TRUMAN & KNIGHTLEY undertake all negotiations connected with the Transfer of Schools and Partnerships. All communications are treated in the strictest confidence. *No charge is made to Purchasers, and no charge to Vendors unless a sale or partnership be effected by this Agency.*

Any negotiations entrusted to Messrs. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

GIRLS' SCHOOL TRANSFERS AND PARTNERSHIPS.

Messrs. GABBITAS, THRING & CO., 36 SACKVILLE STREET, LONDON, W.,

have a large number of **GIRLS' SCHOOLS** on the books of their Transfer Department, but **ISSUE NO LIST.** On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her. The following are examples of the Schools now on their books:—

No. **TRANSFER** of old-established Middle-class Boarding and Day School near London. 88 Girls. Gross receipts about £1,000. Rent £112. About £250 required.

No. **TRANSFER** or **PARTNERSHIP**. Boarding and Day School of the highest class, in the West End of London. Old-established, and giving a very good return. £800 to £1,000 capital required.

No. **TRANSFER** or **PARTNERSHIP**. High-class Girls' School in healthy Suburb of London. Accommodation for several more Boarders. Very little capital required. Percentage of receipts term by term accepted for goodwill.

No. **TRANSFER** of Boarding and Day School 5,379. in a healthy suburb of London. 41 Girls, of whom 5 are Boarders. Gross receipts about £1,600. Very moderate sum accepted for goodwill.

No. **TRANSFER** of well-established and successful Day School of the highest class, in one of the best parts of **THE WEST END OF LONDON**. Principal retiring for personal reasons. Only £500 Capital required. Part of this might be left over.

No. **TRANSFER** of exceedingly flourishing 5,375. Boarding and Day School in the Southern Midlands. Gross receipts over £3,000. **NET**

PROFIT ABOUT £1,000. 70 Boarders and 30 Day Girls. Very suitable for two ladies to take over in Partnership.

No. **TRANSFER** of old established and successful Boarding and Day Private School for gentlemen's daughters, in the West of England. Between 60 and 70 girls, 20 of them Boarders paying up to 54 guineas per annum. **GOOD PREMISES**, standing in 3 acres of grounds. Only £500 required for goodwill.

No. **TRANSFER** of old-established and successful Boarding and Day School in a healthy residential locality near London. 49 girls. Gross receipts for the last year £2,790. Net profit £800. House stands in 4 acres of grounds.

No. **PARTNERSHIP** in one of the best-known Finishing Schools, of the highest class, near London. Between 40 and 50 girls. Fees up to 120 guineas. **MAGNIFICENT PREMISES**, standing in 36 acres. Partner need not invest more than £1,000.

No. **TRANSFER** or **PARTNERSHIP**, with a view to Succession. **SMALL HIGH-CLASS FINISHING SCHOOL**, close to London, in a fine house, with over 3 acres of beautiful Grounds. Accommodation for 24 Boarders; at present contains 10. Suitable for a lady **WISHING TO MOVE**, or with a **GOOD CONNEXION**.

No. **PARTNERSHIP**, suitable for a **WELL-QUALIFIED MISTRESS**, in Boarding School at **EXCEPTIONALLY BEAUTIFUL SPOT** on the South Coast. 35 Boarders. Prospectus fees 90 guineas per annum, many paying considerably more. From a well qualified partner, especially with a little general connexion, **LARGE CAPITAL NOT REQUIRED**.

No. **TRANSFER** of first-rate Boarding School 5,346. of highest class, near London. Magnificent premises. Over 40 Girls. Gross receipts about £6,000. About £1,500 necessary to negotiate.

No. **TRANSFER** of very flourishing School, for the daughters of gentlemen, in a healthy suburb of London. About 70 Girls, chiefly Day Girls. Gross receipts nearly £3,000. Net profit about £1,200. Exceedingly good premises.

No. **TRANSFER** or **PARTNERSHIP**. Old-established Boarding and Day School in Sussex. 20 Boarders and 15 Day Girls. Goodwill about £500.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require **full particulars before** arranging introductions to their clients. No charge is made to Purchasers.

GEOMETRY SCHEDULE—CAMBRIDGE LOCAL EXAMINATIONS.

THEORETICAL AND PRACTICAL GEOMETRY. By F. H. PEACHELL, M.A., and F. MARSHALL, M.A.

A Treatise on Geometry in accordance with the Schedule issued by the Cambridge Local Syndicate, with Specimen Papers. 168 pp. Crown 8vo, cloth 1 6

READY SEPTEMBER 25.

ATLAS and NOTES on EUROPEAN HISTORY. By J. HARTLEY FUDGE, M.A. From the times of Diocletian to the commencement of the present European War. 104 pp. 36 Coloured Maps. Crown 8vo 1 0

NOW READY.

The Senate Edition.

"La Guerre," Vol. II. A French Reader, compiled from articles upon the European War selected from the leading French Newspapers. With Notes on Idioms by TAYLOR DYSON, M.A. 10d.

The subject matter of this Reader, from its retaining interest, leads the student unconsciously to a better knowledge of modern French construction. Many of the articles are of a conversational nature, and of the greatest value as supplying a means of acquiring a fuller vocabulary and a better knowledge of the subtleties of the language. Volume I is in use at all the great Public Schools.

Parts I and II (together) ...	3s	2s 6d
Part III ...	2s	1s 6d
Exercises separately ...	3s	2s 6d

"One of the best Arithmetic books we have seen. The type is excellent, conforming, as it does, to the standards laid down by the British Association Committee. ... Free use is made of concrete examples, and the treatment, which is careful and sound without being laboured, should appeal to all."—*Times*.

"This is one of the best Arithmetic books we have seen. ... We believe that most teachers will welcome the prominence given to questions on Area and Volume and to 'Unitary Method.' ... A special feature of the book is the excellent printing. We recommend the book to the notice of all teachers, and feel confident that it will have a very wide circulation."—*The A. M. A.*

OCCASIONAL NOTES.

THE resignation of Mr. Arthur Henderson from the office of President of the Board of Education was marked by few expressions of surprise or regret. His appointment was known to be temporary, and nobody expected him to play any part in developing our educational system. His chief work has been connected with labour questions, and as the nominal head of another department he will continue to do the same work, and to merit approval as the unofficial Minister for Labour in the Cabinet. His successor at the Board is the Marquis of Crewe, who will bring to the work a mind imbued with scholarly feeling, personal and inherited, together with the experience of a President of the Imperial College of Science and Technology. Some doubt may be felt as to whether Lord Crewe will be able to devote the necessary time to the work of his new department. He has acted as understudy for the Foreign Secretary, and is the spokesman of the Cabinet in the House of Lords. These duties will absorb much of his time, and must hinder him in the task of learning the intricacies of our educational administration. The appointment has been criticized on these grounds, but we are content to wait until the new President has had time to show what he intends to do in the direction of providing for such modifications of the existing system as will meet our needs after the War.

IN several quarters it has been urged that the Minister of Education should be chosen from outside the political circle. Mr. T. E. Page, who may be counted as one of the "Times" experts, comes forward with a magnanimous suggestion relating to a head master whom he does not name. Some names have been mentioned, includ-

ing those of Dr. Sadler, Sir Henry Miers, Dr. H. A. L. Fisher, and Prof. Gilbert Murray. It is no disparagement of the educational and administrative qualifications of these distinguished teachers to point out that the post of Minister of Education involves political obligations of a rigorous character. Under the party system it is inevitable that the head of a Department of State should have a seat in Parliament and be attached to the party in power. Under these conditions the most brilliant "expert" in education would be greatly restricted in his work. Probably the best service that he can render would be given through the medium of a standing committee, and it has been suggested that there should be instituted a real Board of Education. This body would have the President at its head, but would be made up of persons having special knowledge of educational administration and of teaching. We welcome these proposals, not as fulfilling all our requirements, but as evidence that public interest is at last being aroused.

MR. WILLIAM ARCHER has intervened in the controversy between science and the classics, and expressed his entire sympathy with "the intrepid persons who are bearding the Head Masters' Conference in its den." We need no convincing that, in the education of the future, science must play a far larger part than Latin and Greek, but he does well to remind us that the reform which this admission implies is urged not merely on utilitarian grounds to enable us to get the better of Germany in war and in the commercial struggle that must follow war. Yet it is a sad confession that the author of *If Youth but Knew* makes when he tells us that the best method of teaching science as a revelation of the divine purpose has yet to be discovered, and, when he asserts as a corollary that we must take refuge in history "as the science of man," we cannot follow him. "Every intelligent human being is accessible to the revelation of science, while comparatively few have an inborn taste for letters." Therefore, he argues, literature should be reserved for the chosen few, and history be recognized as the basis of all learning. This is not in accordance with our experience as teachers. Legend, myth, the ballad, or romance—Joseph and his brethren, the wanderings of Ulysses, Horatius, Robin Hood—appeal to all, and it is as literature rather than as history that they appeal. Literature is no more "a department of history" than is science, and it needs no knowledge of history to appreciate the *Odyssey* or the *Morte d'Arthur*.

THE War has broken down more than one ancient prejudice, and it may yet have great results in the sphere of education. Here is a notable hint from the Report of the Board of Education. Some of the elementary schools which have been expelled from their buildings for half a day have found considerable compensating advantages. More home-work can be done, and the teachers have more time for the correction of it. That means that the children do more work by themselves and less under the teacher's eye—surely no small gain. Then the half-day out of school is often used for games, physical exercises, swimming, open-air work, excursions, visits to museums and galleries, needlework parties, and the like. In fact, the teachers are discovering how much there is to be done for the child outside the school building. The boys and girls are living a wider and fuller

life. They may be learning less, though that is not certain, because we do not know what is the number of hours a child can spend in classroom work with the greatest profit to himself. It may quite well be that for young children at least three hours are as good as five, and on this most important point we hope we shall get some light in the Board's next report. One head master says he would like to continue the half-time plan after the War is over. We hope he will be given every facility for his experiment.

THE key-note of the experiments in elementary schools described at the Oxford Conference on New Ideals in Education was the substitution of life and activity for learning in the case of young children.

Educational Experiments.

Mr. Arrowsmith, who carries on an ordinary elementary school on the moors of Yorkshire, conducts his infant school like a big home. The little ones spend most of their time in such occupations as dressing dolls, looking after the school pets, of which there are sixty-three, cleaning and washing up (for they have dinner at the school), working in various material, and drawing. All work is done independently, for Mr. Arrowsmith strongly condemns mass-teaching. In the upper school the whole morning is given up to occupations and the afternoons to literature, which includes all sorts of readings, art, music, and rambles. Everything needed by the school that is within the power of the children to construct is made by them, and the older children make things for the little ones—an admirable and most practical training in helpfulness, worth many days of book reading. At the Caldecott Community, a small school carried on in St. Pancras by some devoted ladies, there is no syllabus and no organization of lessons, but children work at what they please. It had to be admitted, however, that occasionally gentle pressure was necessary to prevent a child doing nothing but one thing, as in the case of the boy who for two years showed no desire to do anything but draw. Besides, there are several teachers for the fifty-seven children in the school.

MR. ARROWSMITH'S curriculum seems to us very suitable for schools in poor neighbourhoods, but for the better elementary schools it would be clearly inadequate. But with his central principle, that schools should be places of

Life and Learning.

social life as well as of learning, we have every sympathy. It is a principle which is universally recognized in secondary education. In many boarding schools, indeed, it is carried to an extreme, and social life and games tend to swamp learning. But the principle itself is sound, and if it is needed for the children of the well-to-do people, how much more for those of the poorer classes! Much is being done in the elementary schools in this direction. Organized games, school societies, scouting, visits to places of interest, school journeys, and school camps are all recognitions of the great truth that children must live as well as learn. It is doubtful whether much more can be done for life without sacrificing some of the learning, and one of the great questions of the day is whether that sacrifice ought to be made. It seems at least clear that the worst enemy of the elementary schools is the man who wishes to introduce new subjects into the curriculum. Some ask for military drill, others for French; the answer to both parties ought to be that the demands on the learning

capacity of the child are already sufficient, and that he needs more time to live.

AT the same Conference Sir Henry Miers expounded a simple program of science teaching. In elementary schools he would restrict it to simple knowledge of common objects and physical environment. For secondary schools he asked for a systematic course of experimental work, preferably in physics, during the first year or two. After the age of bifurcation, such detailed study would be pursued on the modern side only. It would be enough for the classicist if he studied the general principles of science and read some books on the history of science and recent advances in scientific knowledge. Mr. Pye, the Science Master at Winchester College, on the other hand, thought that from fifteen and a half onwards was the right time for training in experimental scientific method. This, according to the information collected some years ago by a Committee of the British Association, corresponds with the general practice of schools, but the reason for thus deferring chemistry and physics is surely not, as Mr. Pye thought, that the sense of causality is insufficiently developed before that age, but that the subject-matter is too recondite for younger children. Anyhow, it is clear that the question to be settled is at what stage systematic training in scientific method is to begin. Practical considerations suggest that it should come early, before the age of specialization; psychological considerations, that it should come late.

PSYCHOLOGICAL formulae are always dangerous, because mental phenomena are far too complicated and subtle to be reduced to formulae. We are, therefore,

Attention and Interest.

not satisfied with the argument used in the same discussion by Sir Henry Miers in combating Mr. Pye's view that Latin is a more potent instrument than science for developing the power of mental concentration. What he said was that science was more interesting than Latin, and that mental concentration resulted from interest. But surely this is only one side of the truth. If it is true that interest always results in attention, it is equally true that interest is not the sole possible motive for attention, if by "interest" is meant the intrinsic interest of the subject before the mind. Every one has daily proof of this. All of us are constantly fixing our thoughts for considerable periods on matters in which we feel no particular interest, simply because they come within the scope of our business or our duty. And the faculty to do this is one of those which we specially want school work to develop, for it is one of the capacities which distinguish the educated from the uneducated man. As it is with adults, so it is in a minor degree with all but quite young children. Boys and girls in subjects they dislike can do very good work from a feeling of duty or from an enlightened sense of self-interest, from deference to authority or from mere fear of disgrace and punishment. Taught without proper qualification, the doctrine of the motivation of attention by interest may do much harm in the training of teachers. Students should not be allowed to think that the child's interest in his tasks is the one motive which can induce him to give his mind to it. Into the question whether scientific or linguistic study gives better practice in mental concentration we do not propose to enter, but we are sure that it is a much more complicated one than Sir Henry Miers supposes.

THE Government, in their scheme of Committees, do not appear to have made any arrangement for the consideration of the dovetailing of elementary and higher education. Yet this is a vital matter, and one which demands comprehensive treatment. There seem to be two policies in the field, but perhaps they are not necessarily incompatible. The one aims at fortifying the top of the elementary school and permitting children to remain there till sixteen—which, by the way, is already possible with the consent of the Local Authority. Lord Sheffield, for instance, in his recent address to the National Education Association, urged that parents should have the right to keep their children in “the popular school” till sixteen at least. But wherever these children were few in numbers—and in most places they would be few—this would be very bad economy. A considerable fraction of the boys and girls in elementary schools, including most of the brightest, already pass on to the secondary schools at eleven. This points rather to the alternative policy of bringing elementary education to a close at eleven or twelve and drafting the pupils at that age to secondary, trade, and junior technical schools. The top of the elementary school is, in the towns at least, a crumbling edifice, and it would be a false policy to attempt to reconstruct it. It will still be necessary to preserve it in rural districts and in areas where the half-time system prevails, and here there may be scope for those supplementary classes on the Scotch model by which Lord Sheffield sets so much store.

The Scheme of Schools.

THE Consultative Committee in their Interim Report on Scholarships for Higher Education just touch the fringe of the question of higher commercial education.

We wish that they had gone more fully into the subject, for it is an important one. Hitherto, we English people have turned up our noses at commerce as a branch of learning. We have regarded it as a subject which can be picked up by the young business man as he goes along, and which is far beneath the dignity of the University student. Faculties of Commerce have been established at some of the newer Universities, but they are not very flourishing. We have no great commercial colleges of University rank such as the six *Handelshochschulen* which have been founded in Germany during the last twenty years. Of these Cologne has—or, at least, had in 1913—five hundred students. The study of modern languages is an essential branch of a higher commercial education; but, as the Interim Report points out, our Universities offer very few scholarships in these languages, though, curiously enough, they make no recommendation for increasing their number. Nor do they even offer the instruction that the *Handelshochschulen* supply. Cologne gives instruction, not in a beggarly half-dozen, but in seventeen tongues spoken amongst civilized men. There is no institution in England where so many European languages are studied. The provision for the higher study of commerce in Germany is due to the German business man's belief in education. The commercial colleges were founded, not by the State governments, but by the local Chambers of Commerce. In England Chambers of Commerce have done nothing for education beyond instituting examinations.

The Higher Study of Commerce.

SINCE the above note was written it has been announced in the press that a mission to business men

has been undertaken by Mr. A. L. Smith, Master of Balliol; Dr. Sadler, the Vice-Chancellor of Leeds; Mr. A. E. Zimmern; and Mr. J. M. MacTavish, the General Secretary of the Workers' Educational Association. They have been holding Conferences with Chambers of Commerce in the great towns of the West Riding. The reforms which they urge are stated to be the improvement of the elementary schools and a great reduction in the size of classes, the establishment of day continuation schools, the development of the teaching of science, greater attention in school to social life and ethics and to physical training, and, finally, the function of education as a softening influence in the antagonism of labour and capital. We wish the distinguished educationists success in their pilgrimage. There is scarcely anything that is more important for the future of education than the conversion of the business man. If he can be induced to see that teaching is a “vital industry” necessary to the prosperity of other vital industries, much will have been gained. We are glad to learn that the results of the mission have so far been full of encouragement.

IN the July number of *Modern Language Teaching*

Mr. F. B. Kirkman sets forth a moderate view of the question of translation in the teaching of foreign languages. He recognizes the impossibility

Translation.

of its complete extension, and considers that the extent to which it is necessary as a means of interpretation is a question for each individual teacher. But he holds firmly to the view that there is a conscious difference of aim between the adherents of the old and new methods, the object of the first being to create the habit of mental translation, that of the second to form the habit of understanding without translating. But surely the learner may reach the goal of reading by direct association by passing through the stage of translation, and as a matter of fact it is by means of translation that most of us learnt to read foreign books without translation. Translation was a ladder which we threw away when it was no longer needed. If the matter is looked at from this point of view, the object of the old teacher and the new are seen to be the same. The use of the two methods simultaneously, the one for easy reading, the other for difficult work, Mr. Kirkman does not discuss, but it is a very important point. A class might be able to apprehend the meaning of a simple French story by merely reading it in French, but might be quite at sea were a French classic in front of it. Thinking in a foreign language has its limits for most of us, even for teachers. Mr. Kirkman sighs for the time when science will be able to tell us exactly how much a pupil translates mentally. Pending that happy event, could he not in his investigations begin with the teachers?

A COUNCIL to help education, in which the five associations of head and assistant masters and mistresses have shown their faith by subscribing liberally to its funds, ought to be supported by every teacher. During the two years of the War the Professional Classes War Relief Council has spent nearly £8,000 in assisting parents impoverished by the War to continue the education of their children. For, though the community in general seems very prosperous, many classes have been hard hit by the War, amongst them especially architects, artists, writers, stockbrokers, and other pro-

Professional Classes War Relief Council.

professional men. The money that helps to meet the school fees of the children pays a double debt, for it helps to keep the school as well as the pupil going. Private-school masters, it ought to be added, have shown much generosity in taking pupils at reduced rates. In many cases, too, the Council has arranged for hospitality in the holidays. Nor is this the Council's only work. Numbers of British teachers came home from Germany and Austria at the beginning of the war, some of whom had lost all their savings, many governesses in families which found retrenchment necessary were thrown out of work, and many teachers of art and music found their occupation gone. Numbers of these have been assisted to find other work. With the other, doubtless equally laudable, activities of the organization this journal is not concerned, but its educational work we have no hesitation in commending to our readers. The Council is greatly in need of funds. Its address is 13 and 14 Prince's Gate, W., the princely mansion lent by Mr. J. Pierpont Morgan.

THE Board of Education decided to hold a special inquiry into the circumstances attending the resignation of Miss Mercier and her nine colleagues from the City of Leeds Training College. The Commissioners were Mr. H. W. Orange, Accountant-General; Mr. F. H. B. Dale, H.M. Chief Inspector; and Miss Wark, H.M. Inspector. The inquiry began on August 15 at Leeds and was held in private. The Board's opinion will be made public in due course, but no report of the proceedings will be published. We heartily approve the Board's decision to hold an inquiry. Whatever the verdict may be, we shall hope that the Leeds case will serve to remind those concerned in educational administration that teachers are not to be treated like naughty children and lectured indiscriminately. We hope that the Board's report will embody some conclusions on the general management of training colleges. It is well known that some of these institutions maintain a system of discipline and an intellectual routine which is far removed from the enlightening experience which should form the chief part of a teacher's preparation for school work.

IT has recently been announced that on May 27 last the Council of Bedford College for Women passed a resolution terminating the appointment of Miss E. N. Thomas, D.Sc., as Head of the Botanical Department. This resolution is before us as we write, and its wording fills us with surprise. At this stage we refrain from giving its content. It is enough to say that such a resolution would be justified only where gross incompetence or positive wrongdoing had been fully established. But no suggestion of either is made, and we do not wonder that the Senate of the University of London has agreed to hold an inquiry into the conditions and tenure of appointments at Bedford College. Three memorials requested action: one signed by members of the Academic Board of the College, another by appointed and Recognized Teachers in the University, and a third by distinguished botanists. The matter cannot be left as at present, and we are inclined to think that the time has come for abolishing the practice of terminable appointments, save for admittedly junior posts. The technical device of reappointment may lead to grave injustice.

LOCAL AUTHORITIES.

Vocational Training. OF the many questions which will engage the Authorities after the War, that of vocational education is of special importance. How far is it practicable—or, if practicable, expedient—so to organize educational opportunities that "all the children of all the people" may be adequately prepared for their life work? One of the difficulties appears to be that a scheme of vocational training, which, limited in its application, is appropriate and useful, may be extremely disappointing if extended. Moreover, the question is one which can be considered only in direct connexion with industries and employments. In the United States, where special attention is now paid to these educational developments, there has been a disposition to re-examine seriously the basis of supposed facts upon which vocational schools and courses have been built. A new note has been struck, writes an observer, in the recognition of the "futility of training a boy or girl for a place that does not await him." The new point of view is characterized by keen interest in questions of supply and demand in the labour market and by intensive study and analysis of occupations and a more careful inventory and analysis of existing educational facilities.

Gower's Walk School. IN a recent issue of *The School Guardian* attention was directed to the extremely interesting work done at the Gower's Walk School, Whitechapel, founded in the early part of last century. The feature of the school is that the boys attending it are taught a trade, viz. that of printing. Employers, it is stated, are continually applying for boys for their printing works, and no firms have ever asked for the payment of premiums when boys leave school. They have taken them knowing full well that the boys, after their four years' practical training in the school, were capable and thoroughly conversant with the elementary principles and practice of the trade. The cry of the printing-houses (and most of them come from the City) is, "Send us more boys, and more." It is suggested that the good work of this school should give much food for thought to all persons who are seriously meditating on the question of reforms in our educational system after the War.

Training Tradesmen. THE pious founder of Gower's Walk School established an institution which has unquestionably done excellent work, and is an example of what is possible. But it is doubtful whether its success can be regarded as suggesting the best direction for future developments on a national basis. Here and there a school with the definite object of training children for a particular trade may be advantageous. But the subdivision of employments and industries is such that the only practicable method of preparing "all the children of all the people" for their life work is to keep to the highway of general principles, and not to be lured into the byways. One of the lessons brought home to us by the War is that intelligent men and women who are willing can, with a very brief period of "intensive training," speedily acquire the skill to perform accurately and expeditiously a considerable number of so-called technical operations. The education of children, up to the age of fourteen at any rate, should aim at the development of general, and not special, qualities and aptitudes.

The "Blind-alley" Job. THERE is a tendency in the United States, it appears, toward raising the age at which young people enter profitable employment. The term, "blind-alley job," it is said, persists in educational discussion, just as the thing itself persists in real life, and probably will persist for an indefinite time to come. It is coming to be recognized, however, that even the blind-alley job is not an unmitigated evil, especially if its character is clearly understood by the worker and by society.

School and Workshop. IF it may be suggested that it would be a calamity to attempt as a general policy the introduction of vocational training in elementary schools, there ought to be a much better understanding between the employer and the schoolmaster. It might also be a statutory condition that a child should not leave school until suitably employed, and under certain circumstances the child might be required to continue school attendance for part time. Suppose, for instance, we revised our ideas as to the duration of the period necessary for the preparatory training of the worker and the citizen, and advanced it from thirteen or fourteen to sixteen, we might then determine that the preparatory training up to that age must be obtained either in schools or workshops or both.

SCIENCE NOTES.

THE meeting of the British Association will take place this year at Newcastle from September 5-9. As at Manchester last year, there will be no social festivities, but it is hoped that the business of the meeting will thoroughly justify the decision not to break

British Association at Newcastle.

the continuity of this important annual assembly of men of science. Sir Arthur Evans, the President-Elect, will deliver his address on Tuesday evening. The usual pair of evening discourses will be delivered in the Town Hall, Prof. W. A. Bonelecturing on "Flame and Flameless Combustion," and Dr. P. Chalmers Mitchell on "Evolution and the War." Lectures to the public will be given in Newcastle, Sunderland, Durham, and Ashington. The plan of offering to students and teachers of the district Associate's tickets at a reduced fee proved helpful last year, especially to the Educational Section, and will be followed again this year.

A COLLECTION of British-made laboratory apparatus is now on view at the Institute of Chemistry, 30 Russell Square, W.C. The exhibition will probably remain open until the end of September. The

Exhibition in London.

apparatus is not confined to the instruments suited for school use; but should be none the less of interest and utility to science teachers.

CORRESPONDENCE in the daily press illustrates the prevailing ignorance of the educated public with regard to the relation between clock time and the movements of the sun. Originally the abbreviations

A.M. and P.M.

for *ante* and *post meridiem* doubtless referred to times before and after the southing of the sun. Since clocks and watches came into general use, A.M. and P.M. have referred to clock time, and summer-time regulations have made no change in this respect. Before the introduction of the system popularly called "Daylight Saving," the clock and the sun were in agreement four times in the year—on April 15, June 15, August 31, and December 24. On these dates the equation of time is zero; the sun souths when the clock is at the hour of twelve. On all other days the clock is before or behind the sun, the difference sometimes exceeding a quarter of an hour. During summer-time the clock is, of course, an hour earlier with reference to the sun, or 60 minutes might be added to the equation of time. On the last day of August the centre of the sun crossed the meridian at 1 p.m.

NEWS has been received from Kashmir that Mr. Evershed has photographed the highest eruptive prominence yet recorded. The outburst reached a distance

Record Solar Prominence.

from the sun's limb rather greater than the radius, or roughly, 450,000 miles. According to the *Observatory*, the velocity away from the sun was 190 km. per second. Photographs were obtained at intervals from the beginning until the outburst was past the maximum. Some day we shall see the "Life of a Solar Prominence" filmed—like Cabinet meetings and other transient terrestrial phenomena—for the kinema.

DURING the past month there have appeared many press tributes to the memory of the most original and successful among the British chemists of our generation.

Sir William Ramsay.

We say British advisedly because Ramsay's work was essentially of the type in which Britain has more than held her own in the history of discovery—work characterized by bold innovation and epochal in its results, leading to a new era in chemical philosophy. His joint discovery with Lord Rayleigh of an inert gas in the atmosphere met with world-wide recognition. Yet this was but the beginning. The discovery of terrestrial helium in the mineral cleveite gave him the key which unlocked the mystery of atomic structure and of the periodicity of the elements. After helium followed neon, krypton, and xenon. During the next seven years the discoveries of Röntgen, Henri Becquerel, M. and Mme Curie, J. J. Thomson, and Rutherford gave to science new methods of analysing matter and the concepts of α and β rays. Then, in the year 1903, in his private laboratory at University College, Ramsay showed the genesis of helium from radium. Be it remembered that only a small fraction of a cubic millimetre of the gas can thus be obtained at a time. By his discovery of the argon and helium family of elements, Ramsay had made a notable contribution to chemistry; but his insight in placing them in the Periodic Table as forming a group of zero valency can only be compared to the discovery of the use of zero in arithmetical notation. Greatest feat of all was his proof of the natural transmutation of the radioactive elements into simpler elements and helium.

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

We love the Boy Scout, as we have said before, for his picturesque-ness, and we have faith in the disciplinary power of Scouting. It is not long since we wrote about the progress of the movement in the United

Of Boy Scouts.

States. We learn now that the Boy Scouts of America have been incorporated by Act of Congress with the exclusive right to the use of the name. There are 182,000 boys and 42,000 adults enrolled in the organization.

The campaign for "preparedness" in the United States is accompanied by efforts to introduce military drill into schools. Thus a sub-Committee of the Chicago

Military Drill in Schools.

Board of Education has unanimously recommended the following program of military drill for the high schools: During the first and second years, setting-up exercises, instruction in the school of the soldier, without arms, instruction in the elements which produce efficiency in military organization, instruction in the school of the squad, definition of all military terms used; third and fourth years, instruction in the school of the company, instruction in the school of the battalion, definition of military terms used, drills and exercises, military sports and athletics. The *School Review* (XXIV, 6) regrets that there is no proposal to provide rifles or the strenuous training of camp life. "Any serious preparation," says the writer, "which pretends to prepare young men for war must teach them to shoot and to endure hardships. Probably not one eighteen-year-old boy out of twenty-five in Chicago ever had a gun in his hands or slept in a tent. Either go the limit or keep out entirely." Aware that our readers are divided in opinion upon this subject, we call attention to the matter as of much importance. America will be strongest when Europe is weakest.

A noteworthy feature of American pedagogy in the present day —England has nothing like it to show—is the endeavour to obtain exact measures for all educational results. To test handwriting or spelling

Measurement.

—a scientific scale. To compare two schools or to estimate a school system—an elaborate display of graphs. Part I of the fifteenth *Yearbook* of the National Society for the Study of Education is the Report for 1916 of the Committee of the National Council of Education on Standards and Tests for the Measurement of the Efficiency of Schools and School Systems. It contains fifteen papers by different contributors classified under the two heads of (i) Educational Scales and Units of Measurement, and (ii) the Application of such Scales and Units in Educational Supervision and Administration. A general introduction calls attention to the evidence presented by the contents of the Report in favour of the use of the more precise methods of educational measurement recently developed. It is pointed out that those interested in the improvement of schools have always attempted by some process or other to estimate the efficiency of individual schools or groups of schools. The principal test, however, as to efficiency and as to the progress of pupils has been in the past, as it still largely is at present, the often-condemned examination. It is hoped that the new measures will yield results more precise than examinations yield, and will improve the methods both of instruction and administration.

Tuskegee, Alabama, is the Mecca of the Negro World. Booker T. Washington (whose death was dealt with at its time in the daily newspapers, and therefore

At Tuskegee.

not by us) has been succeeded as Principal of the Tuskegee Institute by Robert Rossa Moton, whose installation address was a vigorous appeal for effort. "While the outlook was never more hopeful," he said, "the Negro problem is not yet solved. While there is great encouragement in the fact that seventy per cent. of the Negro population can read and write, it is not safe to assume that seventy per cent. of the Negroes are really and truly educated. Our progress in this country has been wonderful, and we have every reason for rejoicing; but shiftlessness, disease, inefficiency, and crime are still too prevalent among our people." "The Meaning of Tuskegee" is the heading of an article in the *New England Journal of Education* (LXXXIV, 1). To the Institute there come many with the age and bodies of men and women, with the intellect of children, yet without the tastes and interests of childhood. Tuskegee sets them appropriate and stimulating tasks, puts high ideals before them, and teaches them how by thoroughness and high achievement they may overcome the prejudice that their colour evokes.

FRANCE.

The *Revue Pédagogique* (LXVIII, 6) prints an opportune and suggestive article by M. E. Rocheron, Assistant Inspector of Manual Work, having the rubric "Du rôle de l'école dans la rénovation de l'apprentissage." He considers the attitude that the School must assume after the War towards the economic life of the State. In every rank of workers there will be gaps to be filled and training must be ready for those who are to fill them. It has long been debated whether apprentices should be trained in the workshop or in the school, whether employers or educators should undertake their training. Here, as in other matters, there must henceforth be the *union sacrée*, and all agencies must unite to form the labourer that the State requires. What can the school do? What has the school been doing?

The lower elementary school, with pupils of from six to twelve years of age, says M. Rocheron, very justly, must be in no sense vocational. Even in districts where the vocation of the child can be clearly foreseen, the business of teachers is with his physical, moral, and intellectual development. It is to the elementary school that Paul Bert's words relate: "Nous croyons qu'on ne doit sortir de l'école, ni serrurier, ni vigneron." Manual work is included in its program for educational purposes—to promote the general development of all the children. But it yields a useful training for those who are to become apprentices, which is often designated by the name of *préapprentissage*. Co-ordinated with drawing and geometry, manual training forms, as it were, a basis of apprenticeship to many trades.

How is the transition from school to a trade to be facilitated?

An Expedient at Paris.

Paris has solved the problem by means of *cours d'apprentis*, courses introductory to apprenticeship, at present conducted in seven of its schools. To each course may be admitted thirty pupils who have chosen a definite vocation, such as that of an engine-fitter, a carpenter, or a cabinet-maker. They spend the greater part of the day (5 hours) in a school workshop; the rest of the time is occupied with lessons in technology, mechanical drawing, or mathematics (in all 10 hours a week), or with the subjects of general education, such as French and science (in all 8 hours a week). These boys of thirteen or fourteen are in a workshop so far as the processes of work, the tools used, the production of marketable objects, are concerned; they are at school as being under a teacher who explains each operation. Places are easily found for them at good salaries after a year's preparation.

Again, for actual apprentices there have been at Paris for twenty years in the primary schools thirty *cours techniques d'apprentis*. At first these were held in the evenings. But that threw too great a burden on the lads, and by agreement with the employers many of the courses are now given during the working day. Hence the name *cours de demi-temps*. Similar arrangements prevail at Nancy, Albi, and elsewhere. Higher than these "half-time courses" are the *cours techniques de perfectionnement*, not for apprentices only, but for all young workmen who seek to carry on their technical studies.

It is not enough, however, to provide instruction; there must be pupils to receive it. More than once in France within late years it has been proposed to raise the age of obligatory school attendance to fourteen, and to give the supplementary year to *préapprentissage*, or, as we should say, generalized vocational instruction. But Continuation—be it from the age of thirteen or of fourteen—should it be compulsory? M. Rocheron has a set-off to every objection. "In free France compulsion has always been unpopular." Yes, but every law is a restraint on individual liberty, and the welfare of the State is supreme. "The obligation to attend even a primary school is not strictly enforced." Suppose that 10 per cent. escape the primary school, and that the same proportion escaped the continuation school, then instead of as now 700,000 out of the 850,000 between fourteen and eighteen years of age there would be only 85,000 not under school instruction. "The cost would be enormous." No expense is too great if it increases the intellectual, moral, and economic value of the individual and adds to the civilization of a people.

We have summarized the French article partly because many believe that obligatory Continuation is some German thing, to be abhorred. But to another theme. The contentious business (*Affaires contentieuses et disciplinaires*) of the Conseil supérieur throws light on the working of the educational machine in

France. A recent case shows us the cantankerous teacher. Appointed *professeur-adjoint* at a certain *lycée*, M. R. straightway protested against the service imposed on him, wrote an offensive letter to his head master, and exhibited frequent signs of ill will towards him. *He had filled thirty-five posts in thirty-one years.* The local committee, it would seem, decided to get rid of him; the committee's sentence was confirmed by the Conseil supérieur. A student of Toulouse University was indignant because he was examined in applied mechanics by a single examiner, the examiners having met only to deliberate and agree on the final results. The Conseil supérieur proved deaf to his appeal. Another student of Toulouse disputed the impartiality of an examiner, and even used threats towards him. The Conseil supérieur approved the University's decision to exclude the offender from the University of Toulouse altogether and from every French University for a year. A certain head master of a private boarding school at Rouen was imprisoned two months for ill-treating his pupils and because the moral atmosphere of his school was infamously bad. The Conseil supérieur pronounced finally on his case. He will teach no more in France, but we may get him.

The lists "Morts au champ d'honneur" and "Morts de leurs blessures" are still long, still record names of men prominent in education. During recent months educational France has sustained also some notable losses in the common way of death. In April died Charles Dejob, Honorary Professor at the Sorbonne, formerly of the Collège Stanislas, as eminent for pedagogic zeal as for erudition. Jules Sévrette, who passed on May 16 at the age of eighty-five, was an Anglicist who taught at the famous Lycée Louis-le-Grand. On June 16, death carried off Victor Delbos, Professor in the Faculty of Letters at Paris and Member of the Academy of Moral Sciences, a teacher beloved of many pupils in Toulouse and Paris. His work in Philosophy was important. It was but lately that he wrote a luminous tract: *Une théorie allemande de la culture: W. Ostwald et sa philosophie*. Catholic France has to mourn Paul Martin, Head Master of the celebrated École des Frères-Bourgeois, where he spent more than half a century of his life. State and "free" teachers have been demonstrating equally their love towards France. Unfortunate these in dying before they could witness her final victory!

UNION OF SOUTH AFRICA.

There is issued from Pretoria by the National Advisory Board for Technical Education an admirable brochure with the title *Suggestions to Teachers*. The suggestions refer principally to instruction in civics, languages, mathematics, and housewifery. Of the section "Civics" it is not extravagant to say that it has quite rare scope and value. A syllabus is outlined covering all the imperial and internal relations of the South African State and its four Provinces. We venture to recommend a study of this paper to Germans. Germany, by her treatment of native populations, has shown herself unworthy to have colonies. Let us see what South Africa holds, and bids its teachers teach, upon the subject. Of domestic government we read this:—"The relations between the white and native races are handled by the Department of Native Affairs, whose work is of the utmost importance in its influence on the future of this country. Untactful and unwise action might easily produce an upheaval which would be a serious menace to the existence of the nation; further, the rate of increase of the non-white population is greater than that of the white, and the disproportion in numbers is therefore likely to increase. It is very desirable that the white population, however, should not look upon the work of the Department merely as an agency for keeping the non-European in a relatively inferior position; it must be recognized that the State owes a duty to its coloured inhabitants, a duty that must not be shirked through fear of the result of allowing them natural development in numbers, ability, and influence. Steps are being taken to accustom the natives gradually to the idea of representative government, and the previously existing tribal system is tending to disappear."

PROVINCE OF THE CAPE OF GOOD HOPE.

A supplementary Report dealing with the work of the Education Department for the nine months ended June 30, 1915, has been issued. Occasion is taken to review the whole period of Sir Thomas Muir's administration, and we are thus presented with a succinct account of educational progress in the last twenty-three years. The most out-

standing event in this period was the passing of the School Board Act, 1905, which gave the three essentials of a national system—the compulsory institution of School Boards, compulsory school attendance, and local rating for educational purposes. But there are other notable developments to be recorded. Thus, the Education Department has been reorganized, the whole system of training teachers has been revised, the number of schools equipped with school libraries has been increased a hundredfold, and, under the loan system, numerous and fit school buildings have been erected. "The constant aim of the Department," says the Report, "has been to create as a strong and organic growth a national system of education, rooted in the social fabric which it is both to serve and to mould." The services of Sir Thomas Muir in assisting to realize that aim are known to all who know anything of the Province of the Cape of Good Hope.

The Administrator of that Province, Sir Frederic de Waal, laid the foundation stone of the new Training School at Kimberley on June 5 in the present year. In his speech he dwelt on the question of language. Every child in South Africa was to be taught in the mother tongue up to the fourth standard; that was to say, during the period of primary education. Hence bilingual teachers were required, and the State was prepared to train them. Unilingual teachers who were too old to learn the second language would still be employed in suitable posts; but those who were not should essay to do so, lest the bilingual teachers should be preferred to them. The bilingual element for the service of the schools of the future was to be manufactured in training institutes. It had been decided to establish six new institutes of this sort, each of which would ultimately be able to take 150 or 160 pupils. South Africa had a difficult task before it, but it was grappling strongly with it. Of the six training schools contemplated, we learn that two (one at Paarl and one at Cradock) have been built. At Kimberley a practising school and a hostel are to be erected near the main building. One hundred and thirteen students already under training prove that the new buildings are needed.

THE BRITISH ACADEMY—CROMER GREEK PRIZE.

WITH the view of maintaining and encouraging the study of Greek, particularly among the young, in the national interest, Lord Cromer has founded an annual prize, to be administered by the British Academy, for the best essay on any subject connected with the language, history, art, literature, or philosophy of ancient Greece. The first annual prize of £40 will be awarded before the end of 1917, under the following rules:—(1) Competition is open to all British subjects of either sex who will be under twenty-six years of age on October 1, 1917. (2) Any such person desirous of competing must send in to the Secretary of the British Academy on or before December 1, 1916, the title of the subject proposed by him or her. The Academy may approve (with or without modification) or disapprove the subject; their decision will be intimated to the competitor as soon as possible. (3) Preference will be given, in approval of subjects proposed, to those which deal with aspects of the Greek genius and civilization of large and permanent significance over those which are of a minute or highly technical character. (4) Any essay already published, or already in competition for another prize of the same nature, will be inadmissible. (5) Essays of which the subject has been approved must be sent in to the Secretary of the Academy on or before October 1, 1917. They must be typed (or, if the author prefers, printed), and should have a note attached stating the main sources of information used. (6) It is recommended that the essays should not exceed twenty thousand words, exclusive of notes. Notes should not run to an excessive length. (7) The author of the essay to which the prize is awarded will be expected to publish it (within a reasonable time, and after any necessary revision), either separately, or in the journals or *Transactions* of a society approved by the Academy, or among the *Transactions* of the Academy. The Secretary of the Academy will supply on application, to any person qualified and desirous to compete, a list which has been drawn up of some typical subjects, for general guidance only, and without any suggestion that one or another of these subjects should be chosen, or that preference will be given to them over any other subject of a suitable nature. Communications should be addressed to the Secretary of the British Academy, Burlington House, Piccadilly, London, W.

THE YOUNG LADY FROM MARS.

I TOOK her for an American at first, partly because her dress was new, suitable, and becoming; partly because she was entering into ready conversation with all and sundry in the hotel drawing-room, without pause or embarrassment. Perhaps my interest in her was obvious, for after several rapid talks with others, she came direct to my corner. I did not attempt to avoid her, for I like Americans.

"Are you a teacher, I wonder?" she asked.

"I am on the staff of the Bunchester High School," I replied, with a dignity due only to the kudos of that establishment, and to no desire to rebuff an intelligent alien.

"Well, I wonder if you can tell me why I can't get work at one of your schools?"

I gasped. What responsibilities was she offering me before I had the least acquaintance? But she went on:

"Of course, you don't know the least thing about me, but I have ten telegrams from head mistresses to-night asking me to go and see them to-morrow, and if they all behave as did the one I saw this afternoon—"

She broke off with a wave of her hands. She was really attractive, and if Heads were wiring to her—

"Will you let me know a few points first?" said I. "Just your name and experience, and so forth."

"Indeed, yes," she cried. "I'm from Mars!" Breath simply left me. I never could stand the idea of a lunatic at large. But, without noticing my appalled expression, she went on quickly:—"And Professor Bodge, who brought me down to earth with his—I never can remember the name of the thing—something-scope, tells me that the only way in which women like myself can get a living here straight off is by teaching. I told him I knew nothing to teach, and he said that he had never discovered, in conversation with women who were earning salaries by teaching, that they knew anything either. He supposed they read books to the pupils, and I could do that and more: I could tell them something about another planet, and how people lived on it, and that there was nobody else in the world, so far as he knew, who could teach that. He said he would write to a firm of educational agents about me, and would tell them to circulate my name among their clients as 'recommended by Prof. Bodge.' I had better leave the explanation about Mars to him. Then arose a difficulty about my name, as we don't have names like yours in Mars, and I could not very well tell mine to a man—it wouldn't be at all the thing. At last I suggested 'Miss Mars,' and he said it would do beautifully.

"So he sent in the notice, and next day I got the first wire from a Head. She asked what I taught, and could I come to see her to-morrow? That was another difficulty. I asked the Professor what I was to say. 'I don't know what they do teach in girls' schools,' he said. 'But you must say something. When you see her, you can ask her what she wants you to teach, and then I'll find you some books about it. It can't matter much, for though I know they talk about all sorts of things they are teaching the girls, I never met a really nice girl from school who didn't tell me that she knew absolutely nothing. Look here!' and he picked up a paper and turned to the back page:—"Mistress wanted for general form subjects." That will just do. Wire her: "General form subjects, arrive twelve thirty, Mars," and there you are."

"There's another great difficulty, Professor," I said. "We don't have girls on Mars. What are they? I suppose if you teach a girl you must know something about it?" The Professor went rather pink. "As a scientist, I agree. But I thought you had been a girl once," he said. "Our girls grow up into women." He was getting quite red, and it did seem strange. "Never mind," said I quickly, "I'll ask the head mistress. She will know all about them, of course." "Of course," said the Professor, with a groan of relief. I

was puzzled and very curious. 'And I believe I've a book about them somewhere.'

"He gave me a book, *Girlhood and Womanhood*, or some such name. It quite absorbed me, and I grew enthusiastic over your strange (to me) scheme of life. The idea of tiny babies and children growing into men and women like us on Mars, and then becoming helpless old people, and the old and the young so dependent on the girl and the woman. It all seemed very sweet to me. And then nursing people in illnesses, and having houses to look after, and husbands to live with them. Evidently women are very important in this life of yours. I felt much attracted by the idea of helping them to prepare to do all these things.

"Well, the next day I went off, in the Professor's car, to see the lady. (To-day, of course, but your time arrangements are very confusing at first.) She was very nice, I thought, but rather old, and something about me seemed to surprise her from the first.

"So glad you were able to come. But I thought from Prof. Bodge's name that you would be prepared to teach Science.' And then she paused.

"I dare say I could,' I said. 'My great difficulty is that I have no previous experience of girls.'

"Oh! You have taught grown-up students, I suppose?"

"I have had experience of both men and women,' I murmured. And so I have. 'But I don't feel that I quite understand girls. However, if you would give me a few hints. For instance, when your girls grow up into women, what will they do?"

"Oh, er—well, perhaps half of them marry."

"Marry,' I observed, reflectively. I had noticed this in the book the Professor lent me. 'Then they will have children—little helpless things—to look after for a long time, won't they?"

"Yes, but they don't all marry,' she said; 'that's one of our difficulties. Still, many will look after their homes and parents, and so forth, and I do like the real "home girl," don't you? But I am afraid we are wandering a little.'

"Yes, of course,' I said, 'we must look at the whole question.'

"She was looking rather surprised, but I did not want her to ask too many questions before I could find out just where we were about these 'girls.' 'You will want us to teach them all about their own health, and children, and then about their houses and servants, and how to look after their parents and make their homes clean and happy.'

"Really,' she interrupted me, 'we have very little time.'

"I'm so sorry,' said I, 'I'll go quicker; and their husbands—'

"Please,' said the lady, and I noticed she was getting quite pink, like the Professor, about girls, 'I must change the subject.'

"Oh, of course,' I cried. 'I know there won't always be the same things to teach. I know there is all about children's illnesses, and nursing them, and the treatment of delicate and defective children, and first aid. If they are to have servants, I will find out what servants do, and teach the girls to do it. I suppose you don't have the servants here to teach, do you?"

"I think, Miss Mars,' said the quite red head mistress, 'you have no conception of a modern curriculum—English, history, geography, mathematics.'

"But why do your girls do all these things? The Professor said they grew into women, and I know your women have children and husbands, though of course ours don't."

"Miss Mars!' said the lady, rising, quite purple, and looking so terrible. 'Miss Mars!'"

* * * * *

"Miss Marsden!"

I woke. It was Mrs. Clutton. Where was Miss Mars?

"I'm afraid you are too tired for a little bridge to-night?" she said gently. "Can you? But we won't bother you. I expect you are quite worn out with teaching."

H. W.

COMMITTEES ON SCIENCE AND MODERN LANGUAGES.

IN pursuance of the arrangements which the Government have made for reviewing the system of education as a whole, the Prime Minister, it is officially announced, has appointed two Committees to inquire into the position of science and modern languages respectively in the system of education in Great Britain.

Science.

The terms of reference of the Science Committee are as follows:—

To inquire into the position occupied by natural science in the educational system of Great Britain, especially in secondary schools and Universities, and to advise what measures are needed to promote its study, regard being had to the requirements of a liberal education, to the advancement of pure science, and to the interest of the trades, industries, and professions which particularly depend upon applied science.

The members are:—Sir J. J. Thomson, O.M. (Chairman), Cavendish Professor of Experimental Physics, Cambridge; the Right Hon. F. D. Acland, M.P., Secretary to the Board of Agriculture; Professor H. B. Baker, Professor of Chemistry, Imperial College of Science; Mr. Graham Balfour; Sir William Beardmore, chairman William Beardmore & Co.; Sir G. H. Cloughton, Chairman London and North-Western Railway; Mr. C. W. Crook; Miss E. R. Gwatkin, Head Mistress Queen Mary High School, Liverpool; Sir Henry Hibbert, M.P., late member of the Consultative Committee of the Board of Education; Mr. William Neagle; Mr. F. G. Ogilvie, director of the Science Museum, South Kensington; Dr. Michael Sadler, Chancellor of Leeds University; Prof. E. H. Starling, M.D., Jodrell Professor of Physiology, University College, London; Mr. W. W. Vaughan, Master of Wellington College; Secretary, Mr. F. B. Stead, H.M. Inspector of Schools.

Owing to unforeseen circumstances Lord Crewe finds that it will not be possible for him to act as Chairman of the Committee, as previously announced.

Modern Languages.

The terms of reference of the Modern Languages Committee are as follows:—

To inquire into the position occupied by the study of modern languages in the educational system of Great Britain, especially in secondary schools and Universities, and to advise what measures are required to promote their study, regard being had to the requirements of a liberal education, including an appreciation of the history, literature, and civilization of other countries, and to the interests of commerce and public service.

The members are: Mr. Stanley Leathes (Chairman), First Civil Service Commissioner; Mr. C. A. Montague Barlow, M.P.; Mr. E. Bullough; the Right Hon. Sir Maurice de Bunsen, late H.M. Ambassador in Vienna; Mr. A. C. Coffin, Director of Education at Bradford; Dr. H. A. L. Fisher, Vice-Chancellor of Sheffield University; Mr. H. C. Gooch, late Vice-Chairman L.C.C. Education Committee; Mr. J. W. Headlam, H.M. Staff Inspector of Secondary Schools; Mr. L. D. Holt; Dr. Walter Leaf, Homeric scholar and Deputy-Chairman of the London County and Westminster Bank; Dr. G. Macdonald, of the Scottish Education Department; Mr. A. Mansbridge, of the Workers' Educational Association; Mr. Nowell Smith, Head Master of Sherborne; Miss M. J. Tuke, Principal of Bedford College; Sir James Yoxall, M.P., General Secretary of the National Union of Teachers; Secretary, Mr. A. E. Twentyman.

In considering the provision of scholarships, bursaries, &c., the Committees are requested to take into account the Interim Report of the Consultative Committee of the Board of Education on this subject.

Communications intended for the Committees should be addressed to the Secretaries, Mr. Stead or Mr. Twentyman, as the case may be, at the Office of the Board of Education, Whitehall, London, S.W.

BLACKIE & SON'S NEW LIST

In these days of economy experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

ROMAN LIFE AND CUSTOMS.

A Latin Reader. By R. A. A. BERESFORD, M.A., Headmaster of Lydgate House School, Hunstanton; formerly scholar of Selwyn College, Cambridge, and E. C. SMITH, B.A., formerly scholar of Corpus Christi College, Oxford. With Vocabulary. Illustrated. 2s.
A simple account of some of the principal features of Roman life, mainly confined to the later days of the Republic.

SOME PARALLELS and DIFFERENCES IN GREEK and LATIN SYNTAX.

By REV. C. ANNACKER, S.J., B.A. 9d.
For candidates at Examinations such as the Certificate, Higher and Lower, Oxford Locals, London Matriculation, and the like.

ON THE WRITING OF ENGLISH.

By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School. 3s. 6d. net.

HOW WARS WERE WON.

A Short Study of Napoleon's Times. By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School. With many Maps and Diagrams, some in colour. 5s. net.

Professor Spenser Wilkinson in *The Oxford Magazine* says: "I found it delightful to read. It is clearly and simply written, it describes a number of the most interesting campaigns, and it gives a true account of the great principles of war. When anyone now asks me for a good introduction to the subject of war I tell him to read Mr. Townsend Warner's book."

THE MAIN STREAM OF EUROPEAN HISTORY.

By Rev. FREDERICK HARRISON, M.A., Senior History Master, Rutherford College, Newcastle-upon-Tyne. 1s. 6d.

EUROPE SINCE NAPOLEON. (1815-1910.)

By ELIZABETH LEVETT, Tutor in Modern History, St. Hilda's Hall, Oxford. With 10 Maps (2 in Colour). 3s. 6d.
"The author has done her work well. The essential points are never missed, and, however rapid the survey, the reader never loses the sense of continuous and closely related international narrative. . . . Miss Levett has an admirably clear and firm style, and her competency is manifest."—*Pall Mall Gazette*.

THE ENGLISH COUNTRY GENTLEMAN IN LITERATURE.

By G. N. POCOCK, M.A., Royal Naval College, Dartmouth. 1s.
A sketch of the character of the country gentleman as represented in English literature, beginning with Chaucer's *Franklyn* and tracing the development through the Stuart period and the eighteenth century, when the country gentleman figured so largely in the writings of essayists, novelists, and dramatists, down to the nineteenth century, and the writings of Dickens and George Eliot. The text takes the form of extracts from standard writers, with introduction and running commentary by the editor.

A JUNIOR CHEMISTRY.

By W. WILLINGS, B.Sc., Senior Science Master, Municipal Secondary School, Brighton. 2s. 6d.
A course dealing mainly with the experimental facts of Chemistry; it covers the syllabuses of the Oxford and Cambridge Junior Local Examinations, and a large number of questions set at these examinations will be found at the end of every chapter.

ELEMENTARY CHEMISTRY for RURAL SECONDARY SCHOOLS and AGRICULTURAL COLLEGES.

By ERNEST JONES, M.Sc., Science Master at the Aberystwyth County School, and J. JONES GRIFFITH, B.Sc., Lecturer in Agricultural Chemistry at the University College of Wales, Aberystwyth. 2s. 6d. net.
Choosing its examples from the farm, the garden, and the dairy, this book provides a sufficient knowledge of the principles of chemistry to enable students to proceed to an intelligent study of agricultural chemistry.

CARLYLE—THE HERO

AS PROPHET, MAN OF LETTERS, KING. From *Heroes and Hero Worship*. Cloth limp. 1s.

TILLAGE, TRADE, AND INVENTION. An Outline of Industrial History.

By GEORGE TOWNSEND WARNER, M.A. Crown 8vo, cloth. 2s.

LANDMARKS IN ENGLISH INDUSTRIAL HISTORY.

By G. TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge, Master of the Modern Side in Harrow School. 5s. net.

Just Published. Sequel to "*Le Livre Rouge*."

LE LIVRE BLEU.

A SECOND BOOK OF FRENCH IN COLOURED PICTURES.

By E. MAGEE, Edgbaston High School for Girls, Birmingham.

With Sixteen Full-page Coloured Pictures and many other Illustrations. Demy 8vo. 2s.

LE LIVRE ROUGE.

A First Book of French in Coloured Pictures. By E. MAGEE, Edgbaston High School for Girls, Birmingham. With many full-page Coloured Pictures and other Illustrations. Fcap. 4to, 1s. 6d.

LE TEXTE EXPLIQUE.

Recueil de morceaux choisis des auteurs français, arrangés en groupes selon le sujet traité, avec explications détaillées rédigées en français. Cours Moyen. Selected and edited by E. J. A. GROVES, B. ès L., L. ès L., Senior French Master, Bradford Grammar School. Cloth boards, 2s.

INTERMEDIATE FRENCH COURSE, PART I, SECTION II.

LOWER GRADE SYNTAX AND COMPOSITION.

By JAMES M. MOORE, M.A., and JOHN SLIGHT, M.A. Crown 8vo, cloth. Price 1s. net.

COURS DE FRANÇAIS, d'après les Textes.

By M. ANCEAU and E. MAGEE, Edgbaston High School for Girls, Birmingham. Cloth boards, 1s. 6d.

Introduces pupils of 12 to 14 years of age, who have had one year's teaching by the direct method, to a more systematic knowledge of the necessary grammar.

BLACKIE'S LONGER FRENCH TEXTS.

From Modern French Literature. Printed in large, clear type, with brief Notes, Exercises, Phrase-list, and Vocabulary. Fcap. 8vo, 3d. each.

BLACKIE'S LITTLE FRENCH CLASSICS

Representing all important French Authors from Montaigne to Bourget. Fcap. 8vo, 4d. each.

THE GROUNDWORK OF BRITISH HISTORY.

By GEORGE TOWNSEND WARNER, M.A., Sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c., and

C. H. K. MARTEN, M.A., Balliol College, Oxford; Assistant Master at Eton College.

With Maps, Time Charts, and Full Index. 764 pp., super-crown 8vo, 6s. Complete in One Volume.

In Two Parts, 3s. 6d. each. Part I, 55 B.C.-1603; Part II, 1603-1911.

For the convenience of those requiring the book for certain examinations it is also issued—

In Three Sections, 2s. 6d. each:—Section I, 55 B.C.-A.D. 1485; Section II, 1485-1714; Section III, 1714-1911.

Messrs. BLACKIE & SON will be pleased to send full Lists of Books suitable for Oxford and Cambridge Local Examinations 1917, post free on application.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON.
GLASGOW AND BOMBAY.

BOOKS OF THE MONTH.

Annals.

The Girls' School Year Book (Public Schools), 1916. *Year Book Press*, 5s. net.

MURBY'S LIST.

For upwards of 40 years Murby's name has been associated with a series of Sixpenny Scripture manuals, which have been revised from time to time and are still largely used. List of the twenty-two post free.

Recently Murby's have commenced two new series, particulars of which follow.

NEW SCRIPTURE MANUALS WITH TEXT.

By Rev. Dr. KNAPP, of Merton College, Oxford.

- St. LUKE** { Just issued. **A Smaller Manual** for Local Examinations. 1/6. **A Larger Manual** will be ready at end of the year.
- THE ACTS** { **A Larger Manual** for Upper Forms. 2/6 net. "May be confidently recommended to students."—*Times Educational Supplement*.
- THE ACTS** { **A Smaller Manual** for Local Examinations. Vol. I (Chapters I to XVI). 1/- "All-round excellence."—*School World*.
- THE ACTS** { Vol. II (Chapters XVII to XXVIII). 1/-, now ready.
- St. MARK** { **A Larger Manual** for Upper Forms. 1/6 net. "Most scholarly . . . nicest discrimination and judgment."—*The Journal of Education*.
- St. MARK** { **A Smaller Manual** for Local Examinations. 1/- "From every point of view excellent."—*Educational Times*.

By G. W. WADE, D.D., and J. H. WADE, M.A.

In preparation, **A Larger Manual** and **A Smaller Manual** on one of the Old Testament Books.

"There is no series of commentaries in existence better fitted to furnish the senior student of the Bible with the knowledge he needs than Murby's Larger Scripture Manuals; and there is no series better adapted to the mind of the junior pupil than the same publishers' Smaller Scripture Manuals."—*Expository Times*.

Professor CAMPAGNAC'S Pamphlets.

Practical Problems in Education. Parts I and II. 6d. each net.

GRAILY HEWITT'S Pamphlets on everyday Handwriting. Handwriting: **Everyman's Handicraft.** A Short Essay by GRAILY HEWITT. 1s. net.

History made Easy. Being an Epitome of English History, prepared on a new principle, intended more particularly for the Public Examinations. By JOHN GIBSON, M.A. New and Revised Edition. 1s. 6d. net.

SCIENCE.

The Arithmetic of Electrical Measurements, with numerous examples, fully worked, by W. R. P. HOBBS. Revised and edited, with six additional chapters, by A. RISDON PALMER, B.Sc., B.A., Lecturer in the Technical School, The Regent Street Polytechnic. 1/-

Magnetic Measurements, by A. RISDON PALMER, B.Sc., B.A., uniform with the above book, will be ready this Autumn.

Rutley's Mineralogy. New Edition. Revised by H. H. READ, A.R.C.S., B.Sc. With Introduction by G. T. HOLLOWAY. 3/6 net. *The Mining Magazine* says: "It is admirable in every way, and the greatness of Rutley is restored." *The Geological Magazine* says: "Reviser and publisher are alike to be congratulated on their success in building on the sound foundation of Rutley a most valuable and comprehensive work."

Minerals and the Microscope, an introduction to the Study of Petrology, by H. G. SMITH, A.R.C.S., B.Sc., F.G.S. 3/6 net. "The handiest and best illustrated introduction that we possess to an important aspect of rock minerals."—*Nature*.

Geological Excursions round London, by G. MACDONALD DAVIES, B.Sc., F.G.S. 3/6 net. "A book of this sort has long been wanted. It is altogether an excellent book, unlike any other."—*Schoolmaster*.

The Mind at Work, an elementary Handbook of Applied Psychology. Edited by GEOFFREY RHODES. 3/6 net. "The present compilation gives almost exactly what is wanted. The larger and more advanced textbooks give too much. . . . The contributors are masters who know what they are talking about and how to say it, and the whole is both medically and theologically orthodox."—*Church Times*.

Dr. Finny's First Aid. A Classified Series of First Aid notes and an interleaved note book for Ambulance Students, by W. E. ST. LAWRENCE FINNY, M.D. Third Edition. 6d. net.

SCIENTIFIC APPARATUS, &c.

MINERALS, &c., TO ILLUSTRATE RUTLEY'S "MINERALOGY."

100 minerals metalliferous, non-metalliferous, and Rock-forming, 23/- Other collections of minerals, 50, 100, and 200 at 11/6, 23/6, and 47/- respectively. Rock specimens—Collections of 50, 100—11/6 and 23/6. Mineral Crystals—25, 33/-; 50, 42 15s. Blowpipe apparatus, 30/-; 25 mineral fragments for experiment, 2/- Collections of Fossils also.

SECTIONS TO ILLUSTRATE SMITH'S MINERALS and the MICROSCOPE. For the Polarizing Microscope—13 mounted mineral specimens for use in ordinary light, and in parallel and convergent polarized light, 33/- Quartz Wedge, 15/-; Micaplate, 4/-

REPRESENTATIVE SECTIONS OF ROCKS.

IGNEOUS ROCKS: 12 Plutonic, 18/-; 7 Hypabyssal, 10/6; 10 Volcanic, 15/- **SEDIMENTARY ROCKS,** 10 for 15/- **METAMORPHIC ROCKS,** 9 for 12/6.

An Additional list of 24 for 30/-. Single Sections, 1/6.

A general list of 800 slides to select from.

THOMAS MURBY & CO., 6 Bouvarie Street, London, E.C.

G. BELL & SONS, LTD.

A Real Business Arithmetic.

COMMERCIAL ARITHMETIC AND ACCOUNTS.

By A. RISDON PALMER, B.A., B.Sc., Head of the Matriculation Department, The Polytechnic, Regent Street, London, and JAMES STEPHENSON, M.A., M.Com., B.Sc. (Econ.), Head of the Higher Commercial Department, The Polytechnic, London.

NOW READY.—Part I, 2s. net; with Answers, 2s. 6d. net. Part II, 2s. net; with Answers, 2s. 6d. net. Also Parts I and II in 1 vol., 3s. 6d. net; with Answers, 4s. net.

In preparation.—Part III, 2s. net. Also the complete book, 5s. net.

JOHN M. PROCTOR & CO.,
St. Anne's Institute, Island Street, Nottingham.

ROYAL NAVAL COLLEGE, OSBORNE.

For information relating to the entry of Cadets, Parents and Guardians should write for "How to become a Naval Officer" (with an Introduction by Admiral the Hon. Sir E. R. FREMANTLE, G.C.B., C.M.G.), containing an illustrated description of life at the Royal Naval Colleges, at Osborne and Dartmouth, post free on application to GIEVE'S, Limited, 65, South Molton Street, London, W.

Special Entry of Naval Cadets.

The Secretary of the Admiralty announces that the scheme of Special Entry to Naval Cadetships, which was instituted in 1913, for a period of four years, will be continued beyond the year 1916 until further notice. The examinations are held annually in June, and candidates are required to be not more than 18½, nor less than 17½, years of age on June 1st.

Regulations can be obtained on application to

**GIEVE'S, Limited, 65, South Molton Street,
London, W.**

DUSTLESS and HYGIENIC SCHOOLS

On all School, Laboratory, Library, &c., Floors and Linoleums of every description

USE FLORIGENE (Regd.)

DURING the SUMMER VACATION for Best Results.

It is **IMPORTANT** to **NOTE** that **ONE APPLICATION** of "Florigene" **ALLAYS** the **DUST** and **DIRT** for **2 TO 12 MONTHS**, according to traffic, not only during each Sweeping (without sprinkling of any kind) but also throughout all the intervening periods—which is of greater hygienic importance. "Florigene" also saves time and labour, and is easily applied.

These sanitary, labour-saving, and economic advantages are **NOT** attained by sweeping-powders or any mechanical or other method.

THE PUBLIC SCHOOL SPELLING CARD.

Sixtieth Thousand. Price 6d. (3d. net to purchasers of 100 Cards).

Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than twenty years), with Rules.

Also, in Book Form,

HOW TO SPELL AND SPEAK ENGLISH.

Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

By **H. R. LADELL, M.A.**

(late Head Master of the London International College, Isleworth).

FRENCH ESSENTIALS AND FRENCH CONVERSATION SENTENCES.

Fourth Edition. Price 2s., cloth. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*The Journal of Education*.

"The colloquial sentences at the end are a useful addition."—*The Bookman*.
"As a teacher of long experience the author has been able to give special attention to those points at which he finds pupils are most apt to blunder. This is essentially a school book. It should save the class-teacher a vast amount of tedious labour by putting him, as it does, in possession of the essence of the author's many years' experience in class teaching."—*The School Board Chronicle*.

SHORT FRENCH EXAMINATION PAPERS (110).

Each containing Six Idiomatic Sentences to render into French. Very Useful for Oral Work. Second Edition. Price 2s. 6d. cloth.

By the same Author.

"A very useful set of questions."—*Modern Language Quarterly*.
"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints and one or two slips that we have noticed."—*The Journal of Education*.

A KEY (with a list of errata), issued to Teachers and Private Students only, can be obtained from the Publishers, 6s. net. (Half-price to purchasers of a dozen copies of the Examination Papers.)

The War.

The Great World War: A History. Part XII. Edited by Frank A. Mumby. *Gresham*.

THOUGHTS ON A PAGE OF *THE TIMES*.

HEED the words of a veteran sage:
Why do the heathen so furiously rage?
Whigs and Tories, alike purblind,
One of the crew they fain would find,
To train to wisdom the nascent mind.
Yet there's a dominie I can show,
A layman, master of those that know;
No time-server he, though born to rule,
Content to keep in the suburbs a school.
He is the man to make a Peer,
Through mines and submarines he will steer
The vessel of State, and if he hold sway,
Jews and dissenters will all obey.
I, the Sage, am his guarantee,
And the *Times* will say ditto to T. E. P.

MODERN FOREIGN LANGUAGES.—The Commercial Education Committee of the London Chamber of Commerce have received the following communication:—"Having knowledge of the excellent results of the examinations in French shorthand organized by your honourable association, the Administrative Council of the Association Sténographique Unitaire, Paris, has decided to offer to the London Chamber of Commerce a medal in silver, to be awarded to one of the candidates in the name of the Association Sténographique Unitaire." The London Chamber of Commerce, it passes without saying, welcome this appreciative recognition of the persistent endeavour to place the acquisition of foreign languages in the forefront of commercial education. It helps to swell the encouragement given by the French, Spanish, Portuguese, Italian, Norwegian, and other Governments which have furnished special awards for that purpose. Home support, too, has not been lacking. In addition to the Chamber's own prizes, the Worshipful Company of Salters have, since the commencement of the scheme, presented annually two scholarships, each of £25, to successful candidates in the Senior and Junior Examinations in Modern Foreign Languages. Foreign languages for the British commercial representative are indispensable, Spanish and Portuguese being of paramount importance. Our enemy boasts that South American trade will be almost exclusively in his hands. That boast must be discredited.

CAMBRIDGE LOCAL EXAMINATIONS.—The class lists of the Cambridge Local Examinations held in July have been published, showing that the total number of candidates entered was 8,778, exclusive of 729 who were examined at Colonial Centres. In the Senior Examination 1,333 boys and 2,062 girls passed, First Class Honours being gained by 98 boys and 25 girls. The standard of merit necessary for exemption from one or both parts of the Previous Examination was reached by 697 boys and 492 girls. Of the junior candidates 1,567 boys and 1,086 girls satisfied the examiners, 147 boys and 12 girls being placed in the First Class. In the Preliminary Examination 262 boys and 222 girls passed. It is hoped that the class lists for the Colonial Centres will be issued in September.

The Associated Board holds Examinations throughout the United Kingdom, and in the Colonies, in both Theoretical and Practical Music.

The Examinations are as follows:—

- (1) **Local Centre Examinations**, including Intermediate and Advanced Grades, conducted by two Examiners. Theory Examinations are held in March and November at all Centres in Great Britain and Ireland. In Practical Subjects they are held in March-April at all Centres, and in the London district and certain Provincial Centres in November-December as well as in March-April.
 Entries for the November-December Examinations close Wednesday, October 18th, 1916.
 Full particulars will be found in Syllabus A, which will be sent on application to the Secretary.
- (2) **School Examinations**, including Higher, Lower, Elementary, and Primary Divisions. Candidates for these Examinations may be entered either by Heads of Schools or by individual Teachers. In the latter case, neither the Teacher nor the Candidate need necessarily be connected with a School.
 The School Examinations are held throughout the British Isles at three periods, viz., October-November, March-April, and June-July. They are conducted by one Examiner.
 Entries for the October-November Examinations close Wednesday, October 11th, 1916.
 Full particulars of the School Examinations, including the **General School Examination** and the **Class-Singing Examination**, will be found in Syllabus B, which will be sent on application to the Secretary.

These Examinations are of graduated difficulty, so as to provide a complete series of tests from the Primary Division School to the Advanced Grade Local Centre Examination, suited to Candidates of all degrees of proficiency. The subjects for Examination are as follows:—

GRAMMAR OF MUSIC.
RUDIMENTS OF MUSIC.
HARMONY.
COUNTERPOINT.
PIANOFORTE.
ORGAN.
VIOLIN.

VIOLA.
VOLONCELLO.
DOUBLE BASS.
HARP.
WIND INSTRUMENTS.
SINGING.
EAR TRAINING AND SIGHT SINGING.

The Board offers annually **Six Exhibitions**, tenable for two or three years at the R.A.M. or R.C.M. These Exhibitions are limited to Candidates in the Local Centre Examinations who are under twenty years of age, and who fulfil certain conditions set forth in each Syllabus.

Forms of Entry, Theory Papers set in previous years, and all information can be obtained from the Central Office, 15 Bedford Square, London, W.C.

Syllabuses A and B for 1916 or for 1917, the Syllabus in Ear Training and Sight Singing, Entry Forms and any further information can be obtained on application to the Secretary, 15 Bedford Square, London, W.C.

A SELECTION FROM METHUEN'S LIST

DIVINITY.

- Old Testament History for Use in Schools.** By the Rev. W. F. BURNSIDE, M.A. Seventh Edition. Crown 8vo. 3s. 6d.
Stories from the Old Testament. By E. M. WILMOT-BUXTON, F.R.Hist.S. Third Edition. Crown 8vo. 1s. 6d. [Beginner's Books.]
Stories from the New Testament. By E. M. WILMOT-BUXTON, F.R.Hist.S. Crown 8vo. 1s. 6d. [Beginner's Books.]

ENGLISH.

- A Junior English Grammar.** By Canon W. WILLIAMSON, B.A. With numerous passages for Parsing and Analysis, and a chapter on Essay Writing. Fifth Edition. Crown 8vo. 2s. [Junior School Books.]
Junior English. By F. J. RAHTZ, M.A., B.Sc. Twelfth Edition. Crown 8vo. 1s. 6d.
Higher English. By F. J. RAHTZ, M.A., B.Sc. Tenth Edition. Crown 8vo. 3s. 6d.
A Classbook of Easy Dictation and Spelling. Selected by Canon W. WILLIAMSON, B.A. Eleventh Edition. Fcap. 8vo. 1s. [Beginner's Books.]
A Classbook of Dictation Passages. Selected by Canon W. WILLIAMSON, B.A. Eighteenth Edition. Crown 8vo. 1s. 6d. [Junior School Books.]
English Literature. By F. J. RAHTZ, M.A., B.Sc. Crown 8vo. 2s. 6d.
Selections from English Literature. Vol. I (1350-1700). By F. J. RAHTZ, M.A., B.Sc. Crown 8vo. 2s.
Selections from English Literature. Vol. II (1700-1900). By H. N. ASMAN, M.A., B.D. Crown 8vo. 2s.
Tommy Smith's Animals. By EDMUND SELOUS. With 8 Illustrations by G. W. ORD. Fourteenth Edition. Fcap. 8vo. 1s. 6d.
Tommy Smith's Other Animals. By EDMUND SELOUS. With 12 Illustrations by AUGUSTA GUEST. Seventh Edition. Fcap. 8vo. 1s. 6d.

FRENCH.

- A Junior French Grammar.** By L. A. SORNET and M. J. ACATOS. Fourth Edition. Crown 8vo. 2s. [Junior School Books.]
Nouvelle Grammaire Française, à l'usage des écoles Anglaises. By J. G. ANDERSON, B.A., Examiner to London University. Crown 8vo. 2s.
Exercices de Grammaire Française. By J. G. ANDERSON, B.A. Crown 8vo. 1s. 6d.
A Junior French Prose. By R. R. N. BARON, M.A. Seventh Edition. Crown 8vo. 2s. [Junior School Books.]
French Prose Composition. By R. R. N. BARON, M.A. Sixth Edition. Crown 8vo. 2s. 6d. Key (Second Edition). 3s. net.

By A. M. M. STEDMAN, M.A.

- Steps to French.** Twelfth Edition. 18mo. 8d.
First French Lessons. Twelfth Edition. Crown 8vo. 1s.
Easy French Passages for Unseen Translation. Seventh Edition. Fcap. 8vo. 1s. 6d.
Easy French Exercises on Elementary Syntax. With Vocabulary. Fourth Edition, Revised. Crown 8vo. 2s. 6d. Key. 3s. net.
French Vocabulary for Repetition: Arranged according to Subjects. Sixteenth Edition. Fcap. 8vo. 1s.
French Examination Papers in Miscellaneous Grammar and Idioms. Sixteenth Edition. Crown 8vo. 2s. 6d. Key (Sixth Edition), issued to Tutors and Private Students only. 6s. net.

GREEK.

- Passages for Unseen Translation.** By A. M. COOK, M.A., and E. C. MARCHANT, M.A. Selected from Latin and Greek Literature. Sixth Edition. Crown 8vo. 3s. 6d.

By A. M. M. STEDMAN, M.A.

- Steps to Greek.** Fifth Edition. 18mo. 1s.
A Shorter Greek Primer. Revised by C. G. BOTTING, M.A., Sixth Edition. Crown 8vo. 1s. 6d.
Easy Greek Passages for Unseen Translation. Revised by C. G. BOTTING, M.A. Fifth Edition. Fcap. 8vo. 1s. 6d.
Greek Vocabulary for Repetition. Revised by C. G. BOTTING, M.A. Fifth Edition. Fcap. 8vo. 1s. 6d.
Greek Examination Papers in Miscellaneous Grammar and Idioms. Eleventh Edition. Crown 8vo. 2s. 6d. Key (Fourth Edition), issued to Tutors and Private Students only. 6s. net. [School Examination Series.]

HISTORY.

- Stories from Roman History.** By E. M. WILMOT-BUXTON, F.R.Hist.S. Fourth Edition. Crown 8vo. 1s. 6d. [Beginner's Books.]
A Short History of Rome to the Death of Augustus. By J. WELLS, M.A. With 3 Maps and 4 Plates. Fourteenth Edition. Crown 8vo. 3s. 6d.
Easy Stories from English History. By E. M. WILMOT-BUXTON, F.R.Hist.S. Eighth Edition. Crown 8vo. 1s. [Beginner's Books.]
A Junior History of Great Britain. By E. M. WILMOT-BUXTON, F.R.Hist.S. Third Edition. Crown 8vo. 2s.

HISTORY (continued).

- A History of Great Britain.** From the Coming of the Angles to the Year 1870. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 20 Maps. Fifth Edition. Crown 8vo. 3s. 6d.
SIX AGES OF EUROPEAN HISTORY. From A.D. 476 to 1878. Edited by A. H. JOHNSON, M.A., Fellow of All Soul's College, Oxford. With Maps. Crown 8vo. 2s. 6d. each.
The Dawn of Mediaeval Europe, 476-918. By J. H. B. MASTERMAN, M.A. Third Edition.
The Central Period of the Middle Age, 918-1273. By B. A. LEES. Third Edition.
The End of the Middle Age, 1273-1453. By E. C. LODGE. Third Edition.
Europe in Renaissance and Reformation, 1453-1600. By M. A. HOLLINGS, M.A. Fourth Edition.
The Age of the Enlightened Despot, 1600-1789. By A. H. JOHNSON, M.A. Fifth Edition.
The Remaking of Modern Europe: From the Outbreak of the French Revolution to the Treaty of Berlin, 1789-1878. By J. A. R. MARRIOTT, M.A. Ninth Edition.

LATIN.

By A. M. M. STEDMAN, M.A.

- Initia Latina.** Easy Lessons on Elementary Accidence. Revised by C. G. BOTTING, M.A. Fifteenth Edition. Fcap. 8vo. 1s.
First Latin Lessons. Revised by C. G. BOTTING, M.A. Fourteenth Edition. Crown 8vo. 2s.
A First Latin Reader. With Notes adapted to the Shorter Latin Primer and Vocabulary. Revised by C. G. BOTTING, M.A. Seventh Edition. 18mo. 1s. 6d.
Easy Latin Passages for Unseen Translation. Fifteenth Edition. Fcap. 8vo. 1s. 6d.
Easy Latin Exercises on the Syntax of the Shorter and Revised Latin Primers. Revised by C. G. BOTTING, M.A. With Vocabulary. Fifteenth Edition. Crown 8vo. 1s. 6d. Key. 3s. net.
Latin Vocabulary for Repetition. Arranged according to subjects. Revised by C. G. BOTTING, M.A. Eighteenth Edition. Fcap. 8vo. 1s. 6d.
Latin Examination Papers in Miscellaneous Grammar and Idioms. Sixteenth Edition. Crown 8vo. 2s. 6d. Key (Seventh Edition), issued to Tutors and Private Students only. 6s. net.
Junior Latin Examination Papers. By C. G. BOTTING, M.A., Assistant Master at St. Paul's School. Tenth Edition. Fcap. 8vo. 1s. Key. 3s. 6d. net. [Junior Examination Series.]

ARITHMETIC.

- Easy Exercises in Arithmetic.** Containing 5,000 Examples. By W. S. BEARD. Eighth Edition. Fcap. 8vo. With Answers. 1s. 3d. Without Answers. 1s. [Beginner's Books.]
A New Junior Arithmetic. By H. BOMPAS SMITH, M.A. Third Edition. Crown 8vo. With Answers. 2s. 6d. Without Answers. 2s.
The present edition contains additional examples on the lines of the questions set at the Oxford and Cambridge Junior Local Examinations, by W. S. Beard.

SCIENCE.

- Preparations and Exercises in Inorganic Chemistry.** By W. LOWSON, B.Sc., F.I.C. With many Diagrams. Crown 8vo. 2s. 6d.
Elementary Experimental Chemistry. By A. E. DUNSTAN, D.Sc. Lond. With 109 Diagrams. Fifth Edition, Revised. Crown 8vo. 2s. [Junior School Books.]
A Junior Chemistry. By E. A. TYLER, M.A., F.C.S. With 78 Illustrations. Eighth Edition. Crown 8vo. 2s. 6d. [Junior School Books.]
A Textbook of Inorganic Chemistry. By G. SENTER, D.Sc., Ph.D., Author of "Outlines of Physical Chemistry." With many Diagrams. Second Edition, Revised. Crown 8vo. 6s. 6d. [Textbooks of Science.]
The Complete School Chemistry. By F. M. OLDHAM, M.A. With 123 Illustrations. Ninth Edition. Crown 8vo. 4s. 6d. [Textbooks of Science.]
A Senior Experimental Chemistry. By A. E. DUNSTAN, D.Sc. Lond., and F. B. THOLE, D.Sc. With Diagrams and Illustrations. Crown 8vo. 5s. [Textbooks of Science.]
Practical Physical Chemistry. By J. B. FIRTH, M.Sc. Crown 8vo. 2s. 6d.
Outlines of Physical Chemistry. By GEORGE SENTER, D.Sc., Ph.D. With many Diagrams. Fifth Edition, Revised. 3s. [Textbooks of Science.]
Elementary Experimental Science. Physics. by W. T. CLOUGH, A.R.C.S. Chemistry, by A. E. DUNSTAN, D.Sc. With 2 Plates and 145 Diagrams. Fifteenth Edition. Crown 8vo. 2s. 6d. [Junior School Books.]

Class = Books

FOR THE

PRELIMINARY EXAMINATIONS.

"Excellent textbooks for the use of junior forms. The language is simple, the examples are judicious, and everything possible is done to make the subject bright and interesting to the pupils."—*The Literary World*.

Arithmetic, Preliminary. By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 1s. 6d. With Answers, 1s. 9d.

This book provides a course of Arithmetic suitable for pupils of ten to fourteen years of age.

The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian*.

Chemistry, Preliminary. By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 1s. 6d.

A course for beginners dealing with the leading principles of chemical theory.

It is an excellent little book, and will make a clear understandable foundation for a systematic treatment of Chemistry in the higher forms."—*Educational News*.

English Course, Preliminary. By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough Boys' High School. 1s. 6d.

A beginner's course in Grammar and Composition based mainly on inductive methods.

An English Grammar embodying in general recommendations of the Joint Committee on Grammatical Terminology. The author has kept in view the real aim of grammar, namely, the production of good English."—*Athenaeum*.

French Course, Preliminary. By H. J. CHAYTOR, M.A., Head Master of Plymouth College, and H. E. TRUELOVE, B.A., Modern Language Master at Plymouth College. 1s. 6d.

A beginner's course, containing Grammar and Translation from and into French.

An excellent first year's work, well arranged, with due regard to the advantages of the Direct Method."—*Athenaeum*.

Geography, Preliminary. By E. G. HODGKISON, B.A., Assistant Master, County Secondary School, Crewe. 1s. 6d.

A book for beginners, containing Elementary Physical Geography, an outline of the Geography of the World, and the Geography of the British Isles in detail.

Bears the stamp throughout of the skillful practical teacher who combines a sound knowledge of his subject with an equally sound knowledge of the needs and capacities of the pupils."—*Teachers' Times*.

Geometry, Preliminary. By FABIAN ROSENBERG, M.A., B.Sc. With or without Answers. 2s.

A book for beginners containing a judicious blending of practical and theoretical work. Insists throughout on reasoning from first principles. Covers Sections A. i and ii and B. i and ii of the Oxford and Cambridge Syllabus.

History of England, Preliminary. By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, B.A. With numerous Illustrations. 2s.

This book is intended for the use of learners of the ages of ten to thirteen, and will in addition to political history deal fully, though in an elementary way, with those social and economic questions to which modern history teaching now rightly attaches such importance.

Cause and effect, a due sense of proportion, and the general sequence of historical facts, have all their parts assigned to them, whilst the correlation of history and geography is not forgotten."—*Schoolmaster*.

Spelling and Punctuation (with Pieces for Dictation).

By HARRY SHOOSMITH, M.A., Modern Language Master, Wandsworth Technical Institute Secondary School. 8d.

A classbook containing rules for spelling, classified list of words commonly mis-spelt and words generally recognized as difficult, rules for punctuation and passages for dictation.

A useful little book for schools. It is very complete, and seems to deal with every difficulty which the pupil is likely to meet."—*Oxford Magazine*.

St. Luke, Gospel of (Preliminary Edition). By Rev. J. F. RICHARDS, M.A., and Rev. THOMAS WALKER, M.A. *1s.

The introduction contains full but strictly condensed notes on the text, date, purpose, and characteristics of the Gospel, as well as a careful analysis—altogether a very complete and workmanlike edition."—*Secondary School Journal*.

St. Mark, Gospel of (Preliminary Edition). By Rev. J. F. RICHARDS, M.A., and Rev. THOMAS WALKER, M.A. *1s.

Teachers, especially in junior forms, will find this a useful book."—*Preparatory Schools Review*.

St. Matthew, Gospel of (Preliminary Edition). By Rev. THOMAS WALKER, M.A. *1s.

"We welcome this further volume in a useful series."—*School World*.

* With Introduction, Notes, and Maps.

Complete Catalogue of Textbooks for Secondary Schools, post free, on application.

A MONTHLY RECORD AND REVIEW.

SCALE OF CHARGES FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page	... £5 10 0	One Column [$\frac{1}{2}$ page]	£3 0 0
Half Column [$\frac{1}{2}$ page]	1 15 0	One-Eighth Page	... 0 17 6
Per Inch in Column, 8/-.			

SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—6d. per line: minimum charge, 5s.

Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d.; prepaid rate.

Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s.; each 8 words after, 6d.; prepaid rate.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE, JUNIOR; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON :

WILLIAM RICE, JUNIOR, 3 BROADWAY, LUDGATE HILL, E.C.

THE NEW COMMITTEES.

LAST week the Government announced, through the medium of the Press Bureau, the appointment of Committees to inquire into the position of science and modern languages respectively in our system of education. We give the constitution of these important bodies on another page. Their duties are clearly of the most momentous character, for they involve the sedulous preservation of the interests of sound education in the face of probable demands for trade science and commercial language. Such demands are inevitable after the lessons of the War, and we recognize that far more must be done in the future than has been done hitherto in the direction of applying science to the purposes of manufacture and of providing linguistic ability to facilitate international trade. We do not admit, however, that in satisfying these specific demands we are providing a complete fabric of real and necessary education. The attempt to satisfy them will end in failure unless it is remembered that such specialized and applied studies can have no proper and lasting foundation other than a training which is in the broadest sense humane. It would be well if each committee were to place in a conspicuous position over the Chairman's desk a paraphrase of a well-known passage, which for this purpose might read: "When I have done with him he shall not be a 'foreign correspondent' or a 'scientific adviser.' He shall be first and foremost a man." The real trouble is that the country may be persuaded to pay for scientific experts and foreign correspondents more easily than for men. The immediate profit is perceived, the distant and greater good obscured. Hence there will be the temptation to justify the inevitable expenditure of public money by seeking to offer a speedy return in kind.

It is for the committees to resist this temptation and to keep steadily in view the true aims of a national system of education. We are not wholly satisfied that they are con-

stituted to that end. On the Science Committee we look in vain for any considerable number of teachers, and especially of those who have actual experience of teaching science in schools. The Committee on Modern Languages includes a former lecturer on Greek and Ancient History, an examiner in Law, an Ambassador, an editor of the "Cambridge Modern History," and a former secretary to the Workers' Educational Association. The varied attainments and eminence of those members command our unstinted respect, but we had hoped that the experience and knowledge of the men and women who are engaged in teaching modern languages in our schools would have been more fully recognized. The committees are more satisfactory than a Royal Commission, but they are not as strong as we could have wished. We hope that they will make every effort to learn the views of practical teachers and will give full consideration to them before issuing the reports which we shall await with much interest.

THE TEACHING OF EVERYDAY SCIENCE

By E. C. ABBOTT, M.A.

THE subject of science teaching in schools is now receiving considerable attention, and the present system seems to need some modification. Science is already taught in most secondary schools, and time and money are freely spent on it, but it is not sufficiently applied to the needs of everyday life, and very little useful knowledge is obtained. The principle of the present method of teaching science is that the pupil is not to be told anything, but to be led by a series of experiments to find out for himself. The purpose is to encourage the spirit of scientific inquiry and investigation, and the educative value is supposed to be of more importance than the facts gained. This may be the best training for a pupil who means to take up a scientific career, but does not go far enough for those who learn it only for two or three years. Science is so intimately connected with our everyday life that we want all the knowledge we can get in order to apply it.

There seem to be many objections to the present method.

- (1) It is necessarily so slow that the pupils have found out very little in the few years of their school life, and the most useful everyday science is never reached.
- (2) The spirit of inquiry shows itself later, when the pupils have enough knowledge for interest to be aroused. The subject generally begins with a long course of weighing and measuring, finding of density and specific gravity, which cannot interest any child.
- (3) The purpose of the experiment is often lost sight of in details of manipulation and apparatus.
- (4) Numerous experiments are performed and written out, but the great principles of the subject are not made conspicuous, and are obscured by details.
- (5) A great deal of valuable information might be given in the time taken in doing one experiment, and much time is necessarily lost in waiting for things to boil or to cool in the experiments themselves.
- (6) The apparatus and equipment are so costly that some schools cannot teach science at all and, where taught, the results are often out of proportion to the expense.

I find that pupils understand and remember experiments which have been clearly described or demonstrated to them, better than those they have performed themselves. In the former case the result is clear, and the attention of the pupils is directed to the essential parts of the experiment. In the latter the result is often obscure on account of want of skill or neglect of necessary precautions, and the point of the experiment is often confused with details of manipulation and apparatus. Also I find that pupils are more interested in trying to find out things for themselves when they already have some facts and principles on which to work.

In teaching science I have always tried to draw attention to the great principles of the subject, and have illustrated them by facts from everyday life. I found that my pupils

readily grasped these principles, and were then interested in working experiments to illustrate them, or to show how they might be altered or adapted to suit other conditions. They did fewer experiments than those taught under the present system and spent less time, but they understood more science, and they were able to apply and make use of all they knew.

I should like to suggest a two years' course in general everyday science, which should be illustrated largely by familiar examples from ordinary life, with a few simple experiments. It might include simple lessons on air, water, combustion, heat, pressure, forces of Nature, multiplication of power, laws of health, food of plants, and the cultivation and reproduction of flowers, fruit, and vegetables. This could be done in about three hours a week for two years with children of about eleven to fourteen, in the last two years of an elementary school, or the first two of a secondary or high school. It would show that science really is a study of Nature, and is not limited to the bottles and apparatus of a laboratory. Nature study has been taught as a living subject leading to botany and zoology. Why should not a more natural preliminary course be made for chemistry and physics? This would serve as a useful help and interest in life to those who were unable to go further, and would also be a good foundation for the regular experimental study of chemistry, physics, biology, and geography in the secondary schools.

It is suggested that this should be taught in an easy descriptive or narrative form, to provide a good basis of useful knowledge. The pupils, in place of describing their own experiments, would supply a number of illustrations from their own observation and experience. The pressure of water could be illustrated by fountains, water supply, hydraulics, springs, and submarines. The actions of swimming and floating, paddle-wheels and oars, Zeppelins and aeroplanes could be compared. Children are always interested in watching a workman doing repairs, and are curious to know what makes a train go, and why the wheels of a clock go round. They want to know how motors and bicycles move, and how telegraphs, telephones, gramophones, and living pictures work. Very few will reach this stage by their own experiments in an ordinary school course, and long before this the interest in them will have ceased.

It seems to me that the spirit of scientific inquiry would be all the more keenly aroused by having these wonderful things explained, and the pupils would be the more eager to find out for themselves, and to think out experiments by which they could do so. After having studied the forces of nature by wind mills, water mills, steam, and electricity, they would try to think out other likely forces. If waterfalls can be used to turn wheels or supply electricity, why not tides, currents, or waves? The study of multiplication of power shown by pulleys, levers, &c., would suggest similar cases. Such lessons would exercise the imagination, as new wonders were revealed, and would be most inspiring. The world is full of wonders unnoticed by most people, because not understood, and yet a knowledge of them would be most useful, and would add greatly to the interest of life. A knowledge of the science underlying ordinary life, as the laws of health, the care of children, cookery, and other household matters, gas and water supply, lighting, heating, and drainage, is needed every day, and much of the trouble of domestic life is due to ignorance of it.

Why should this knowledge of the useful and the wonderful be withheld from people until they are in a position to find them out for themselves by a series of long, slow, and uninteresting experiments, which probably take away all desire to know? Surely, though taught as facts, this knowledge is a most valuable and desirable possession, and would be an inspiration to scientific inquiry and effort. It would exercise the imagination, brighten the intellect, and fill the mind with beautiful, useful, and elevating thoughts. I hope very much that some arrangement may be made by which the facts and principles of science may be more generally taught, and brought to bear on everyday life and work.

EXAMINATIONS IN SECONDARY SCHOOLS.

A NEW CIRCULAR FROM THE BOARD OF EDUCATION.

THE Board of Education have issued the following Circular, dated July 20, 1916:—

CIRCULAR 956.

1. As a result of suggestions for the improvement of the examinations of secondary schools which were made by the Board of Education in their Circulars 849 and 933, revised Regulations to come into effect in 1917 have been issued by several of the University Examining Bodies, whose examinations are at present commonly taken by pupils in secondary schools. The Board have been in consultation with these Examining Bodies as to the conditions under which the revised examinations can be accepted as qualifying for admission to a training college and for the status of uncertificated teacher. They have decided to accept for either of these purposes a Pass in any one of the three examinations named below under the conditions stated in each case.

2. The Senior Local Examination of the University of Oxford will be accepted, provided that:—A. The candidate has qualified for a Senior Local Certificate and has reached a sufficient standard (whether at one or more examinations) in the following: Section I (English), Section II (b) (English History), Section III (Geography), Section XIII (a) (Arithmetic); or B. The candidate, if he has not qualified for a Certificate, has at one and the same examination reached a sufficient standard in the following:—(a) Division I [including Section I (English), Section II (b) (English History), Section III (Geography)]; (b) Section XIII (a) (Arithmetic); (c) either a Section in Division III, or Section XX (Music), or Section XXIII (Needlework), or Section XXIV (Drawing). (Note.—By "sufficient standard" in a section or subject is meant a standard equivalent to the standard at present required by the examining body for a Pass in the section or subject. Compensation will, however, be allowed between the sections of Division I.)

3. The Senior Local Examination of the University of Cambridge will be accepted, provided that:—A. The candidate has qualified for a Senior Certificate and has reached a sufficient standard (whether at one or more examinations) in English Composition, English Literature, English History, Geography, and Arithmetic; or B. The candidate, if he has not qualified for a Senior Certificate, has at one and the same examination reached a sufficient standard in:—(a) Group I (including English Composition, English Literature, English History and Geography); (b) Arithmetic; (c) either a subject of Group III, or Drawing, or Music, or Needlework. (Note.—By "sufficient standard" in a subject is meant a standard equivalent to the standard at present required by the examining body for a Pass in the subject. Compensation will, however, be allowed between the subjects of Group I.)

4. The School Certificate Examination of the Joint Matriculation Board for the Universities of Manchester, Liverpool, Leeds, and Sheffield will be accepted, provided that:—A. The candidate has qualified for a School Certificate and has reached a sufficient standard (whether at one or more examinations) in the following—English Composition and Literature, English History, Geography, and Arithmetic; or B. The candidate, if he has not qualified for a School Certificate, has at one and the same examination (1) reached a sufficient standard in English Composition and Literature, English History, Geography, Arithmetic, and either a subject from Group III (other than Geography) or a subject from Group IV (other than Shorthand or Book-keeping); and (2) reached a satisfactory standard in Group I and in the examination as a whole. (Note.—The terms "sufficient standard" and "satisfactory standard" have the same meaning as they bear in the new Regulations of the Examining Body.)

5. It should be noted that the conditions for recognition as an uncertificated teacher will in future be the same as the conditions for admission to a training college.

6. A candidate who passes in any of the examinations named above under the conditions set out under Head A, will be regarded by the Board as qualified for admission to a Degree course in a training college provided that he has also satisfied any further conditions which may be required by the authorities of the University for whose degree he is to be prepared as enabling them to accept the examination in place of their Matriculation Examination.

7. The Board are prepared to consider on their merits cases of

pupils in secondary schools who enter for the examination for the Certificate of any of the Examining Bodies named above, and who reach a sufficient standard in English, History, Geography, Arithmetic, and a Foreign Language, but fail to reach a sufficient standard in a subject from Group III or Group IV.

8. Any person who has obtained a Certificate from any of the Examining Bodies named at an examination held before January 1, 1917, and who may not be completely qualified either for recognition as an uncertificated teacher or for admission to a training college, will be allowed to complete his qualification in accordance with the Regulations of the Board which are at present in force, provided that he reaches a sufficient standard in those of the required subjects in which he has not already satisfied the Examiners.

9. A candidate who has obtained a Certificate from any of the three Examining Bodies named at an examination held before January 1, 1917, will be regarded as qualified by examination for admission to a training college if he satisfies the Examiners in either Drawing, or Music, or Needlework, as an alternative to passing in Mathematics, or a Science Subject, or a Foreign Language.

L. A. SELBY-BIGGE.

JOTTINGS.

CRUMBS from an examiner's table (Northern Universities Matriculation): (1) The private life of Horatio Nelson was most regrettable, but then this is the case with all really great men. (2) Nelson remained of short stature till the day of his death. He had many brothers and sisters; also many uncles and aunts. (3) Swift was a great man at damning people; so was Addison, but in a milder form. (4) Burns's poems are difficult for us to understand, for he writes about things that specially interest the Scotch, such as drink.

In the *Parents' Review* there is a touching appeal for the Polish refugees in Russia, some twelve millions of all nationalities, the victims of the German invasion of 1914. The material damage in the occupied districts is reckoned at £500,000,000. In providing food and shelter, the Red Cross and local associations from the first worked energetically, and in the first three months of the War the Tatiana Committee expended some million and a half roubles, and the Government, though late in entering the field, were not less energetic in providing hospitals, more permanent refuges, and work. The appeal comes from Mme Herzenstein, of Petrograd, and is published without any editorial corrections or comments.

THE *Bookseller* records the death of Mr. John Walker, founder and head of the well known wholesale stationers. From March 1880 to December 1883 Messrs. John Walker & Co. were publishers of *The Journal*.

BRITISH PRISONERS OF WAR.—The recent revelations respecting the conditions and needs—physical and mental—of some of the British prisoners of War interned abroad, coupled with the recently imposed restrictions on the transmission, by private individuals, of any printed matter to enemy or neutral countries, makes it more important than ever that friends and correspondents of our interned men, when writing to them, should acquaint them with the existence of an educational book scheme, under which they can get their wants supplied. Under this scheme any such prisoner can obtain, free of charge and carriage paid, good books of an educational character (not fiction or light literature) on almost any subject for reading or private study during his internment by communicating (either directly or through a correspondent) with Mr. A. T. Davies, of the Board of Education, Whitehall, London, S.W. Prisoners are invited to state as precisely as possible on a form (which can be had gratis on application) what kind of books they desire. The evidence that has already reached this country shows that it is necessary to provide not merely physical, but also mental, sustenance for British prisoners during their confinement, and this the above educational book scheme aims at doing. Offers of suitable books for

the latter will be gladly received by Mr. Davies, but they should be accompanied by a submission of the list of books proposed to be contributed.

THE Blue Ribbon of the Pharmaceutical Society, the highest award available for its students, has this year been assigned to Dorothy Alice Bills, of Stourbridge. The scholarship was established in 1861, and this is the first time a woman has gained it.

THE Head Master of Rugby, Dr. A. A. David, has offered the services of scholars, to help with harvest and other farm work, to the Midland Farmers' Association and the Rugby and Dunchurch Agricultural Association. Boys of sixteen and a half to eighteen years old will be sent in gangs, under a captain, to toss hay, thin mangolds, hoe, weed, and so forth.

CO-EDUCATION.—The City Corporation have adopted the co-education system at the Freeman's Orphan School, Brixton, where boys and girls are being taught together in the same classes, according to their ages. Thirty orphans of citizens who have fallen in the War have recently been admitted to the school.

JOHN SPENCER CURWEN.—By the death of Mr. John Spencer Curwen the Tonic Sol-fa Association loses its President. Mr. Curwen was born in 1847, and in 1880 became Principal of the Tonic Sol-fa College, which his father had founded in 1869. He held this office till 1911, but still remained President of the Association. He was also editor of the *Musical Herald*, was the founder of the Stratford Musical Festival in the early eighties, and had a good deal to do with the recognition which festivals have since obtained. Mr. Curwen wrote many books on the Sol-fa system, as well as a biography of his father. His widow is also a writer of books on musical subjects, the best known of which is *The Child Pianist*.

ROLL OF HONOUR.—Captain B. L. Fenton, Dorset Regiment, Assistant Master at King's School, Worcester, and first Commanding Officer of the Officers' Training Corps there; Captain C. J. S. Wright, Leicestershire Regiment, Assistant Master at Earleywood School, Ascot; Lieutenant R. J. E. Tiddy, Oxford and Bucks Light Infantry, Fellow Trinity College, Oxford, Lecturer in Classics, and University Lecturer in English; Lieutenant L. P. Abbott, Leicestershire Regiment, Assistant Master at Bramcote School, Scarborough; Lieutenant R. G. Scrase, Gloucestershire Regiment, Assistant Master at St. Michael's, Westgate-on-Sea; Lieutenant L. W. Hunter, Oxford and Bucks Light Infantry, Derby Scholar 1909, Fellow and Lecturer of New College, Oxford; Lieutenant S. B. McLaren, M.A. Cantab., Signal Officer, Royal Engineers, Professor of Mathematics, University College, Reading; Second Lieutenant P. Newbold, West Kent Regiment, sometime Lecturer in Classics at Armstrong College, Newcastle; Second Lieutenant B. A. Whitley, Royal Scots, Assistant Master at Loretto School.

REGULATIONS FOR TECHNICAL SCHOOLS, 1916-17.—The Board of Education issued on August 11, Circular 961, containing the Regulations for Technical Schools, &c., in England and Wales for the year 1916-17. Subject to certain alterations the Regulations are continued 'as last year. The main changes are that special grants in aid of instruction for men in the Army are withdrawn owing to the small demand now existing for camp classes of a special kind. Schools of art are to receive an inclusive annual grant, assessed by the Board after consideration of the volume, character, cost, and merit of the work done in the school, and of the efficiency with which the work is organized and co-ordinated with that of other schools and classes in the locality. The grant may also cover the work of a junior department (full-time or part-time) attached to the school. In addition to the work done in art subjects, the Board may take into account instruction in subjects of general education forming part of the junior course, and instruction in literary or pedagogic subjects, forming part of an organized course specially approved by the Board for students of suitable types in the school of art proper. This last provision seems designed to encourage the training of teachers of art, and a similar provision will be found in a new footnote to Article I of Part V, having reference to training courses for teachers of domestic subjects.

CORRESPONDENCE.

COMPULSORY LATIN AT PUBLIC SCHOOLS.

To the Editor of The Journal of Education.

SIR,—I have missed in the *Journal* any notice of the "Common Entrance Examination," the operation of which has been treated in a series of articles in the *Preparatory Schools Review*. Yet in view of imminent changes nothing could be more instructive than the notes contributed by the fourteen head masters of the schools concerned.

With your leave I will summarize the most important, and append a general comment.

Eton took this year for the first time the English paper, and the Head Master announced that the paper would be treated as of equal importance with such subjects as Mathematics and French. "Where a boy's performance in Latin makes his place doubtful, good work in English would decide the point in his favour." History and Geography count only in cases where Greek and Latin work does not allow of a clear decision. Latin verse is expected of boys who otherwise reach the standard of the Upper Fourth.

At Rugby, boys are placed by general impression, and Dr. David is the most pronounced of the reformers. "There is no subject or kind of work in which the fruits of regular practice in reading English books and in writing English Composition do not declare themselves," but the results of such teaching cannot be adequately expressed in terms of marks. Knowledge of facts is easily tested, but the far more valuable power of dealing with such knowledge—intelligence, mental alertness, imagination, and power of expression—cannot be separately marked.

At Harrow and Wellington College, as at Rugby, the highest marks are assigned to English; but in all the fourteen schools Latin still continues the *unum necessarium*, and for the boy who takes up only English, Natural Science, Mathematics, and a modern language there is at present no place in an English public school. Yet few will deny that such a curriculum provides the elements of a liberal education, and if, as the most enlightened of our head masters now acknowledge, the study of Greek may with profit be postponed to the age of fifteen or sixteen, there can be good cause for compelling *all* preparatory masters to teach Latin to boys of eleven or twelve. Heine is a flagrant example of the effects of premature and compulsory Latin.—Yours, &c., S.

THE MATTHAY METHOD.

To the Editor of The Journal of Education.

DEAR SIR,—May I appeal through your journal to my fellow Head Mistresses to reconsider the attitude that they are taking up towards the Matthay method of music teaching? I have reason to believe that we are making ourselves ridiculous in the eyes of genuine musicians by insisting that teachers should use that method. In advertisements and in notices of vacancies sent out by scholastic agents the words constantly occur, "Music Mistress required (Matthay method preferred)"; and teachers are beginning to think that they cannot get posts without it.

Many Head Mistresses have not much knowledge of piano-forte teaching, and that is probably the reason for this extraordinary run upon a method which to many well trained musicians is merely artificial and cramping. Individual teachers may find it useful, but it seems to me that, in regarding the Matthay method as essential to the equipment of a good teacher, Head Mistresses are doing a serious injury to the art of music.—Faithfully yours,

M. S.

UNIVERSITIES AND SCHOOLS.

WALES.

The Central Welsh Board have, we understand, been invited to give evidence before the Royal Commission on University Education, but it is probable that no reference will be made before the Commission to the constitutional questions discussed in the pamphlet *Wales and To-morrow*. It is not within the powers of the Commission to pronounce an opinion or make any recommendations as to the constitution of any education authority except the University. But there are many other points of great importance which the Commission can properly deal with, and on these questions the Central Welsh Board, as the authority controlling secondary education in Wales, can throw much light, as it alone possesses the necessary information. Such questions are—the character of the University Matriculation, the recognition of the Higher Certificate of the Central Welsh Board by the University, the age of entrance to the University, &c. A satisfactory solution of these and similar problems would tend to simplify our educational system, and, by drawing closer the links connecting the intermediate schools and the University, strengthen the latter and make it more truly national.

There is a sharp division of opinion among the leading denominations in Wales as to whether a Chair of Theology should be established in the University. Hitherto, each denomination has its own colleges and appoints its own professors, though the University examines its students for the B.A., B.D. degrees. The college, however, is recognized by the University unless it has three professors at least, so as to guarantee that the teaching staff is adequate. The North Wales Association of the Calvinistic Methodists, as well as one or two other religious bodies, have now passed a resolution in favour of transferring the teaching of Theology altogether to the University, free of all denominational control. The South Wales Association, on the other hand, have pronounced very decidedly against the proposed change, because they are of opinion that they are the natural and rightful guardians of the religious tenets of their ministerial probationers. There the question at present stands, and it is for the Commission to solve it.

A special meeting of the University Court will be held in September to consider fully and finally the nature of the evidence which it will submit before the University Commission.

Apart from the usual statistical information, the most interesting paragraphs in this report are those relating to the use of libraries in the schools. The Welsh Department deplores the fact that in twenty-two schools the number of Welsh books—fiction

or other—is lamentably small, and most people will be disposed to agree that it is not fair to the pupils to deprive them of all literature relating to their native country. But, on the other hand, in fairness to these schools it should be stated that it is far from easy to make a selection of Welsh books which are really suitable for a school library. There is very little fiction in Wales, and modern Welsh literature is chiefly of the biographical or theological character and therefore of no great interest to school boys. Most school libraries, we imagine, contain copies of some of the standard Welsh books, such as *Bardd Cwse*, &c., but it is only the select few who will peruse them, and that but rarely. Could not the Department, now that it has drawn attention to this defect in our libraries, go a step further and issue a list, say, of a hundred Welsh books—not reference books—which the average pupil can read and enjoy? Criticism is useful, but much more good can be done by supplying the schools with a list of this kind. The Department can easily secure the services of an expert for the purpose, but he must not overburden his list with too many of the classics, or—we may as well face the truth squarely—the books will not be read by the average pupil.

WOMEN'S WORK ON THE LAND.—The Women's National Land Service Corps is appealing for recruits for work on the land. Educated women to the number of at least a thousand are wanted at once to take service for the period of the War. The work includes the ordinary duties of a farm, and untrained women may have a course of instruction covering six weeks on payment of a small fee for maintenance. The Corps is recognized by the Government as the central voluntary body for recruiting women of the professional and leisured classes for work on farms.

REVIEWS AND MINOR NOTICES.

"Oxford Classical Texts."—P. OVIDI NASONIS: *Tristium Libri V; Ibis; Ex Ponto, Libri IV; Halieuticon Fragmentum*. Recognovit brevique adnotatione critica instruxit S. G. OWEN. (3s. net.)

The name of Mr. S. G. Owen is well known to the public as that of a scholar who has devoted much time and attention to the ascertainment of the text and the manuscript tradition of the later poems of Ovid, and more than three-quarters of the present volume consists of works that he has edited before. In 1889 he published a large critical edition of the *Tristia*, which will not be superseded by the text and critical apparatus now under review; and five years later a revised text of this with abbreviated notes, together with an edition of the *Epistles from Pontus*, appeared in the new *Corpus Poetarum Latinorum*. Both of these were reprinted, so far as the text was concerned, in the third volume of the pocket *Ovid*, which the publishers of the *Corpus* issued in 1898.

The MS. basis of Mr. Owen's text of the *Tristia* is the same as before, with two interesting, though inconsiderable, accessions. An inscription has been observed from which we can restore a line corrupted, and corrupted in exactly the same way, in every one of our extant manuscripts, which at I, 11, 12 give "omnis ab hac cura mens relevata mea est," when Ovid wrote, and the inscription records, "ab hac cura relevata." The other is the *Fragmenta Trevirensia*, discovered by Herr R. Ehwald, which consist of only four pages, including about 120 lines from Books I and IV. The discovery does not affect the current text, though some accepted readings are now better supported than they were, and Mr. Owen has the gratification of recording that his conjecture at IV, 4, 85, "aque" for "atque," is now confirmed by external authority. The text of this edition does not differ materially from that of the last. The changes are in most cases improvements, e.g. I, 4, 9, "pulsu" for earlier "pulsi"; II, 16, "ista" for "icta"; 237, "mirer" for "miror"; V, 8, 32, "isse diem" for "esse diem"; the substitution of "sermoni deficiente die" for "sermonem d. d." in V, 13, 28 is more dubious. A certain number of readings are retained which should have been abandoned by this time. I, 1, 26, "maior" (read "peior"), ib. 47, "circumspice" ("circumice," Heinsius); ib. 124, "tardae . . . morae" is surely better than "tardae . . . viae," to which it would easily be corrupted; at III, 7, 13, "facie" seems required instead of "fatis," but it is not even mentioned. So "liquidus" of the Danube after a thaw, in III, 10, 8, "ille suis liquidis bella repellit aquis." And "tulit," not "tibi," is demanded in III, 8, 12; for the point is not that aviation would never be possible for Ovid, but that it was, and would remain, a mere chimera. Mr. Owen fights shy of the obelus, which is not once employed in his *Tristia* or *Epistulae ex Ponto*. So the reader is left without notice to wrestle with such puzzles as II, 495 seq.: "denique nec video tot de scribentibus unum | quem sua perdidit Musa, repertus ego." The following misprints may give trouble: II, 542, "praeterit" for "praeterii"; IV, 4, 4, "numeris" for "nervis." The authority for "Oresta," I, 5, 22, should be stated in the note, and at II, 472, Bentley's "erat" should certainly be mentioned.

We find more additions to the critical apparatus of the *Ex Ponto* Epistles; but this increase has not been attended by a corresponding improvement in the text. This is due, in part at least, to the influence, traceable also in Mr. Owen's recension of the *Tristia*, of the German critic already mentioned. At I, 3, 85 seq., Mr. Owen had previously given us "quo magis ignoscat sapientia vestra dolenti qui facit ex dictis non ita multa tuis"; but now at the bidding of "Ehwald Kr. B., page 53," he returns to the corruption of the manuscripts and writes, "dolenti: quae facit ex dictis, non ita multa, tuis." We might expect a sentence thus appended to give a reason why Ovid should be excused by his more philosophic friends for disregarding advice; but we are told that it is to mean

"the matters in which your friend does not follow your advice are not so very numerous." Again, in II, 7, 23 *seq.*, Mr. Owen, deserting a lection which, if not correct, was at any rate intelligible, now presents, "crede mihi, si sum veri tibi cognitus oris (nec planis nostris casibus esse puter)," from which we are to extract (if we can) the sense "etsi manifesti sint casus mei, esse veri oris non puter." At I, 7, 57-58, Mr. Owen has not only received the Ehwaldian invention into his text, but has now suppressed the only emendation, that of Korn, "nescit" for "sensit" in 57, which gives a reasonable sense. There is certainly bettering here and there: II, 3, 96, "precor" for "precor"; *ib.* 9, 37, "fac prosis intra"; *ib.* 10, 45, "quidem" for "equidem"; III, 1, 104, "ministrat" for "ministret"; *ib.* 4, 10, "quamlibet" for "quemlibet"; *ib.* 27, "mentis" for "gentis." But we must add on the other side, I, 5, 79, "calidae . . . Syenae" for "calida . . . Syene"; 7, 66, where an emendation of Dr. Purser's has been improved away; III, 2, 83, where Heinsius is now abandoned for Ehwald; IV, 6, 12, "fuero" for "fuerim"; and *ib.* 9, 115, "ara" for "ora." The treatment of III, 9, 23-26 is particularly curious. The sense of these lines is that, "though correction is as less difficult than composition as Aristarchus is inferior to Homer, yet it checks the flow and force of the composer." For "et" or "at" in 23, Mr. Owen rightly reads "ut" ("while"), but refuses the "minus ardua" for "magis ardua" which that "ut" requires.

In editing the *Ibis* Mr. Owen has had two eminent predecessors, the late Prof. Ellis in his learned and elaborate edition of 1881, and Prof. Housman in the Corpus collection and the separate reprint of Ovid already referred to. Mr. Owen's text lies between the two, but somewhat nearer to the latter, and may, on the whole, be commended. His emendation of 289 "parum immitis" for "mitis," with its reference to the "philanthropy" of Prometheus, which was the cause of his troubles, is undeniably attractive; it, along with other suggestions which appear in this volume, is defended in the *Classical Quarterly* for 1915. In 416 his "vae tibi talis" is further away from the MSS. than Housman's "spe tibi maior," which is not mentioned; but the passage should be obelized. In 432 he reads, against Ellis, the impossible "Tereides," and at 605 accepts from Ellis the wholly unconvincing conjecture published in Vol. XXIII (not "XXXIII") of the *American Journal of Philology*, "Prataliden . . . Lycastum."

An editor of the fragment of the *Halieutica* has little to do. As Mr. Owen is aware, the text depends on a single codex at Vienna, of which that at Paris is a copy, whose readings might therefore have been suppressed except where they present an emendation. Its correction, so far as correction is possible, was all but completed by its discoverer, Sannazarius. Mr. Owen contributes two uncertain emendations, of 17-18 "ligati tutor" for "ita uber," and "gentis" for "mentis" in 51. His chief interest is in the authorship of the fragment which, with others, he believes to be Ovidian because Pliny believed it. In line 52 he apparently takes "ipsa" with "natura," but a neuter plural, referring to predatory "animalia," is required to balance the description of the fugacious class ("altera pars") in 63 and following lines.

The utility of the book is much increased by a full collection of the remains of non-extant works of Ovid and an index of proper names which includes those alluded to as well as those specifically mentioned. It is needless to say that the University Press has done its work well; but one modification should be made in future editions, and, indeed, in all other similar volumes to be issued in the series. The number of the poem as well as that of the book should be given in the head lines of the pages. Through lack of this a reader will waste an appreciable amount of time in finding his place. As a whole, the volume may be recommended to the classical public as filling a gap, and, if its editor will in future issues deal with the textual problems with a little more robustness, there is no reason for supposing that it will have serious competitors for a good while to come.

The National History of France: the Eighteenth Century. By CASIMIR STRYIENSKI. Translated by H. N. DICKINSON. (7s. 6d. Heinemann.)

This is a delightful book, brightly written and full of word-portraits of the men and women of the time. The foreign relations of France are dealt with rather slightly; indeed, we fear that English readers who do not already know the part that France played in the affairs of Europe during the century may find it hard to gain a clear idea of it from what M. Stryienski tells them—not that he has not recorded the more important facts which bear upon it, but because this side of his work is in some degree overwhelmed by a more alluring mass of personal details. It must, however, be remembered that the series of which this volume forms a part is not intended to teach the rudiments of French history, the French, for whom it is primarily written, being generally well instructed in them; and, further, that in the period it covers the influence of the character and conduct of a large number of persons on the progress of events is remarkably evident. The fortunes of the kingdom were no longer decided by a king with the will and the power to rule; they fell into the hands of others—statesmen, politicians, and women—and their different aims, the means by which they sought to gain them, and their successes or failures become the keys to no small part of the history. This volume, which begins with the accession of Louis XV, ends with the assembling of the States-Général, the beginning of a new era. No other arrangement was possible: the revolutionary period could not have been treated satisfactorily otherwise than as a whole, ending with a Consulate. At the same time we are not allowed to forget the influence on the future of what we are told here; we are constantly called upon to mark the gathering of the storm-clouds.

Among M. Stryienski's many excellent studies of character we would especially invite attention to those on Louis XV, whose idleness and levity may in part be accounted for, though not excused, by his deplorable education; his queen Marie, a pathetic and lonely figure, a thoroughly good woman, incapable of making the most of such small opportunities as she had, either of improving her own position or gaining influence over her husband, the Regent, the Duc d'Orléans, whose political ability is too often forgotten amid legends of debauchery; Mme de Pompadour, at heart a patriot, yet for nearly a quarter of a century using her power in a way that was harmful to France; and Marie Antoinette, who, meeting with coldness from the ladies of her husband's family, chose friends for herself—and chose them badly. Of the intrigues carried out by these friends of the queen, the most mischievous was that against Turgot, a Minister of the strictest integrity, "perhaps the only Minister who could have saved the monarchy," but, unfortunately, too uncompromising to be a successful reformer in the face of the strong opposition to reform presented by those whose interests were threatened by it, by the privileged classes jealous of their prerogatives, and even by a "bourgeoise aristocracy" alarmed by his proposal to impose a tax on all proprietors, whether privileged or not.

In speaking of the foreign policy of Fleury, M. Stryienski maintains that he had too blind a confidence in Walpole, who used the good relations existing between them as an opportunity for paralysing the commerce and sea power of France. It should, however, be remembered that during Fleury's ministry the French East India Company was extremely prosperous, and that in the West the seaports of France carried on an active and lucrative trade with America and the Antilles. It was a time of commercial and industrial development, though the profits did not reach the working class, and there was much misery among the poor. The Navy, it is true, was neglected, for Fleury's interests were centred on the Continent, when he sought to strengthen France by an alliance between Bourbon princes. He was successful in gaining an alliance with Spain, "the Family Compact" of 1733, and he secured the throne of the Two Sicilies for a Spanish Bourbon. Nor was he always faithful

to Walpole, for he secretly entered into an agreement with Spain, directed against English commerce. M. Stryienski points out that the unpopularity of Louis may be dated from the Peace of Aix-la-Chapelle, which, in spite of the victorious campaign in the Netherlands, brought France a poor return for all her exertions; yet, while its terms excited the angry scorn of the people, peace on some conditions was generally desired, for the expenses of the war were grievous. By that time the reign of Mme de Pompadour had begun, and her amazing extravagance increased the King's unpopularity. Ministers were made and disgraced as she willed; Machault and d'Argenson, both men of great experience, were dismissed at a critical time when their services were especially needful, "in spite of the King and in spite of public opinion," at the demand of the mistress; her influence was successfully invoked by Kannitz, and Louis was persuaded to reverse the ancient policy of France by an alliance with Austria. The "Seven Years' War" left France "alone and impoverished, to contemplate the loss of her Army, her Navy, and her Colonial Empire."

Due prominence is given to the quarrels between Louis XV and the Parliament of Paris, the first arising from the enmity between the Church and the Jansenists, which was brought to a head by the refusal of the Ultramontanes, supported by the Archbishop of Paris, to administer the Sacraments to their opponents. The Parliament remonstrated and, insisting on the Gallican liberties, the King refused to listen, and finally ordered the Presidents and Councillors to leave Paris, and a kind of sham Parliament was set up. Matters became serious, and there were even suggestions of a convocation of the States-Général. Peace was, however, made, and the Parliament was recalled in 1754, but the fury of the opposition should be regarded as "a forecast of the Revolution." The second quarrel ended in the destruction of the ancient institution by the Chancellor Maupeou in 1771, and it was not revived until early in the reign of Louis XVI. The last section of the volume contains a review of the art and literature of the period. Watteau is worthily honoured as endowed with a true creative genius; he more or less inspired Lancret, Patu, Bouchard, and Fragonard, the greatest of his successors. Excellent notices are given of the works of the great pastellist La Tour and other portrait painters, and of Chardin, notable both for his purely artistic merits and as a recorder of humble life, and the sentimentalist Greuze, "the favourite of the Sunday public at the Louvre." So, too, we have short and well judged appreciations of the place held in French literature by each of the most famous writers of the period—Voltaire, Marivaux, Beaumarchais, Montesquieu, J.-J. Rousseau, and others; and an account of the Salons, an institution of which the origin is ascribed to the Duchesse du Maine.

The French Renaissance. By CHARLES SAROLEA, Belgian Consul in Edinburgh, LL.D. Montreal, &c. (5s. Allen & Unwin.)

The title of this book misdescribes its contents. It is a collection of short essays on various persons of mark in French history, political and literary, including two on M. Maeterlinck. Of these Montaigne is the only one who, either in date or in spirit, can be said to belong to the period of the French Renaissance. Probably the key to M. Sarolea's meaning in his strange choice of a title is to be found in his introduction, an ecstatic laudation of France and a vindication of her people against the unworthy depreciation of them more or less prevalent in England before the present War. Praise of France is always welcome to us, and especially so at this time, but if the qualities we admire in her people to-day are, as M. Sarolea says (and we heartily agree with him), "very old and very familiar," then the present time of suffering and splendid achievement is not so much one of new birth as of self-revelation. In any case, whatever may be the connexion in an author's mind between his book and its title, we hold that he has no right to choose a title which is likely to mislead the public. The essays are

agreeably written, and, as might be expected from their author, present us with the thoughts of a cultivated mind. Two or three are so short as to be disappointing, for they seem to leave their subjects inadequately treated. That on Marie Antoinette, for example, ends with the affair of the necklace; and another, excellent so far as it goes, on Flaubert, should have noticed his descriptive power, have pointed out his mastery of the fantastic element in literature, as exhibited in *La Tentation de St. Antoine*, and explained the reasons of the comparative failure of *L'Education Sentimentale* and *Bouvard et Pécuchet*.

His essay on Mme de Maintenon strikes us as superficial. It is perfectly true that she was not solely responsible for the revocation of the Edict of Nantes; Louis XIV would not have suffered dictation, and, as is observed here, his policy in the matter was universally popular among his non-Huguenot subjects, but her influence is implied by the way she couples together the progress of the King's salvation, about which he talked anxiously with her, and his repression of heresy. Moreover, as our readers will see if they consult M. Lavissee's *Histoire de France*, the assertion that she meddled neither in foreign nor domestic policy, and that her sole interests were in religious and educational matters is far too sweeping. M. Sarolea's indictment of Mirabeau as impotent in politics because he was an unprincipled adventurer has at least this much truth in it, that the great orator's lack of character made both the Assembly and the Court distrust him; but to have saved Louis and the French monarchy would have been beyond the power of any man, even though he combined Mirabeau's abilities with the purity of an angel.

An apparent desire to say something new and startling has more than once led M. Sarolea seriously astray. His attempt to prove a "fundamental analogy" between Montaigne and Nietzsche, supported as it is here by maintaining the existence of a "real and esoteric" Montaigne different from the calm and sage philosopher of the *Essays*, argues something like intellectual perversity. The contention that the true aspect of the Reign of Terror is that it was "an outburst of religious fanaticism" leaves out of account the influence exercised on the revolutionary government by the pressure of circumstances which led it to violate its own principles in order to ensure the complete triumph of those principles over domestic and foreign opposition. M. Sarolea's representation of Napoleon as a Socialist on the strength of the testamentary law of the Civil Code is even more unfortunate. Ignorance of the earlier history of French testamentary legislation has allowed him to contrast the clearness of sight with which Napoleon took the only effectual means of abolishing the landed aristocracy with the mistakes of the revolutionists, who tried in vain to do so by "confiscation and wholesale murder." Napoleon saw, we are told, that a "constructive revolution" could only be achieved by law, and only by a law "which would make no exception of persons." Now the law of January 6, 1794 (17 Nivôse, An. II), repealing a law of three months' earlier date, allowed a bequest of one-tenth only of a man's property if he had children, and provided that the remaining nine-tenths should be divided equally between them, with the thoroughly recognized purpose of splitting up great estates. So much for the blindness of the Convention which sought to do by violence what could only be accomplished by law. Bonaparte, as we prefer to call him at that date, and some others when engaged on the Code, proposed that a rich father should have an almost unlimited testamentary discretion, but that in the case of the poor such discretionary power should be withheld or severely restricted—a strange proposal to come from "the greatest practical socialist of all ages."

American University Progress. By JAMES H. BAKER. (4s. 6d. net. Longmans.)

We hardly look to an Emeritus President of a State University, with a long record of academic work behind him, for such freshness and vigour as one finds in this

book. Naturally its author has strong views on various points, but he is commendably fair in presenting the case of those with whom he does not agree. His work as Chairman of the Committee of the National Council of Education on Economy of Time in Education inevitably commits him to a fixed policy in the movement at present on foot in the States to shorten the total length of the school and University course by two years. To a practical people like the Americans there is something outrageous in the thought of a man studying up to the age of twenty-seven. The new proposal is: Elementary education, six to twelve; secondary education (two divisions, four and two years), twelve to eighteen; college, eighteen to twenty or sixteen to twenty; University (graduate school and professional schools), twenty to twenty-four. What is called the college period takes up what roughly corresponds to our B.A. course. It belongs partly to the secondary course and partly to the preparatory course at a University.

A great part of the value of this book is to be found in the analysis of the meaning attached in America to the terms "College" and "University." It is not a matter of mere words. Underlying the discussion are important principles. To the treatment of this subject Dr. Baker brings knowledge of European ideas and intelligent sympathy with them. On one occasion he declared to the present reviewer that an American could sit at the high table at any college in Oxford or Cambridge and claim to sit there by right of intellectual descent. It is not surprising, therefore, to find that he gives fair play to the ideals of the older Universities. Though he admits that Oxford would be all the better for a little Americanizing—and he claims that such an innovation would receive a certain welcome from within—he does full justice to the special merits of our English and Continental ideals. It is significant that he thinks it necessary to make the remark, "The European University is free." The criticism of the American conception of a University he puts into the words of others:

Elsewhere throughout the world the University is a republic of scholars; here it is a business corporation. The American University has become an autocracy, wholly foreign in spirit and plan to our political ideals. . . . The President is a deified monarch raised to a sort of Imperial throne. He is not a leader, but a boss; we have the departments-store system of sub-bosses—deans, heads of departments, presidential committees; we have professors appointed by, with salaries determined by, and on occasion dismissed by, the President—all subject to him and dependent on his favour.

In his comments on these and similar criticisms, Dr. Baker takes the line that democracy is seeking efficiency, and is more and more inclined to seek out qualified experts and to commit to them a sort of dictatorship. One must not yield to the temptation to make the obvious remark, "There speaks the old President," for Dr. Baker shows such a genuine understanding of the professorial point of view that, even if he has been a "boss" during his control of his University, he has earned the right to pose as an unbiased judge.

One of the most striking features of the development of University work in America is the establishment and growth of associations representing different interests. The oldest of these is the National Association of State Universities. To balance this was established the Association of American Universities, in which the great historical institutions banded themselves together along with some of the more powerful State Universities. It is only natural that what Lord Haldane has called the Civic Universities should look after their claims; so, in 1914, was founded the Association of Urban Universities. Last year two associations were added to the list—the Association of American Colleges and the American Association of University Professors. One of the most suggestive of these associations is the Committee on Academic Freedom. It is in the light of the existence of such a committee that we should regard the statement in the text that European Universities are free.

That curious feeling after centralization that is appearing

in American educational writings is exemplified in the section Dr. Baker devotes to the idea of a national University. From the time of George Washington the ambition to have in the capital of the Republic a great central institution of learning has attracted the popular mind. At present the idea appears to be getting into practical shape, and a Bill was presented on the subject last session. Dr. Baker is, on the whole, in favour of such a national University, and actually quotes our English Board of Education's "scheme for the organization and development of scientific and industrial research" as an example of the sort of work such a University could undertake. On this side of the Atlantic we are not so sure about the benefits of centralization. Like ourselves, the Americans are at present feeling their way in this matter of University reform—a fact which is well brought out in Appendix B in Dr. Baker's book. From this we learn that one of the main sources of his information was a circular of inquiry that he issued to a large number of representative institutions. The replies are not particularly well collated. From them, however, one can gather first that there is a considerable diversity of opinion on most of the points raised, and secondly that the opinions expressed may be very easily arranged under definite categories. Such an arrangement would greatly increase the value of Dr. Baker's contribution, particularly if it were made to include references to the types of institutions from which the replies come.

Readings in Vocational Guidance. Edited by MEYER BLOOMFIELD. (10s. 6d. Ginn.)

Although compiled by an American, and primarily intended for American readers, this volume, consisting of a series of essays bearing upon the conditions and choice of employments for the youth of both sexes, will furnish guidance and direction to members of care committees and teachers and social workers generally in this country. Each paper is written by an expert, who, in addition to having made a particular study of the special subject treated, has, by virtue of his position as teacher or professor, or institutional superintendent, a close practical knowledge of the conditions and the human element concerned. The advantage of this method is to be found in the preservation of a living, personal element, in place of the non-committal statistical tables and abstract documents so dear to the hearts of many of our own social reformers.

It must not be deduced from this that the volume under discussion is wanting in precise data and detailed statistics. On the contrary, great space is assigned to classified tables, with an abundance of detail in the different occupations of boys and girls under the varying aspects of ages, earnings, modes of living, relations to their parents, health, amusements. There is a good deal of repetition, which in subsequent editions might well be eliminated to the great gain of the book and to the advantage of the busy student, who will have to do a considerable amount of winnowing in order to separate the significant from the non-essential.

With this object we will indicate the chapters that seem to us most worthy of study. Amongst the more valuable of the sections are those devoted to the industry of girls whose ages range from fourteen to sixteen. A number of most important conclusions are reached with complete unanimity by the investigators, who have done their work with great impartiality and thoroughness; and, as they apply with a little modification to the conditions of girl industry in this country, they afford most striking confirmation of the views of those who are opposed to any extension of the employment of girls in the industrial arena. The main features of the situation as regards girls may be thus summed up: most of the jobs secured belong to the low-grade industries; a limit is soon reached in wages; finding another job is sometimes the only way to secure more pay; promotion is largely a matter of chance, there being no observable economic advantage in leaving school at a higher age than fourteen and a higher grade of school, or in previous experience of other jobs of the character accessible to girls of the

neighbourhood. In addition to these definite conclusions, the writers add various other factors bearing upon the lives and characters of these girl workers, and show how the conditions, frequent periods of unemployment, constant change of situation, the non-formation of habits of efficiency, and the lack of steady progress in skill, all contribute to a result of a most disastrous kind from the standpoint of the educationist no less than the economist, proving "that the community may not safely surrender the training of children during the formative periods of their lives to the factory, the store, the saloon, the messenger service, or to the business office."

The recommendations helping towards the solution of this problem are of a three-fold nature: the improvement and scope of the school; the raising of the family income so as to make longer school attendance possible; the institution of a vocational guidance program. The latter includes the presence in each public school of a properly qualified person who will give his time and energy to this important work. Such an instructed, liberally educated, and sympathetic man or woman, acting on the lines suggested in this report, would have a wide reaching area of influence and might effect immense changes for good. Space precludes our dealing at greater length with this interesting and valuable book, which we specially recommend to the attention of members of care committees.

THEOLOGY.

Anselm. By E. M. WILMOT-BUXTON. With nine illustrations by MORRIS MEREDITH WILLIAMS. (1s. net. Harrap.)

Popular studies of great historical personages, such as those included in Messrs. Harrap's "Heroes of all Time" series, are to be welcomed by teachers. They are calculated to bring home to the young mind, in a vivid and arresting way, the colour and movement of actual history. The present study carries out this plan in an interesting and useful way. In a series of nineteen short chapters the author traces the wonderful career of Anselm, and brings out the movements and life of the times in which he lived. The monastic and ecclesiastical life is well sketched, as well as the political conditions. The book, which is well printed and remarkably cheap, is furnished with some good illustrations.

Biblical Discoveries in Egypt, Palestine, and Mesopotamia. By the Rev. J. POLITEYAN, B.A. (2s. 6d. net. Elliot Stock.)

This volume, embodying some lectures given at a Summer School in 1914, surveys in a picturesque way some of the more important discoveries in Eastern lands that illustrate the historical background of the Bible narrative. The author, himself of Oriental birth, discusses these in an interesting and popular manner. He is familiar with Eastern life and habits of thought. Modern criticism appears to him to be largely due to defective acquaintance with the Oriental way of looking at and expressing things. The author appears in this respect to be as one-sided as some of the votaries of extreme literary criticism, who certainly have no feeling for things Eastern. It is possible, however, to harmonize criticism and archaeology. There are some good illustrations.

CLASSICS.

The Clouds of Aristophanes. With Translation, Introduction, and Commentary by BENJAMIN BICKLEY ROGERS. (10s. 6d. G. Bell.)

It is nearly sixty years since Mr. Rogers began his lifelong work of translating and editing Aristophanes with this the most popular of his plays, and he concludes his labours (like his great original) with a second edition. The translation, which formed a landmark in the art, is virtually unchanged and remains without rival if we except the acting edition of Messrs. Godley and C. Bailey. In the revised introduction, Mr. Rogers seeks to explain why, for the Oxford performance of the *Clouds*, Socrates is chosen as the special butt of the comedy. It seems to us sufficient explanation to say that Aristophanes was an out-and-out Conservative, and, though the same might be said of Socrates, to his countrymen he appeared as a Radical.

EDUCATION.

The Essentials of Teaching. A Book for Amateurs. By T. J. BURNETT. (3s. 6d. net. Longmans.)

Mr. Burnett is a master of method under the Edinburgh School Board, and these lectures are addressed to amateurs or untrained teachers engaged in the vocational work of continuation classes. The author is fully aware that such teachers can be looked on only

as a stop-gap, and that the instructor in carpentry or metal work requires training no less than the regular primary teacher. Mr. Burnett is a thoroughgoing Herbartian, and we have here an exposition of the "Five Steps," with practical deductions. We may doubt how many of the amateur teachers will be capable of digesting Herbart even when specially prepared for them. Much more to the purpose are the mistakes in questioning here commented on. It seems, however, a pity that most of the errors here pointed out are drawn from the English lesson. Such questions, again, as the relations of Church and State are really foreign to the writer's brief and need not trouble the teachers here concerned, but there is much on the theory of education that both primary and secondary teachers might well lay to heart.

ENGLISH.

Shakespeare's King Henry V. Edited, with Introduction, Notes, Hints, and Questions, by S. P. B. MAIS, M.A. With Illustrations by BYAM SHAW. (Bell.)

Whilst the format of this book is all that we expect from the publishers, we must take exception to the tone of many of the notes. They lack that judicial, unbiased attitude that we expect from a scholar and an editor.

Phonic Plays for Infants and Juniors. By ELEANOR I. CHAMBERS. (2s. 6d. Blackie.)

A set of bright little plays, interspersed with music, in which a systematic phonic method of teaching reading and word-building is most ingeniously employed. The author is an experienced teacher, and has done her work carefully and cleverly.

Children's Cameos of Poetry and Prose. Patriotic and National. (Paper, 4d.; cloth, 5d. Philip.)

This new selection is supplementary to the volumes that have already appeared, and is an extremely well compiled anthology, giving, in addition to the immortals, many modern writers and poets, amongst others Bret Harte, with his fine *A Call to Arms*, Alfred Noyes, and F. H. Doyle.

"Cassell's Modern School Series."—*Tales Old and New.* Book VI. (1s. 8d.)

This reader is an excellent one for the older scholar; and as teachers we feel there is not a single excerpt of which we can say its omission would improve the book. The selection has been done with unusual skill, and the child who has enjoyed, as he will if unspoiled, these fine passages from Ruskin, Milton, Lamb, Macaulay, and so forth, has had his feet set upon the right path. The black and white illustrations are good; less so the coloured ones.

The Winter's Tale. Edited by A. J. F. COLLINS, M.A. Oxon. (2s. Clive.)

The introduction, text, and notes in this edition are pre-eminently for the student, and achieve their purpose. Some of the notes, however, strike us as superfluous, as, for instance, "want" explained as "be without."

The Harrying of the Dove. A Masque. By ELSIE FOGERTY. (6d. Allen & Unwin.)

Miss Fogerty, so deservedly famous as an elocutionist, has succeeded in producing a pretty and "actable" little piece, which school children will like performing.

The Fairy Gold Series. (Dent.)

One of an attractively got-up series in stiff grey paper binding, containing the old nursery and folk stories, illustrated in black and white and in colour. The stories are told in the old familiar language, which in our opinion cannot be improved upon, and the point of novelty is to be found in the illustrations, particularly the coloured ones. Many of these are effective; others are more decorative than appropriate to the story. Take, for instance, the coloured illustration facing *Mercury and the Woodman*. Here the most striking object is an immense piece of scarlet drapery dotted with white, which Mercury holds in front of him, looking less like a garment than a curtain being held up by the shopwalker for the inspection of purchasers. It may be urged that children would not be so hypercritical. That may be so; but they are logical, and would surely ask why the "Stranger" did not take off his drapery before plunging into the bottom of the stream.

HISTORY.

The Deeper Causes of the War. By EMILE HOVELAQUE. Translated by the Author, with a Preface by Sir WALTER RALEIGH. (2s. 6d. net. Allen & Unwin.)

M. Hovelaque is well known to the professional public in England as one of the most cultured of French officials and as equally familiar with the language and literature of both countries. From his preface we gather that this brochure was published towards the end of 1914, and in the English edition no attempt has been made to bring the book up to date. Sir Walter Raleigh read

the original essays and commends them as the truest and most illuminative presentation of the ultimate causes of the War. We cannot go so far as this or hold that they are comparable to Baron von Hügel's *Soul of Germany*. The Germany with which we are warring dates from Frederick the Great and did not take form and shape and become a standing danger to European civilization till after the triumph of Bismarck and the unholy alliance of letters and philosophy with statecraft. We start, it is true, with Prussia and a theory of the race, but no racial theory will suffice to explain the domination of Prussia over the rest of Germany. The German nation is as mixed in its descent as is the English or the French, and the one explanation that will hold water is military success engineered by a genius hardly inferior to the first Napoleon. Scathing as is M. Hovelacque's denunciation of Treitschke and all his works, we miss the philosophic mind that sees beyond the recent dementia a Germany emerging, clothed and in its right mind, the Germany of Luther and Lessing, of Goethe and Schiller, of Bach and Beethoven, the Germany that we have not ceased to cherish and love. There are some careless blunders in the text—Masterton, page 127, and a double negative on page 128, and defective punctuation—that should have been corrected by the reader.

A Short History of Modern Europe from the French Revolution to the Great War. By EUGÈNE LEWIS HASLACK, B.A., F.R.Hist.S. (3s. University of London Press, Hodder & Stoughton.)

Among the standpoints from which the history of Europe since 1789 may be considered, Mr. Hasluck has chosen that of a philosophic historian, classing events with reference to the moral forces that produced, or at least contributed to produce, them. After pointing out the causes of the Revolution in France, where the Government had remained medieval in spirit while the nation had advanced to new needs and new ideals, he briefly traces its course and notes the aggressiveness of triumphant democracy and the other influences contributory to the revolutionary war, which, beginning as a crusade of the champions of liberty, became at last a struggle for European dominance under Napoleon. A chapter on the main epochs of the war ends by noting its effect in bringing about a change in political thought, leading statesmen to regard foreign affairs "from a general European as well as from a national and a personal point of view." A summary account of the social and political effects of the industrial revolution of the eighteenth century clears the ground for the principal divisions of Mr. Hasluck's work, which treats the history of Europe since 1815 in its relation to the development of democracy, to the spirit of nationalism, and, finally, to international rivalry. Two chapters are added—one on the affairs of the lesser States omitted in his sketch of the history of the Continent as a whole for the sake of clearness of treatment, the other on the attitude of Great Britain as an insular State towards European questions during the period under review. Although this plan prevents Mr. Hasluck from presenting events in strictly chronological order, his narrative is free from confusion and is well constructed and accurate. In a book designed for educational purposes it would perhaps have been wiser to record fewer facts and fewer names. But others may think differently, and in any case it not only conveys in a small compass a large amount of definite information, but it is distinctly educative in the best sense, for it will help a young reader to think for himself on the connexion and causes of events, and excite a desire to learn more about them. It should find a place in school libraries.

Outlines of European History, 1814-1914. By G. B. SMITH, M.A., Assistant Master at the Royal Naval College, Osborne. (2s. 6d. E. Arnold.)

Of the many books on European history during the last hundred years that have come to us of late this is perhaps the most suitable for use in schools—it does not attempt too much, and in what it does attempt it is thoroughly successful. Mr. Smith has treated his subject on a double plan, partly according to States and partly according to periods. After an introduction expounding and commenting on the principal points in the resettlement effected by the Congress of Vienna, he gives five chapters to the parts taken in European affairs from 1815 to 1848, by France, Holland and Belgium, the German States, Italy, and Russia, and one to the minor States. He then deals in separate chapters with the revolutionary period in France, Austria-Hungary, Germany, and Italy. His next four chapters bring us to the fall of the Second French Empire and contain a sketch of the Liberation and Union of Italy and the attainment of German unity, to which two chapters are devoted, the first of them ending with the exclusion of Austria from Germany in 1866 and the reconstitution of the Dual Monarchy; and the last six chapters, of which two are given to the history of the Balkan States, go down to the outbreak of the present War. His

standpoint, then, is not so much that of an historian viewing the history of Europe as a single, though highly complex, political entity as of one gazing first on one and then on another of its several parts and marking how the action of each determined not only its own position, but that of others. He exercises, on the whole, a wise discretion in avoiding to record facts and names that are not essential to his narrative, though here and there we think that a name such as the "Agreement of Olmütz" would help to fix a critical event in the mind of the student. His chapters are short and deal each one with a well defined subject; he writes clearly and states his opinions in moderate language. No summary can satisfy everyone, and it would be easy for those to whom the history of the period is familiar to pick holes in this book on the score of omissions or slightness of treatment, but taken as a whole it appears to us to be written with remarkably good judgment as regards both the selection and the arrangement of its matter.

The Yearbook of English History is a useful little volume just issued by the Yearbook Press. Produced on good writing paper, it has historical facts set out in columns under dates, with blank spaces left for the owner to fill in his own notes.

The Teaching of History in Elementary Schools. By R. L. ARCHER, L. D. OWEN, and A. E. CHAPMAN. (3s. 6d. Black.)

This is a fresh and interesting book. The passages upon stories, upon the art of selection, and upon the teaching of character are especially good. The first part sums up the general value of history in school in a clear and able way. The authors speak as though the "concentric" system always meant repetition of exactly the same story thrice, and never a scheme where the matter changes with the natural changes in children's interests. A fuller discussion would have been interesting. The book is admirably practical.

A Short History of English Rural Life. By M. FORDHAM. (2s. 6d. Allen & Unwin.)

This account covers the whole period from the Anglo-Saxon invasion to the present day. It is simply written, and increases in interest as it draws near to the twentieth century.

Patriotism and the Fellowship of Nations. By F. M. STAWELL. (1s. Dent.)

This book does not contain evidence enough for use in the teaching of upper standard children. It is too simple for anyone who understands the subjects handled; for minds at a more elementary stage the treatment seems too abstract; it is also somewhat superficial, as in the opening treatment of the "Growth of Law."

"Cambridge Industrial and Commercial Series."—(1) *Trade and Commerce.* By A. J. DICKS. (2) *Factories and Great Industries.* By F. A. FARRAR. (3) *Ships, Shipping, and Fishing.* By G. F. BOSWORTH. (Cambridge University Press.)

This series deals with the great practical interests of the modern world. These books may well be useful for reference. They are written somewhat baldly, and fail to show the meaning of facts or causation.

"Chambers's Periodic Histories."—Book IV, *England in the Middle Ages*, 1s. 6d.; Book V, *England under the Tudor and Stuart Kings*, 1s. 6d.; VI, *Britain in Modern Times*, 1s. 9d.

A clear chronological account; in the last book the last years of our history are treated more fully than usual.

The Progress to History. Stages I to VI. Edited by R. WILSON. (1s. to 2s. Macmillan.)

In this series, planned concentrically for use throughout the school, there is too much repetition in Books II and III. The pictures throughout are excellent. The material is interesting, especially in the later books, where the selections from authorities are useful and judiciously chosen. Book V treats colonial expansion very well. Parts of Books I and II seem too advanced for little children.

SOCIOLOGY.

"METHUEN'S HEALTH SERIES."

This series consists of a number of attractive monographs written by well known experts for the guidance of the general public. The price of each is 1s. net.

(1) *How to Live Long.* By J. WALTER CARR, M.D.

Careful living and prevention of disease are the key-notes of this suggestive volume. Dr. Carr has bravely tackled the question of venereal diseases, showing them to be a most important factor in shortening life and destroying the health of both body and soul. The chapters on the special risks of different ages, on food, drink, and exercise should be found most useful, not only as a basis of instruction for the young, but as helping older people to wiser modes of living.

(Continued on page 528.)

DENT'S NEW BOOKS.

Two New Books by
Professor WALTER RIPPMAUN, M.A.

FIRST STEPS IN FRENCH. Crown 8vo, Cloth, 2s.

An alternative to "Dent's First French Book," containing many new and improved features, and based upon **FOUR NEW WALL PICTURES** (price 4s. net). The first part of this book is also issued separately in **PHONETIC TRANSCRIPTION** (price 6d. net) and a *Teachers' Handbook*, **THE EARLY TEACHING OF FRENCH**, is also published (price 1s. 6d. net).

FURTHER STEPS IN FRENCH. Crown 8vo, Cloth, 2s.

This book completes the two years' course, of which "First Steps in French" was the first part, and lays a sure foundation in Vocabulary and Grammar. Both volumes have been illustrated by Mr. FRED TAYLOR.

PREMIÈRE GRAMMAIRE FRANCAISE.

By H. E. BERTHON, M.A., Taylorian Lecturer in French in the University of Oxford. Fcap. 8vo. Cloth. 2s.

A FRENCH NOTEBOOK. By C. E. HODGES, M.A. Fcap. 4to. 1s. 9d.
